

RE: Ainstein AI, Inc.

FCC ID: 2ATMB-WAYVAIR2020

ATCB025740

After a review of the submitted information, I have a few comments regarding the above referenced Application. Depending on your responses, please note that there may be additional questions.

The Block Diagram shows an optional Zigbee tx not addressed elsewhere in the application – please provide information regarding this device. I note that the embedded Ai-Thinker module being employed is only authorized for 802.11 operation, not Zigbee. How will the Zigbee option be implemented? Please clarify.

Zigbee will not be included in this application and disabled in firmware and locked out from the user.

Please clarify if both versions of the EUT (RS-485 and USB) are shown in the External and Internal Photos, specifying which photos go with each version. If the Photos only show one version, please revise to also include (clearly marked) photos of the second version as well. **The photos include the USB version only. Please note that this application covers only the USB version. The RS-485 version will be added later as a C1PC. The report should not mention RS-485. Apologies for previous confusion.**
