Regarding: NFC functions remove but PCB layout not change for FCC ID: SEJ-ZCONNECT

To Whom It May Concern,

We, Zonar Systems Inc, declare on our role responsibility for the product of model ZONARCONNECT.

The differences between model 20081 and model ZONARCONNECT are as below:
Model 20081 has NFC while model ZONARCONNECT has removed NFC.

According to KDB 484596 D01, "different devices may reference or reuse EMC and radio parameter test data from the application records of a similar device, for test reduction purposes."

In this case, only the NFC function has been removed for business purposes from the original EUT (Original FCC: SEJ-CONNECT), while the PCB layout and all other functions are unchanged.

Therefore, the current EUT (New FCC: SEJ-ZCONNECT) was assessed and the data can be reused. Please reference KDB484596 D01 for more information.

Except listings above, all others are the same as previous version.
All data will be reused except for data on NFC and SAR.

For more details, please refer to the Reference section and the Spot check sections in the Reuse Data Test Report.

Sincerely,

A handwritten signature in black ink, appearing to read "David Pascoe", written over a large, stylized circular flourish.
