

TEST Report

| Applicant: | Zhongshan Xuanping Intelligent Technology Co., Ltd |
|--|--|
| Address of Applicant: | No. 01, 5th Floor, Building 5, No.1 Henglong Road, Tongyi Industrial Park, Guzhen Town, Zhongshan City |
| Manufacturer : | Zhongshan Xuanping Intelligent Technology Co., Ltd |
| Address of Manufacturer : Equipment Under Test (El | No. 01, 5th Floor, Building 5, No.1 Henglong Road, Tongyi Industrial Park, Guzhen Town, Zhongshan City JT) |
| Product Name: | 3d hologram fan |
| Model No.: | F65 |
| Series model: | Z1, Z2, Z3, Z4, Z5, Z200, Z300, Q14, Q42, Q45, Q50, Q60, Q65, Q80, Q115, F65, F1, F100, A30 |
| Trade Mark: | N/A |
| FCC ID: | 2BNPM-F65 |
| Applicable standards: Date of sample receipt: | FCC CFR Title 47 Part 15 Subpart C Section 15.247 Dec. 23, 2024 |
| Date of Test: | Dec. 23, 2024 ~ Jan. 15, 2024 |
| Date of report issued: | Jan. 15, 2024 |
| Test Result : | PASS * |

* In the configuration tested, the EUT complied with the standards specified above.

3. Test Summary

| Test Item | Section in CFR 47 | Result | |
|----------------------------------|-------------------|--------|--|
| Antenna requirement | 15.203/15.247 (c) | Pass | |
| AC Power Line Conducted Emission | 15.207 | Pass | |
| Conducted Output Power | 15.247 (b)(3) | Pass | |
| Channel Bandwidth | 15.247 (a)(2) | Pass | |
| Power Spectral Density | 15.247 (e) | Pass | |
| Band Edge | 15.247(d) | Pass | |
| Spurious Emission | 15.205/15.209 | Pass | |

Remarks:

- 1. Pass: The EUT complies with the essential requirements in the standard.
- 2. Test according to ANSI C63.10:2013

Measurement Uncertainty

| Test Item | Frequency Range | Measurement Uncertainty | Notes |
|-------------------------------|--------------------------------------|-----------------------------------|-------|
| Radiated Emission | 30~1000MHz | 4.37 dB | (1) |
| Radiated Emission | 1~18GHz | 5.40 dB | (1) |
| Radiated Emission | 18-40GHz | 5.45 dB | (1) |
| Conducted Disturbance | 0.15~30MHz | 2.68 dB | (1) |
| Note (1): The measurement unc | ertainty is for coverage factor of k | =2 and a level of confidence of § | 95%. |

4. General Information

4.1. General Description of EUT

| Product Name: | 3d hologram fan |
|----------------------|---|
| Model No.: | F65 |
| Series model: | Z1, Z2, Z3, Z4, Z5, Z200, Z300, Q14, Q42, Q45, Q50, Q60, Q65, Q80, Q115, F65, F1, F100, A30 |
| Test sample(s) ID: | HTT2024121266-1(Engineer sample) HTT2024121266-2(Normal sample) |
| Operation frequency | 2402~2480 MHz |
| Number of Channels | 40 |
| Modulation Type | GFSK |
| Channel separation | 2MHz |
| Antenna Type: | PCB Antenna |
| Antenna Gain: | -0.58dBi |
| Power Supply: | DC 24V |
| Adapter Information: | MODEL NO.: JC2404 Input: AC100-240V, 50/60Hz, 1.5A Output: DC 24V, 4A |

| Channel | Frequency(MHz) | Channel | Frequency(MHz) |

| 14 | 2430 | 34 | 2470 |
| 15 | 2432 | 35 | 2472 |
| 16 | 2434 | 36 | 2474 |
| 17 | 2436 | 37 | 2476 |
| 18 | 2438 | 38 | 2478 |
| 19 | 2440 | 39 | 2480 |

Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Channel | Frequency |
|---------------------|-----------|
| The lowest channel | 2402MHz |
| The middle channel | 2440MHz |
| The Highest channel | 2480MHz |

4.2. Test mode

Transmitting mode Keep the EUT in continuously transmitting mode.

Remark: During the test, the test voltage was tuned from 85% to 115% of the nominal rated supply voltage, and found that the worst case was under the nominal rated supply condition. So the report just shows that condition's data.

4.3. Description of Support Units

None.

4.4. Deviation from Standards

None.

4.5. Abnormalities from Standard Conditions

None.

4.6. Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

FCC-Registration No.: 779513 Designation Number: CN1319

Shenzhen HTT Technology Co.,Ltd. has been accredited on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements.

A2LA-Lab Cert. No.: 6435.01

Shenzhen HTT Technology Co.,Ltd. has been listed by American Association for Laboratory Accreditation to perform electromagnetic emission measurement.

The 3m-Semi anechoic test site fulfils CISPR 16-1-4 according to ANSI C63.10 and CISPR 16-1-4:2010.

4.7. Test Location

All tests were performed at:

Shenzhen HTT Technology Co.,Ltd.

1F, Building B, Huafeng International Robotics Industrial Park, Hangcheng Road, Nanchang Community, Xixiang Street, Bao'an District, Shenzhen, Guangdong, China Tel: 0755-23595200

Fax: 0755-23595201

4.8. Additional Instructions

| Test Software | Special AT test command provided by manufacturer to Keep the EUT in continuously transmitting mode and hopping mode |

 Shenzhen HTT Technology Co.,Ltd.
 Tel: 0755-23595200 Fax: 0755-23595201

 1F, Building B, Huafeng International Robotics Industrial Park, Hangcheng Road,Nanchang Community, Xixiang Street, Bao'an District, Shenzhen, Guangdong, China

Test Requirement: FCC Part15 C Section 15.209 and 15.205 Test Method: ANSI C63.10:2013 All of the restrict bands were tested, only the worst band's (2310MHz to Test Frequency Range: 2500MHz) data was showed. Measurement Distance: 3m Test site: Receiver setup: Detector RBW VBW Value Frequency 3MHz Peak Peak 1MHz Above 1GHz RMS 1MHz 3MHz Average Limit: Limit (dBuV/m @3m) Value Frequency 54.00 Average Above 1GHz 74.00 Peak Test setup: < 3m > Test Antenna+ < 1m ... 4m > FUT. Tum Table+ -150cm SI Preamplifier Receiver. Test Procedure: 1. The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation. 2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower 3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. 4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading. 5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. 6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasipeak or average method as specified and then reported in a data sheet. 7. The radiation measurements are performed in X, Y, Z axis positioning. And found the X axis positioning which it is worse case, only the test worst case mode is recorded in the report. Test Instruments: Refer to section 6.0 for details Test mode: Refer to section 5.2 for details Test results: Pass Test environment: Temp.: 25 °C Humid.: 52% Press.: 1012mbar

| Test results: | Pass | | | | | | | |

Measurement data:

Remarks:

- 1. Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis which it is worse case.
- 2. Radiated emission test from 9 KHz to 10th harmonic of fundamental was verified, and no emission found except system noise floor in 9 KHz to 30MHz and not recorded in this report.
- 3. Based on all tested data, the EUT complied with the FCC Part 15.207 standard limit for a wireless device, and with the worst case as BLE 1M 2402MHz as below:

Remark:

(1) Data of measurement within this frequency range shown "--- " in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.

(2) When the test results of Peak Detected below the limits of Average Detected, the Average Detected is not need completed.

6.7. Antenna Requirement

Standard Applicable

For intentional device, according to FCC 47 CFR Section 15.203:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited

FCC CFR Title 47 Part 15 Subpart C Section 15.247(c) (1) (I):

(i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi.

Antenna Connected Construction

The maximum gain of antenna was -0.58 dBi.

Remark: The antenna gain is provided by the customer, if the data provided by the customer is not accurate, Shenzhen HTT Technology Co., Ltd. does not assume any responsibility.
