

Declaration on model difference

We hereby confirm that these models are identical and all models have the same RF module and antenna, schematics. Only the model, PCB layout and appearance are different. All models were tested.

The SP-0222 has a volume button but no light board, and the SP-0233 has a light board but no volume button. The two models have the same wireless chip, with minor differences in other components.

SP-0233 added two 47K resistors, an 8050 triode and a 2301 MOS tube. Because 0233 is with a light, these materials are to control the light.
