FCC ID Z5ISL1 Limited Modular Approval Host Enforcement Method

KCF Technologies is requesting a limited modular approval for the aforementioned device. The module has been tested in the Host below, SD-BASE-4, and must be installed in this host for the testing to be valid. To enforce this, the Host is completely assembled at KCF Production facilities and is not user-configurable. The aluminum EMI shield, shown open in the photo below, is riveted shut after inner unit assembly. After this step, the outer enclosure is assembled with security torx screws and threadlocker. The device is marked not user serviceable, and only KCF Technologies personnel have knowledge, training, and access (restricted via certificate security) to log into the Host directly and make any changes to operating parameters of the Host.
