April 7, 2003

RE: Tadiran Telematics Ltd.

FCC ID: NTAMMR2

I have a few comments on the above referenced Application.

- 1) The block diagram and block diagram within the test report state that the receiver is programmable from 904-925 MHz. The 731 form states 905-924 MHz. Please explain.
- 2) Information given in the operational description, etc. shows the device contains a case. The device is not considered a final device without the case. Additionally, the labeling must be placed on the outside of the case, not on the board. Please provide corrected labeling showing the labels on the outside of the case.
- 3) Please provide sufficient external photographs to show various aspects of the device (i.e. top, bottom, connectors, buttons, etc.)
- 4) FYI. Based on your response, this device is considered a composite device and will receive 2 grants of authorization. One as a scanning receiver and a second as a PC Peripheral.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
