**In re: BLUEBIRD INC.
FCC Application for FCC ID : SS4MT280**

Cover letter

Gentlemen:

I.

The product is Mobile Payment Terminal whose RF functions are GSM, WLAN, BT and NFC.

The GSM module is already authorized under FCC ID: QIPBGS2.

The module is electrically identical to the one originally approved. There are no hardware changes and RF power changes though the Host device uses the different antennas from that of the modules. So we substituted parts of the module Characteristics related to the conducted measurements in the approved test report. We re-used the module RF report for the conducted measurement characteristics.

II.

The transmitters (GSM, WLAN and BT) do not operate simultaneously.

If the WLAN is on, the other transmitters like BT and GSM Transmitter are off automatically. Also the other transmitters are the same.

III.

The Product does not support Voice call mode for GSM. It only supports data mode.

Sincerely,

**Jaeho Lee / Research Engineer
BLUEBIRD INC.**
