

FCC ID: DF6WL306

This submission is for a regular WLAN Access point used with a set of antennas with different cable length.

The radio output power can be set via software. This function is not accessible for the user it will be set by the manufacturer.

Which antenna combinations and power settings are possible to comply with the FCC requirements are listed in the document “certificate”.

The testing was done using the worst-case conditions of the antenna/power setting combination. More detailed information see in the document “certificate”.
