AC of st not contain ferrites, unless length of these lines shall be eters to insure that there is not y accessories, peripherals, or	stand-alone configuration, i.e., the module must not be intended to demonstrate that the module is capable of ardless of the device into which it is eventually installed. It is powered, it must comply with the AC line conducted or DC power lines and data input/output lines connected to they will be marketed with the module (see Section length typical of actual use or, if that length is unknown, at o coupling between the case of the module and supporting support equipment connected to the module during testing ble (see Section 15.31(i)). 15.212(a)(1)(v)	🛚 - YES	- NO(*)
Details: - The	module was tested in OEM	host PC and is limited to installation in the host described	in this filing.	

	Modular Approval Requirement	Requirement Met	
6.	The modular transmitter must be labeled with its own FCC ID number, or use an electron display (see KDB Publication 784748). If using a permanently affixed label with its own FCC ID number, if the FCC ID is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains Transmitter Module FCC ID: XYZMODEL1" or "Contains FCC ID: XYZMODEL1." Any similar wording that expresses the same meaning may be used. The Grantee may either provide such a label, an example of which must be included in the application for equipment authorization, or, must provide adequate instructions along with the module which explain this requirement. In the latter case, a copy of these instructions must be included in the application for equipment authorization. If the modular transmitter uses an electronic display of the FCC identification number, the information	⊠ - YES	□ - NO(*)
	must be readily accessible and visible on the modular transmitter or on the device in which it is installed. If the module is installed inside another device, then the outside of the device into which the module is installed must display a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains FCC certified transmitter module(s)." Any similar wording that expresses the same meaning may be used. The user manual must include instructions on how to access the electronic display. A copy of these instructions must be included in the application for equipment authorization. 15.212(a)(1)(vi)		
	Details: – There is a label on the module as shown in the labeling exhibit filed with this application. It instructions are shown in the installation manual .filed with this application.	Host specific l	abeling
7.	The modular transmitter must comply with all specific rule or operating requirements applicable to the transmitter, including all the conditions provided in the integration instructions by the grantee. A copy of these instructions must be included in the application for equipment authorization. For example, there are very strict operational and timing requirements that must be met before a transmitter is authorized for operation under Section 15.231. For instance, data transmission is prohibited, except for operation under Section 15.231(e), in which case there are separate field strength level and timing requirements. Compliance with these requirements must be assured. 15.212(a)(1)(vii)	⊠ - YES	□ - NO(*)
	Details: - The module complies with FCC Part 15C requirements. Instructions to the OEM installer of installation manual filed with this application.	are provided i	n the
8.	The modular transmitter must comply with any applicable RF exposure requirements. For example, FCC Rules in Sections 2.1091, 2.1093 and specific Sections of Part 15, including 15.319(i), 15.407(f), 15.253(f) and 15.255(g), require that Unlicensed PCS, UNII and millimeter wave devices perform routine environmental evaluation for RF Exposure to demonstrate compliance. In addition, spread spectrum transmitters operating under Section 15.247 are required to address RF Exposure compliance in accordance with Section 15.247(b)(4). Modular transmitters approved under other Sections of Part 15, when necessary, may also need to address certain RF Exposure concerns, typically by providing specific installation and operating instructions for users, installers and other interested parties to ensure compliance. 15.212(a)(1)(viii)	⊠ - YES	□ - NO(*)
	Details: - The module meets mobile/portable conditions levels as shown in the RF exposure test reportable application.	rt filed with th	is

Limited Module Description – When Applicable

* If a module does NOT meet one or more of the above 8 requirements, the applicant may request Limited Modular Approval (LMA). This Limited Modular Approval (LMA) is applied with the understanding that the applicant will demonstrate and will retain control over the final installation of the device, such that compliance of the end product is always assured. The operating condition(s) for the LMA; the module is only approved for use when installed in devices produced by grantee. A description regarding how control of the end product, into which the module will be installed, will be maintained by the applicant/manufacturer, such that full compliance of the end product is always ensured should be provided here.

Details: The module was tested in the OEM host PC and is limited to installation in the PC described in this application.

Software Considerations – KDB 594280 / KDB 442812 (One of the following 2 items must be applied)				
Requirement	Requirement Met			
 For non-Software Defined Radio transmitter modules where software is used to ensure compliance of the device, technical description must be provided about how such control is implemented to ensure prevention of third-party modification; see KDB Publication 594280. 	⊠ - Provided in Separate Cover Letter □ - N/A			
Details: The firmware of the device cannot be modified or adjusted by the end user as described in a separate cover letter filed with this application.				
 For <u>Software Defined Radio (SDR)</u> devices, transmitter module applications must provide a software security description; see KDB Publication 442812. 	☐ - Provided in Separate Cover Letter ☐ - N/A			
Details: <example -n="" a=""></example>				

Split Modular Requirements					
Requirement	Provided in Manual				
 For split modular transmitters, specific descriptions for secure communications between front-end and control sections, including authentication and restrictions on third-party modifications; also, instructions to third-party integrators on how control is maintained. 	☐ - Provided in Separate Cover Letter	⊠ - N/A			
Details: <example -="" a="" n=""></example>
