

## Report on the RF Testing of:

JRC Mobility Inc.  
IT Controller, Model: JRN-430K  
FCC ID: 2AX5HJRN-430K

In accordance with FCC Part 27 Subpart C  
and FCC Part 27 Subpart H  
and FCC Part 27 Subpart L

Prepared for: JRC Mobility Inc.  
NAKANO CENTRAL PARK EAST,10-1, Nakano 4-  
chome, Nakano-ku, Tokyo 164-8570, Japan

Signatures in this approval box have checked this document in line with the requirements of TÜV SÜD Japan Ltd. document control rules.

### EXECUTIVE SUMMARY - Result: Complied

A sample(s) of this product was tested and the result above was confirmed in accordance with FCC Part 27 Subpart C and FCC Part 27 Subpart H and FCC Part 27 Subpart L.

### DISCLAIMER AND COPYRIGHT

The results in this report are applicable only to the equipment tested.  
This report shall not be re-produced except in full without the written approval of TÜV SÜD Japan Ltd.

### ACCREDITATION

This test report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the federal government.

**2.2 Modification to the EUT**

The table below details modifications made to the EUT during the test project.

| Modification State                  | Description of Modification  | Modification fitted by | Date of Modification |
|-------------------------------------|------------------------------|------------------------|----------------------|
| Model: JRN-430K, Serial Number: N/A |                              |                        |                      |
| 0                                   | As supplied by the applicant | Not Applicable         | Not Applicable       |

**2.3 Variation of family model(s)**

**2.3.1 List of family model(s)**

Not applicable

**2.3.2 Reason for selection of EUT**

Not applicable

## 2.4 Description of test mode

The EUT had been tested under operating condition.  
There are three channels have been tested as following:

| Band          | Modulation  | Bandwidth [MHz] | Channel             | Frequency [MHz]        |
|---------------|-------------|-----------------|---------------------|------------------------|
| WCDMA Band IV | QPSK        | -               | 1312, 1413, 1513    | 1712.4, 1732.6, 1752.6 |
|               | 16QAM       | -               | 1312, 1413, 1513    | 1712.4, 1732.6, 1752.6 |
| LTE Band IV   | QPSK, 16QAM | 1.4             | 19957, 20175, 20393 | 1710.7, 1732.5, 1754.3 |
|               |             | 3               | 19965, 20175, 20385 | 1711.5, 1732.5, 1753.5 |
|               |             | 5               | 19975, 20175, 20375 | 1712.5, 1732.5, 1752.5 |
|               |             | 10              | 20000, 20175, 20350 | 1715.0, 1732.5, 1750.0 |
|               |             | 15              | 20025, 20175, 20325 | 1717.5, 1732.5, 1747.5 |
|               |             | 20              | 20050, 20175, 20300 | 1720.0, 1732.5, 1745.0 |
| LTE Band XII  | QPSK, 16QAM | 1.4             | 23017, 23095, 23173 | 699.7, 707.5, 715.3    |
|               |             | 3               | 23025, 23095, 23165 | 700.5, 707.5, 714.5    |
|               |             | 5               | 23035, 23095, 23155 | 701.5, 707.5, 713.5    |
|               |             | 10              | 23060, 23095, 23130 | 704.0, 707.5, 711.0    |

The field strength of spurious emissions was measured at each position of all three axis X, Y and Z to compare the level, and the maximum noise.

The worst emission was found in X-axis (All Bands) and the worst case recorded.

Pre-scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports.

### 3 Configuration of Equipment

Numbers assigned to equipment on the diagram in “3.2 System configuration” correspond to the list in “3.1 Equipment used”.

This test configuration is based on the manufacture’s instruction.

Cabling and setup(s) were taken into consideration and test data was taken under worse case condition.

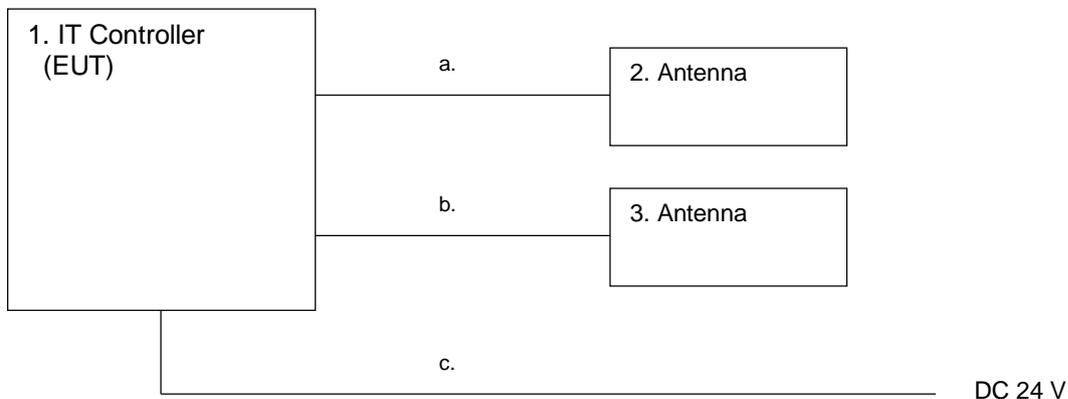

#### 3.1 Equipment used

| No. | Equipment     | Company        | Model No. | Serial No. | FCC ID/DoC    | Comment   |
|-----|---------------|----------------|-----------|------------|---------------|-----------|
| 1   | IT Controller | JRC Mobility   | JRN-430K  | N/A        | 2AX5HJRN-430K | EUT       |
| 2   | Antenna       | NIPPON ANTENNA | DP-BRO    | N/A        | -             | Accessory |
| 3   | Antenna       | NIPPON ANTENNA | DP-BRO    | N/A        | -             | Accessory |

#### 3.2 Cable(s) used

| No. | Equipment     | Length[m] | Shield | Connector | Comment |
|-----|---------------|-----------|--------|-----------|---------|
| a   | Antenna cable | 2.0       | Yes    | Metal     | -       |
| b   | Antenna cable | 2.0       | Yes    | Metal     | -       |
| c   | DC cable      | 2.0       | No     | Plastic   | -       |

#### 3.3 System configuration

## 4 Test Result

### 4.1 Effective Radiated Power

#### 4.1.1 Measurement procedure

##### [FCC 27.50]

##### <Step 1>

The EUT and support equipment are placed on a 1 meter x 1 meter surface, 0.8 meter (below or equal 1 GHz) and/or 1.5 meter (above 1 GHz) height styrene foam table. Radiated emission measurements are performed at 3 meter distance with the broadband antenna (Log periodic antenna). The antenna is positioned both the horizontal and vertical planes of polarization and height is varied 1 to 4 meters and stopped at height producing the maximum emission.

The bandwidth of the spectrum analyzer is set to 1 MHz. The turntable is rotated by 360 degrees and stopped at azimuth of producing the maximum emission.

##### <Step 2>

The substitution antenna is replaced by the transmitter antenna (EUT).

The frequency of the signal generator is adjusted to the measurement frequency.

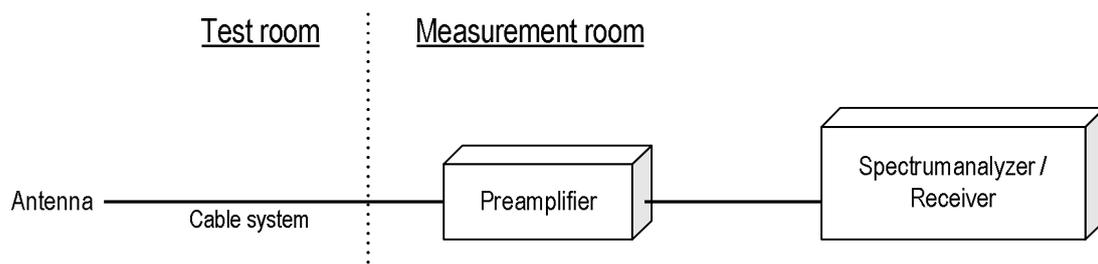

Level of the signal generator is adjusted to the level that is obtained from step 1, and record the emission level of signal generator.

The spectrum analyzer is set to;

- a) Span = 1.5 times the OBW
- b) RBW = 1-5% of the expected OBW, not to exceed 1 MHz
- c) VBW  $\geq 3 \times$  RBW
- d) Number of sweep points  $\geq 2 \times$  span / RBW
- e) Sweep time = auto-couple
- f) Detector = RMS (power averaging)
- g) If the EUT can be configured to transmit continuously (i.e., burst duty cycle  $\geq 98\%$ ), then set the trigger to free run.
- h) If the EUT cannot be configured to transmit continuously (i.e., burst duty cycle  $< 98\%$ ), then use a sweep trigger with the level set to enable triggering only on full power bursts and configure the EUT to transmit at full power for the entire duration of each sweep. Ensure that the sweep time is less than or equal to the transmission burst duration.
- i) Trace average at least 100 traces in power averaging (i.e., RMS) mode.
- j) Compute the power by integrating the spectrum across the OBW of the signal using the instrument's band power measurement function, with the band limits set equal to the OBW band edges.

If the instrument does not have a band power function, then sum the spectrum levels (in linear power units) at intervals equal to the RBW extending across the entire OBW of the spectrum.

- Test configuration

#### 4.1.2 Calculation method

Result (ERP) = S.G Reading - Cable loss + Antenna Gain  
 Margin = Limit – Result (ERP)

Example:

Limit @ 707.5 MHz : 34.7 dBm

Ant. Input = 33.3 dBm Cable loss = 0.7 dB Ant. Gain = -10.7 dBd

Result = 33.3 - 0.7 + (-10.7) = 21.9 dBm

Margin = 34.7 – 21.9= 12.8 dB

#### 4.1.3 Limit

3 W (34.7 dBm)

#### 4.1.4 Test data

## 4.2 Effective Isotropic Radiated Power

### 4.2.1 Measurement procedure

#### [FCC 27.50]

##### <Step 1>

The EUT and support equipment are placed on a 1 meter x 1 meter surface, 0.8 meter (below or equal 1 GHz) and/or 1.5 meter (above 1 GHz) height styrene foam table. Radiated emission measurements are performed at 3 meter distance with the broadband antenna (Log periodic antenna). The antenna is positioned both the horizontal and vertical planes of polarization and height is varied 1 to 4 meters and stopped at height producing the maximum emission.

The bandwidth of the spectrum analyzer is set to 1 MHz. The turntable is rotated by 360 degrees and stopped at azimuth of producing the maximum emission.

##### <Step 2>

The substitution antenna is replaced by the transmitter antenna (EUT).

The frequency of the signal generator is adjusted to the measurement frequency.

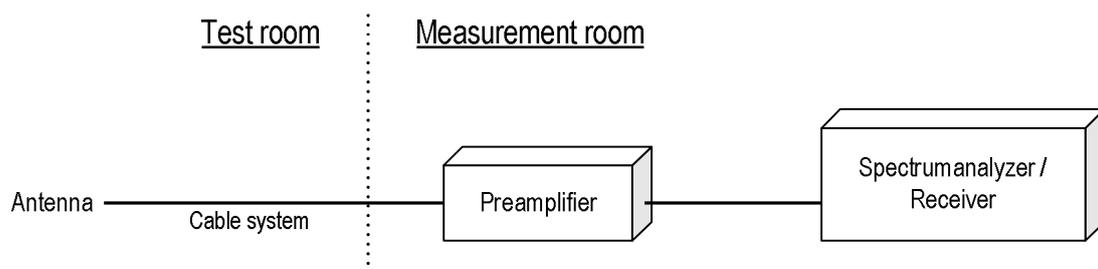

Level of the signal generator is adjusted to the level that is obtained from step 1, and record the emission level of signal generator.

The spectrum analyzer is set to;

- k) Span = 1.5 times the OBW
- l) RBW = 1-5% of the expected OBW, not to exceed 1 MHz
- m) VBW  $\geq 3 \times$  RBW
- n) Number of sweep points  $\geq 2 \times$  span / RBW
- o) Sweep time = auto-couple
- p) Detector = RMS (power averaging)
- q) If the EUT can be configured to transmit continuously (i.e., burst duty cycle  $\geq 98\%$ ), then set the trigger to free run.
- r) If the EUT cannot be configured to transmit continuously (i.e., burst duty cycle  $< 98\%$ ), then use a sweep trigger with the level set to enable triggering only on full power bursts and configure the EUT to transmit at full power for the entire duration of each sweep. Ensure that the sweep time is less than or equal to the transmission burst duration.
- s) Trace average at least 100 traces in power averaging (i.e., RMS) mode.
- t) Compute the power by integrating the spectrum across the OBW of the signal using the instrument's band power measurement function, with the band limits set equal to the OBW band edges.

If the instrument does not have a band power function, then sum the spectrum levels (in linear power units) at intervals equal to the RBW extending across the entire OBW of the spectrum.

#### - Test configuration

**4.2.2 Calculation method**

Result(EIRP) = Ant. Input - Cable loss + Antenna Gain  
 Margin = Limit – Result (EIRP)

Example:

Limit @ 1732.5 MHz : 30.0 dBm  
 Ant. Input = 19.3 dBm Cable loss = 1.1dB Ant. Gain = 8.3 dBi  
 Result = 19.3 - 1.1 + 8.3 = 26.5 dBm  
 Margin = 30.0 - 26.5 = 3.5 dB

**4.2.3 Limit**

1 W (30.0 dBm)

**4.2.4 Test data**

### 4.3 Radiated Emissions and Harmonic Emissions

#### 4.3.1 Measurement procedure

##### [FCC 27.53, 2.1053]

##### <Step 1>

The EUT and support equipment are placed on a 1 meter x 1 meter surface, 0.8 meter (below or equal 1 GHz) and/or 1.5 meter (above 1 GHz) height styrene foam table. Radiated emission measurements are performed at 3 meter distance with the broadband antenna (Biconical antenna, Log periodic antenna and double ridged guide antenna). The antenna is positioned both the horizontal and vertical planes of polarization and height is varied 1 to 4 meters and stopped at height producing the maximum emission.

The bandwidth of the spectrum analyzer is set to 1 MHz. The turntable is rotated by 360 degrees and stopped at azimuth of producing the maximum emission. The frequency is investigated up to 20GHz.

##### <Step 2>

The substitution antenna is replaced by the transmitter antenna (EUT).

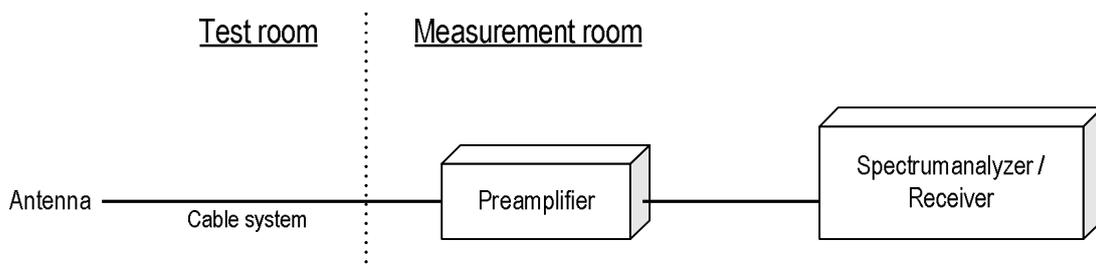

The frequency of the signal generator is adjusted to the measurement frequency.

Level of the signal generator is adjusted to the level that is obtained from step 1, and record the emission level of signal generator.

The spectrum analyzer is set to;

- RBW = 100 kHz for below 1GHz and 1MHz for above 1GHz / VBW  $\geq$  3 x RBW
- Detector = Peak
- Trace mode = Max hold
- Sweep time = auto-couple

- Test configuration

Japan

#### 4.3.2 Calculation method

Result (EIRP) = Ant. Input - Cable loss + Antenna Gain  
Margin = Limit - Result (EIRP)

Example:

Limit @ 3465.0 MHz : -13.0 dBm

Ant. Input = -50.7 dBm Cable loss = 1.6 dB Ant. Gain = 9.1 dBi

Result = -50.7 - 1.6 + 9.1 = -43.2 dBm

Margin = -13.0 - (-43.2) = 30.2 dB

#### 4.3.3 Limit

-13 dBm or less

**4.3.4 Test data**

## 5 Measurement Uncertainty

Expanded uncertainties stated are calculated with a coverage Factor  $k=2$ . Please note that these results are not taken into account when measurement uncertainty considerations contained in ETSI TR 100 028 Parts 1 and 2 determining compliance or non-compliance with test result.

| Test item                                  | Measurement uncertainty  |
|--|--------------------------|
| Conducted emission, AMN (9 kHz – 150 kHz)  | $\pm 3.7$ dB             |
| Conducted emission, AMN (150 kHz – 30 MHz) | $\pm 3.3$ dB             |
| Radiated emission (9kHz – 30 MHz)          | $\pm 3.7$ dB             |
| Radiated emission (30 MHz – 1000 MHz)      | $\pm 5.3$ dB             |
| Radiated emission (1 GHz – 6 GHz)          | $\pm 4.4$ dB             |
| Radiated emission (6 GHz – 18 GHz)         | $\pm 4.7$ dB             |
| Radiated emission (18 GHz – 40 GHz)        | $\pm 5.8$ dB             |
| Radio Frequency                            | $\pm 1.4 \times 10^{-8}$ |
| RF power, conducted                        | $\pm 0.8$ dB             |
| Temperature                                | $\pm 0.6$ °C             |
| Humidity                                   | $\pm 1.2$ %              |
| Voltage (DC)                               | $\pm 0.4$ %              |
| Voltage (AC, <10kHz)                       | $\pm 0.2$ %              |

| Judge | Measured value and standard limit value   |   |
|-------|---|---|
| PASS  | <p><b>Case1</b></p>  | Even if it takes uncertainty into consideration, a standard limit value is fulfilled.   |
|       | <p><b>Case2</b></p>  | Although measured value is in a standard limit value, a limit value won't be fulfilled if uncertainty is taken into consideration.  |
| FAIL  | <p><b>Case3</b></p>  | Although measured value exceeds a standard limit value, a limit value will be fulfilled if uncertainty is taken into consideration. |
|       | <p><b>Case4</b></p>  | Even if it takes uncertainty into consideration, a standard limit value isn't fulfilled.  |

## 6 Laboratory Information

Testing was performed and the report was issued at:

### **TÜV SÜD Japan Ltd. Yonezawa Testing Center**

Address: 5-4149-7 Hachimanpara, Yonezawa-shi, Yamagata, 992-1128 Japan

Phone: +81-238-28-2881

Fax: +81-238-28-2888

### **Accreditation and Registration**

A2LA

Certificate #3686.03

VLAC

Accreditation No.: VLAC-013

BSMI

Laboratory Code: SL2-IN-E-6018, SL2-A1-E-6018

Innovation, Science and Economic Development Canada

ISED#: 4224A

VCCI Council

| Registration number | Expiration date |
|---------------------|-----------------|
| A-0166              | 03-July-2021    |
