

Date: January 24, 2022

FCC ID: 2AAAS-CM09

IC: 10941A-CM09

To Whom It May Concern:

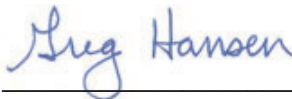

We, Vivint. Inc., declare as below:

The product identification label listing the manufacturer, model number, serial number, input rating, country of origin, and the IC and FCC Identifiers is permanently affixed to the rear surface of the doorbell camera. The identification label is readily visible to the end user when the product is removed from the packaging. After installation, the identification label is readily visible when the doorbell camera is removed from the mounting plate. The IC and FCC Identifiers and regulatory warning statements are also contained in the User Guide/Instructions.

The mounting plate must be attached to the back side of the doorbell camera to provide attachment of the doorbell to the structure. The mounting plate also protects the doorbell from environmental damage.

Vivint has attached the identification label to the rear surface of the doorbell camera, as the doorbell camera is the device that is FCC certified and not the mounting plate. FCC Part 2.925 (d) (2) states, "It is preferable that it (label) be visible at all times during normal installation or use, but this is not a prerequisite for grant of equipment authorization."

Sincerely,
