

Models: OTE140L/OTE140R

Models: OTE140L(left earbud)/OTE140R(right earbud) are a in-the-ear style headset (left and right earbud) utilizing Bluetooth technology in the 2.4 GHz band for a short range (up to 10 meters) RF link. Both left and right side earbud contains microphone and a receiver, and is intended for hands free communications with mobile telephones containing Bluetooth compatibility or any other device that has a Bluetooth Audio Gateway.

The circuit schematics and components of Left earbud (OTE140L) and Right earbud (OTE140R) are the same. So is the antenna, output power and software. The PCB layout of Right earbud and Left earbud are mirrored, but there are small variations in layout due to non-symmetries of certain component footprints (e.g. IC's).

Sincerely

A handwritten signature in black ink, appearing to read "Bill Lin".
