

# **TEST REPORT**

Applicant Name: Max Sales Group

Address: 15240 NELSON AVENUE CITY OF INDUSTRY, Los Angeles

California United States 90040

Report Number: SZ3220614-26226E-RF

FCC ID: 2AUIF-VT-07863-2

Test Standard (s)

FCC PART 15.249

**Sample Description** 

Product Type: DRONE S106-Remote Control

Model No.: VT-07863
Trade Name: BESMERY
Date Received: 2022-06-14

Date of Test: 2022-06-23 to 2022-07-06

Report Date: 2022-07-08

Test Result: Pass\*

**Prepared and Checked By:** 

**Approved By:**

## **GENERAL INFORMATION**

## **Product Description for Equipment under Test (EUT)**

| Product                            | DRONE S106-Remote Control                         |
|------------------------------------|---|
| Tested Model                       | VT-07863  |
| Trademark                          | BESMERY   |
| Frequency Range                    | 2449-2480MHz                                      |
| Maximum E-Field<br>Strength (Peak) | 90.90dBuV/m@3m                                    |
| Modulation Technique               | GFSK  |
| Antenna Specification              | 0dBi (It is provided by the applicant)            |
| Voltage Range                      | DC 4.5V from battery                              |
| Sample serial number               | SZ3220614-26226E-RF-S1(Assigned by ATC, Shenzhen) |
| Sample/EUT Status                  | Good condition                                    |

Report No.: SZ3220614-26226E-RF

## **Objective**

This type approval report is in accordance with Part 2-Subpart J, and Part 15-Subparts A and C of the Federal Communication Commissions rules.

The tests were performed in order to determine compliance with FCC Part 15, Subpart C, and section 15.203, 15.205, 15.209 and 15.249 rules.

## **Test Methodology**

All measurements contained in this report were conducted with ANSI C63.10-2013, American National Standard of Procedures for Compliant Testing of Unlicensed Wireless Devices.

All emissions measurement was performed at Shenzhen Accurate Technology Co., Ltd. The radiated testing was performed at an antenna-to-EUT distance of 3 meters.

## **Measurement Uncertainty**

| Parameter  |                 | Uncertainty |  |  |
|------------|-----------------|-------------|--|--|
|            | 30MHz - 1GHz    | 4.28dB      |  |  |
| Emissions, | 1GHz - 18GHz    | 4.98dB      |  |  |
| Radiated   | 18GHz - 26.5GHz | 5.06dB      |  |  |
|            | 26.5GHz - 40GHz | 4.72dB      |  |  |
| Tempo      | erature         | 1°C         |  |  |
| Humidity   |                 | 6%          |  |  |
| Supply     | voltages        | 0.4%        |  |  |

Report No.: SZ3220614-26226E-RF

Note: The extended uncertainty given in this report is obtained by combining the standard uncertainty times the coverage factor K with the 95% confidence interval. Otherwise required by the applicant or Product Regulations, Decision Rule in this report did not consider the uncertainty.

## **Test Facility**

The test site used by Shenzhen Accurate Technology Co., Ltd. to collect test data is located on the 1/F., Building A, Changyuan New Material Port, Science & Industry Park, Nanshan District, Shenzhen, Guangdong, P.R. China.

The test site has been approved by the FCC under the KDB 974614 D01 and is listed in the FCC Public Access Link (PAL) database, FCC Registration No.: 708358, the FCC Designation No.: CN1189.

Accredited by American Association for Laboratory Accreditation (A2LA). The Certificate Number is 4297.01

The lab has been recognized by Innovation, Science and Economic Development Canada to test to Canadian radio equipment requirements, the CAB identifier: CN0016. The Registration Number is 5077A.

## **SYSTEM TEST CONFIGURATION**

#### **Justification**

The system was configured for testing by manufacturer.

Frequency list:

| Channel | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) |
|---------|--------------------|---------|--------------------|---------|--------------------|
| 1       | 2449               | 12      | 2461               | 23      | 2472               |
| 2       | 2450               | 13      | 2462               | 24      | 2473               |
| 3       | 2451               | 14      | 2463               | 25      | 2474               |
| 4       | 2452               | 15      | 2464               | 26      | 2475               |
| 5       | 2453               | 16      | 2465               | 27      | 2476               |

| 10      | 2459               | 21      | 2470               | /       | /                  |
| 11      | 2460               | 22      | 2471               | /       | /                  |

Report No.: SZ3220614-26226E-RF

Channel 1, Channel 15 and Channel 31 were selected for testing.

#### **EUT Exercise Software**

No software, test in manual button set frequency which switch channel by button and power level is default\*.

## **Equipment Modifications**

No modifications were made to the unit tested.

## **Support Equipment List and Details**

Report No.: SZ3220614-26226E-RF

<sup>\*</sup> Statement of Traceability: Shenzhen Accurate Technology Co., Ltd. Attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

## FCC §1.1307 (b) & §2.1093 – RF EXPOSURE

## **Applicable Standard**

According to FCC §2.1093 and §1.1307(b), systems operating under the provisions of this section shall be operated in a manner that ensure that the public is not exposed to radio frequency energy level in excess of the Commission's guideline.

Report No.: SZ3220614-26226E-RF

According to KDB 447498 D04 Interim General RF Exposure Guidance v01, clause 2.1.2 – 1-mW test Exemption:

Per § 1.1307(b)(3)(i)(A), a single RF source is exempt RF device (from the requirement to show data demonstrating compliance to RF exposure limits, as previously mentioned) if the available maximum time-averaged power is no more than 1 mW, regardless of separation distance. This exemption applies to all operating configurations and exposure conditions, for the frequency range 100 kHz to 100 GHz, regardless of fixed, mobile, or portable device exposure conditions. This is a standalone exemption, and it cannot be applied in conjunction with any other test exemption.

#### **Test Result:**

For worst case:

| Mode     | Frequency | Maximum<br>Tune-up<br>Conducted<br>Power |      | Ant.<br>Gain | EIRP  |      | 1-mW test<br>Exemption |
|----------|-----------|--|------|--------------|-------|------|------------------------|
|          | (MHz)     | (dBm)                                    | (mW) | (dBi)        | (dBm) | (mW) |                        |
| 2.4G SRD | 2449-2480 | -4.0                                     | 0.4  | 0            | -4.0  | 0.4  | Yes                    |

Note: The tune-up power was declared by the applicant.

Result: Compliant.

# FCC§15.203 – ANTENNA REQUIREMENT

## **Applicable Standard**

According to FCC § 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

Report No.: SZ3220614-26226E-RF

#### **Antenna Connector Construction**

The EUT has one internal antenna which was permanently attached and the antenna gain is 0dBi, fulfill the requirement of this section. Please refer to the EUT photos.

Result: Compliant.

## FCC§15.205, §15.209 & §15.249(d) – RADIATED EMISSIONS

## **Applicable Standard**

As per FCC§15.249 (a), except as provided in paragraph (b) of this section, the field strength of emissions from intentional radiators operated within these frequency bands shall comply with the following:

| Fundamental Field strength of fundamental (millivolts/meter) |     | Field strength of harmonics (microvolts/meter) |
|--|-----|--|
| 902–928 MHz  | 50  | 500  |
| 2400–2483.5 MHz  | 50  | 500  |
| 5725–5875 MHz  | 50  | 500  |
| 24.0–24.25 GHz   | 250 | 2500   |

Report No.: SZ3220614-26226E-RF

As per FCC§15.249 ©, Field strength limits are specified at a distance of 3 meters. As per FCC§15.249 (d), Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in §15.209, whichever is the lesser attenuation.

## **Test Equipment Setup**

The spectrum analyzer or receiver is set as:

Below 1000MHz:

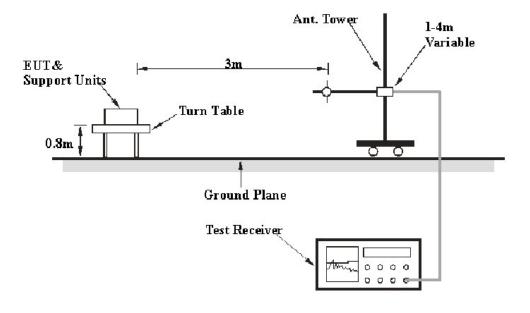

$$RBW = 100 \text{ kHz} / VBW = 300 \text{ kHz} / Sweep = Auto$$

Above 1000MHz:

If the maximized peak measured value complies with the limit, then it is unnecessary to perform QP/Average measurement.

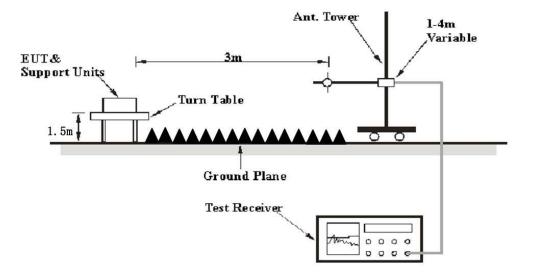

## **EUT Setup**

#### **Below 1GHz:**

Report No.: SZ3220614-26226E-RF

#### **Above 1GHz:**

The radiated emission and out of band emission tests were performed in the 3meters chamber test site, using the setup accordance with the ANSI C63.10-2013. The specification used was the FCC 15.209/15.205 and FCC 15.249 limits.

#### **Test Procedure**

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

Report No.: SZ3220614-26226E-RF

The EUT is set 3 meter away from the testing antenna, which is varied from 1-4 meter, and the EUT is placed on a turntable, which is 0.8 meter above ground plane for below 1GHz or 1.5 meter for above 1GHz, the table shall be rotated for 360 degrees to find out the highest emission. The receiving antenna should be changed the polarization both of horizontal and vertical.

#### **Corrected Amplitude & Margin Calculation**

The Factor is calculated by adding the Antenna Factor and Cable Loss, and subtracting the Amplifier Gain. The basic equation is as follows:

Factor = Antenna Factor + Cable Loss – Amplifier Gain

The "Over Limit/Margin" column of the following data tables indicates the degree of compliance with the applicable limit. For example, an Over Limit/margin of -7dB means the emission is 7dB below the limit. The equation for calculation is as follows:

Over Limit/Margin = Level / Corrected Amplitude – Limit Level / Corrected Amplitude = Read Level + Factor

#### **Test Results Summary**

According to the EUT complied with the FCC Part 15.205, 15.209 & §15.249

#### **Test Data**

#### **Environmental Conditions**

| Temperature:       | 27°C     |
|--------------------|----------|
| Relative Humidity: | 60%      |
| ATM Pressure:      | 108.0kPa |

The testing was performed by Level Li on 2022-07-06.

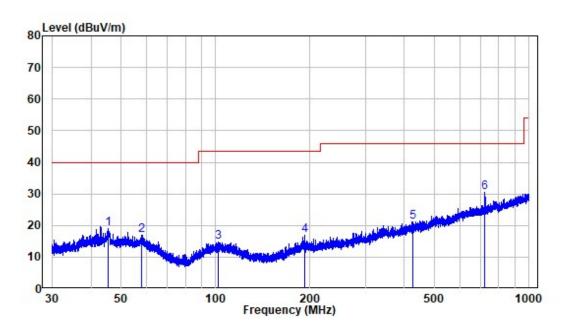

Test Mode: Transmitting (Pre-scan in the X, Y and Z axes of orientation, the worst case X-axis of orientation was recorded)

Report No.: SZ3220614-26226E-RF

#### Note:

 $Factor = Antenna \ factor \ (RX) + Cable \ Loss - Amplifier \ Factor$ 

Absolute Level (Corrected Amplitude) = Factor + Reading

Margin = Absolute Level (Corrected Amplitude) – Limit

The other spurious emission which is in the noise floor level was not recorded.

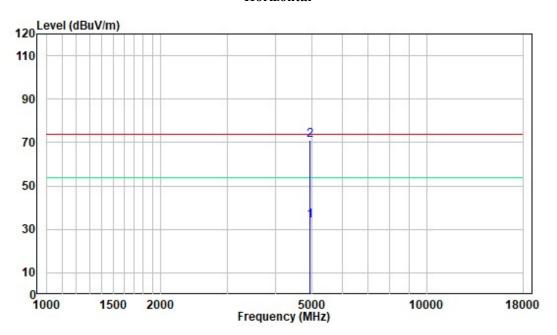

For above 1GHz, the test result of peak was 20dB below to the limit of peak, which can be compliant to the average limit, so just peak value was recorded.

## FCC§15.215(c) - 20dB EMISSION BANDWIDTH

## **Applicable Standard**

Intentional radiators operating under the alternative provisions to the general emission limits, as contained in § 15.217 through 15.257 and in Subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated.

Report No.: SZ3220614-26226E-RF

#### **Test Procedure**

- 1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
- 2. Position the EUT without connection to measurement instrument. Turn on the EUT and connect it to measurement instrument. Then set it to any one convenient frequency within its operating range. Set a reference level on the measuring instrument equal to the highest peak value.
- 3. Measure the frequency difference of two frequencies that indicated 20dBbandwidth.
- 4. Repeat above procedures until all frequencies measured were complete.
