

## Description Of Differences

Symbol Technologies is inserting the Sierra Wireless Inc. FCC Part 22 approved CDPD radio module (FCC ID:N7NOEM2) into the Symbol PDT7500 hand held computer terminal. The new product will be known as the PDT7533 Dragon WAN terminal with CDPD radio. The Novatel module is the SB300. Symbol is applying for a new FCC ID Number H9PPDT7533.

The CDPD module itself is being used with no changes at all from the Sierra Wireless Inc. approved unit. The only difference is the cable from module to the antenna and the antenna itself. The antenna is a unity gain antenna that is described in more detail in the antenna exhibit.
