Room 106, Building 1, Yibaolai Industrial Park, Qiaotou Community, Fuhai Street, Bao'an District, Shenzhen, China

## FCC PART 15 SUBPART C TEST REPORT

**FCC PART 15.247** 

Compiled by File administrators Kevin Liu

(position+printed name+signature) .:

Supervised by

( position+printed name+signature) .: Project Engineer Kevin Liu

Approved by

( position+printed name+signature) .: RF Manager Eric Wang

Date of issue ...... Apr. 26, 2022

Testing Laboratory Name..... Shenzhen CTA Testing Technology Co., Ltd.

Fuhai Street, Bao' an District, Shenzhen, China

Applicant's name...... Shenzhen Tongzhou Yidao Technology CO., LTD

Bantian, Longgang District, Shenzhen City

Test specification....:

Standard..... FCC Part 15.247

TRF Originator...... Shenzhen CTA Testing Technology Co., Ltd.

## Shenzhen CTA Testing Technology Co., Ltd. All rights reserved.

This publication may be reproduced in whole or in part for non-commercial purposes as long as the Shenzhen CTA Testing Technology Co., Ltd. is acknowledged as copyright owner and source of the material. Test item description ...... dash camera

Trade Mark ...... FITCAMX

Manufacturer ...... Shenzhen Tongzhou Yidao Technology CO., LTD

Model/Type reference ...... DC400

Listed Models .....: N/A

Modulation Type...... CCK/DSSS/ OFDM

Operation Frequency..... From 2412 - 2462MHz

Rating ...... DC 12.0V From external circuit

Result ..... PASS

CTATE

#### TEST STANDARDS 1

The tests were performed according to following standards:

FCC Rules Part 15.247: Frequency Hopping, Direct Spread Spectrum and Hybrid Systems that are in operation within the bands of 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz. ANSI C63.10-2013: American National Standard for Testing Unlicensed Wireless Devices KDB558074 D01 v05r02: Guidance for Compliance Measurements on Digital Transmission Systems (DTS) ,Frequency Hopping Spread Spectrum System(HFSS), and Hybrid System Devices Operating Under J.247 §15.247 of The FCC rules.

Report No.: CTA22041400501 Page 5 of 37

#### SUMMARY 2

### 2.1 General Remarks

| 2.1 General Remarks            |   |               |
|--------------------------------|---|---------------|
| Date of receipt of test sample |   | Apr. 08, 2022 |
| Testing commenced on           |   | Apr. 08, 2022 |
| Testing concluded on           | : | Apr. 26, 2022 |

# 2.2 Product Description

| Product Name:         | dash camera   |
|-----------------------|---|
| Model/Type reference: | DC400   |
| Power supply:         | DC 12.0V From external circuit  |
| testing sample ID:    | CTA220414005-1# (Engineer sample),<br>CTA220414005-2# (Normal sample) |
| Hardware version:     | V1.0  |
| Software version:     | V1.0  |
| WIFI:                 |   |
| Supported type:       | 802.11b/802.11g/802.11n(H20)  |
| Modulation:           | 802.11b: DSSS<br>802.11g/802.11n(H20): OFDM                           |
| Operation frequency:  | 802.11b/802.11g/802.11n(H20): 2412MHz~2462MHz                         |
| Channel number:       | 802.11b/802.11g/802.11n(H20): 11                                      |
| Channel separation:   | 5MHz  |
| Antenna type:         | Internal antenna  |
| Antenna gain:         | 1.75dBi   |

# 2.3 Equipment Under Test

### Power supply system utilised

| 2.3 Equipment Under   | Test     |   |                         |          |             |

| Power supply voltage  | :        | 0 | 230V / 50 Hz            | 0        | 120V / 60Hz |
|                       |          | 0 | 5 V DC                  | 0        | 24 V DC     |
|                       |          | • | Other (specified in bla | nk below |             |

DC 12.0V From external circuit

# Short description of the Equipment under Test (EUT)

This is Dash camera.

For more details, refer to the user's manual of the EUT.

# 2.5 EUT operation mode

The application provider specific test software(AT command) to control sample in continuous TX and RX (Duty Cycle >98%) for testing meet KDB558074 test requirement.

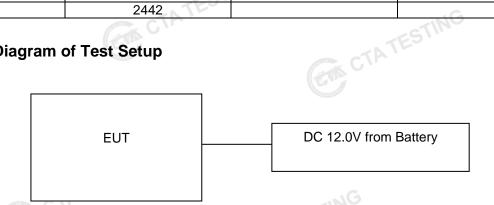

IEEE 802.11b/g/n: Thirteen channels are provided to the EUT.

| Channel | Frequency(MHz) | Channel | Frequency(MHz) |
|---------|----------------|---------|----------------|
| 1       | 2412           | 8       | 2447           |

# 2.6 Block Diagram of Test Setup

# Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for filing to comply with Section 15.247 of the FCC Part 15, Subpart C Rules.

#### 2.8 **Modifications**

No modifications were implemented to meet testing criteria. CTA TESTING

Page 7 of 37 Report No.: CTA22041400501

#### 3 TEST ENVIRONMENT

# 3.1 Address of the test laboratory

Shenzhen CTA Testing Technology Co., Ltd.

Room 106, Building 1, Yibaolai Industrial Park, Qiaotou Community, Fuhai Street, Bao' an District, Shenzhen, China

#### 3.2 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

FCC-Registration No.: 517856 Designation Number: CN1318

Shenzhen CTA Testing Technology Co., Ltd. has been listed on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements.

A2LA-Lab Cert. No.: 6534.01

Shenzhen CTA Testing Technology Co., Ltd. has been listed by American Association for Laboratory Accreditation to perform electromagnetic emission measurement.

The 3m-Semi anechoic test site fulfils CISPR 16-1-4 according to ANSI C63.10 and CISPR 16-1-4:2010.

#### 3.3 **Environmental conditions**

During the measurement the environmental conditions were within the listed ranges:

Radiated Emission:

| Temperature:          | 25 ° C       |
|-----------------------|--------------|
| Colle                 | J 12         |
| Humidity:             | 45 %         |
|                       |              |
| Atmospheric pressure: | 950-1050mbar |

Conducted testina:

| Temperature:          | 25 ° C       |
|-----------------------|--------------|
|                       |              |
| Humidity:             | 44 %         |
| 7ES 1"                |              |

|     | FCC Part 15.247(b)              | Maximum Peak Conducted Output Power | PASS |
|     | FCC Part 15.247(e)              | Power Spectral Density              | PASS |
|     | FCC Part 15.109/ 15.205/ 15.209 | Radiated Emissions                  | PASS |
| CIL | FCC Part 15.247(d)              | Band Edge                           | PASS |
|     | FCC Part 15.203/15.247 (b)      | Antenna Requirement                 | PASS |

#### Data Rate Used:

Preliminary tests were performed in different data rate to find the worst radiated emission. The data rate shown in the table below is the worst-case rate with respect to the specific test item. Investigation has been done on all the possible configurations for searching the worst cases. The following table is a list of the test modes shown in this test report.

| Test Items   | Mode            | Data Rate | Channel |
|--|-----------------|-----------|---------|
| Maximum Peak Conducted Output Power Power Spectral Density   | 11b/DSSS        | 1 Mbps    | 1/6/11  |
| 6dB Bandwidth  | 11g/OFDM        | 6 Mbps    | 1/6/11  |
| Spurious RF conducted emission Radiated Emission 9KHz~1GHz& Radiated Emission 1GHz~10 <sup>th</sup> Harmonic | 11n(20MHz)/OFDM | 6.5Mbps   | 1/6/11  |
| GAN.   | 11b/DSSS        | 1 Mbps    | 1/11    |
| Band Edge  | 11g/OFDM        | 6 Mbps    | 1/11    |
|  | 11n(20MHz)/OFDM | 6.5Mbps   | 1/11    |

## 3.5 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to TR-100028-01" Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 1" and TR-100028-02 "Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 2 " and is documented in the Shenzhen CTA Testing Technology Co., Ltd. quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for Shenzhen CTA Testing Technology Co., Ltd.:

| Test                  | Range      | Measurement<br>Uncertainty | Notes |
|-----------------------|------------|----------------------------|-------|
| Radiated Emission     | 30~1000MHz | 4.06 dB                    | (1)   |
| Radiated Emission     | 1~18GHz    | 5.14 dB                    | (1)   |
| Radiated Emission     | 18-40GHz   | 5.38 dB                    | (1)   |
| Conducted Disturbance | 0.15~30MHz | 2.14 dB                    | (1)   |

<sup>(1)</sup> This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

CTA TESTING

Report No.: CTA22041400501 Page 10 of 37

# 4 TEST CONDITIONS AND RESULTS

## 4.1 AC Power Conducted Emission

#### **TEST CONFIGURATION**

### **TEST PROCEDURE**

- 1 The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10-2013.
- 2 Support equipment, if needed, was placed as per ANSI C63.10-2013
- 3 All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10-2013
- 4 The EUT received power from adapter, the adapter received AC120V/60Hz and AC 240V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
- 5 All support equipments received AC power from a second LISN, if any.
- 6 The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7 Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.
- 8 During the above scans, the emissions were maximized by cable manipulation.

### **AC Power Conducted Emission Limit**

For intentional device, according to § 15.207(a) AC Power Conducted Emission Limits is as following:

| Fraguency range (MHz)                        | Limit (d   | dBuV)     |
|--|------------|-----------|
| Frequency range (MHz)                        | Quasi-peak | Average   |
| 0.15-0.5                                     | 66 to 56*  | 56 to 46* |
| 0.5-5  | 56         | 46        |
| 5-30   | 60         | 50        |
| * Decreases with the logarithm of the freque | ency.      |           |

### **TEST RESULTS**

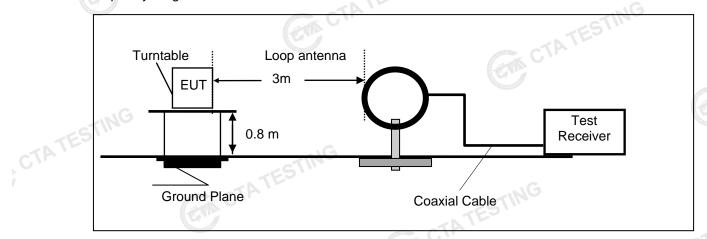

The EUT is Vehicle products, So this test item is not applicable for the EUT.

Report No.: CTA22041400501 Page 11 of 37

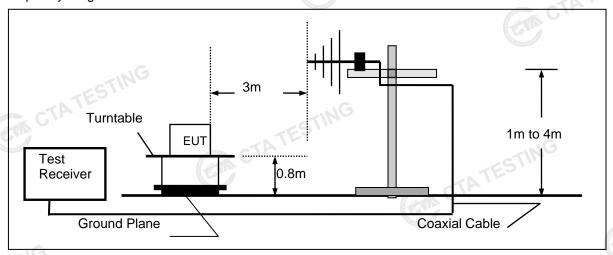

### 4.2 Radiated Emission

### **TEST CONFIGURATION**

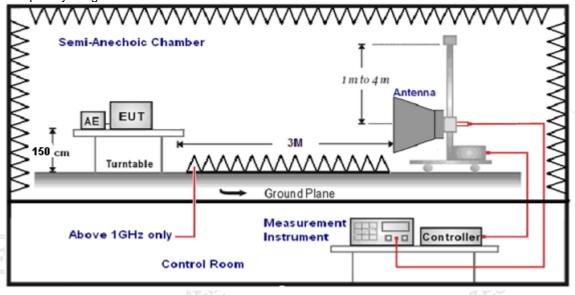

Frequency range 9 KHz - 30MHz

Frequency range 30MHz - 1000MHz

Frequency range above 1GHz-25GHz

### **TEST PROCEDURE**

Report No.: CTA22041400501 Page 12 of 37

- The EUT was placed on a turn table which is 0.8m above ground plane when testing frequency range 9 KHz -1GHz; the EUT was placed on a turn table which is 1.5m above ground plane when testing frequency range 1GHz - 25GHz.
- Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0° to 360° to acquire the highest emissions from EUT.
- And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- Repeat above procedures until all frequency measurements have been completed.
- Radiated emission test frequency band from 9KHz to 25GHz.

6. The distance between test antenna and EUT as following table states:

| Test Frequency range | Test Antenna Type          | Test Distance |
|----------------------|----------------------------|---------------|
| 9KHz-30MHz           | Active Loop Antenna        | 3             |
| 30MHz-1GHz           | Ultra-Broadband Antenna    | 3             |
| 1GHz-18GHz           | Double Ridged Horn Antenna | 3             |
| 18GHz-25GHz          | Horn Anternna              | 1             |

Setting test receiver/spectrum as following table states:

|   | Test Frequency range | Test Receiver/Spectrum Setting         | Detector |
|---|----------------------|--|----------|
| 6 | 9KHz-150KHz          | RBW=200Hz/VBW=3KHz,Sweep time=Auto     | QP       |
|   | 150KHz-30MHz         | QP                                     |          |
|   | 30MHz-1GHz           | RBW=120KHz/VBW=1000KHz,Sweep time=Auto | QP       |
|   |                      | Peak Value: RBW=1MHz/VBW=3MHz,         | TES      |
|   | 1GHz-40GHz           | Sweep time=Auto                        | Peak     |
|   |                      | Average Value: RBW=1MHz/VBW=10Hz,      |          |
|   |                      | Sweep time=Auto                        |          |

### **Field Strength Calculation**

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor(if any) from the measured reading. The basic equation with a sample calculation is as follows:

# FS = RA + AF + CL - AG

| sample calculation is as follows: |  |
|-----------------------------------|--|
| FS = RA + AF + CL - AG            | TATESTING                                  |
| Where FS = Field Strength         | CL = Cable Attenuation Factor (Cable Loss) |
| RA = Reading Amplitude            | AG = Amplifier Gain                        |
| AF = Antenna Factor               | C  |

Transd=AF +CL-AG

#### **RADIATION LIMIT**

For intentional device, according to § 15.209(a), the general requirement of field strength of radiated emission from intentional radiators at a distance of 3 meters shall not exceed the following table. According to § 15.247(d), in any 100kHz bandwidth outside the frequency band in which the EUT is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the100kHz bandwidth within the band that contains the highest level of desired power.

The pre-test have done for the EUT in three axes and found the worst emission at position shown in test setup photos.

| Frequency (MHz) | Distance<br>(Meters) | Radiated (dBμV/m)                | Radiated (µV/m) |
|-----------------|----------------------|----------------------------------|-----------------|
| 0.009-0.49      | 3                    | 20log(2400/F(KHz))+40log(300/3)  | 2400/F(KHz)     |
| 0.49-1.705      | 3                    | 20log(24000/F(KHz))+ 40log(30/3) | 24000/F(KHz)    |
| 1.705-30        | 3                    | 20log(30)+ 40log(30/3)           | 30              |
| 30-88           | 3                    | 40.0                             | 100             |
| 88-216          | 3                    | 43.5                             | 150             |
| 216-960         | 3                    | 46.0                             | 200             |
| Above 960       | 3                    | 54.0                             | 500             |

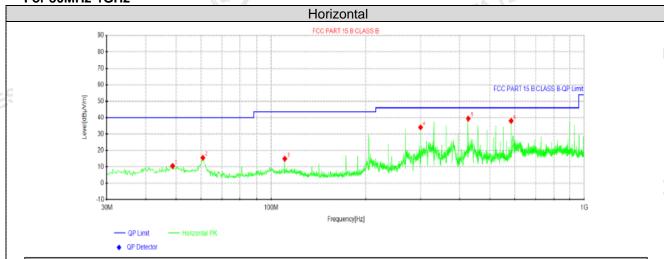

#### **TEST RESULTS**

Page 13 of 37 Report No.: CTA22041400501

#### Remark:

- This test was performed with EUT in X, Y, Z position and the worse case was found when EUT in X position.
- All three channels (lowest/middle/highest) of each mode were measured below 1GHz and recorded worst 2. case at 802.11b low channel.
- Radiated emission test from 9 KHz to 10th harmonic of fundamental was verified, and no emission found except system noise floor in 9 KHz to 30MHz and not recorded in this report.

Report No.: CTA22041400501 Page 16 of 37

- 1) Emission level (dBuV/m) = Meter Reading+ antenna Factor+ cable loss- preamp factor.
- 2) Margin value = Limits-Emission level.
- 3) -- Mean the PK detector measured value is below average limit.
- 4) The other emission levels were very low against the limit.
- RBW1MHz VBW3MHz Peak detector is for PK value; RBW 1MHz VBW10Hz Peak detector is for AV 5)

### Results of Band Edges Test (Radiated)

Note: 802.11b/802.11g/802.11n (H20) Mode all have been tested, only worse case 802.11b mode is reported

# **Power Spectral Density**

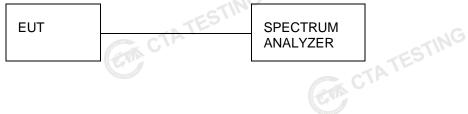

### Limit

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

#### **Test Procedure**

- 1. Use this procedure when the maximum peak conducted output power in the fundamental emission is used to demonstrate compliance.
- 2. Set the RBW ≥ 3 kHz.
- Set the VBW ≥ 3× RBW.
- CTATESTING 4. Set the span to 1.5 times the DTS channel bandwidth.
- Detector = peak.
- Sweep time = auto couple.
- 7. Trace mode = max hold.
- 8. Allow trace to fully stabilize.
- 9. Use the peak marker function to determine the maximum power level.
- 10. If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.
- 11. The resulting peak PSD level must be 8dBm.

## **Test Configuration**

#### 4.5 6dB Bandwidth

#### <u>Limit</u>

For digital modulation systems, the minimum 6 dB bandwidth shall be at least 500 kHz

### **Test Procedure**

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 100 KHz RBW and 300 KHz VBW. The 6dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 6dB.

### **Test Configuration**

### **Out-of-band Emissions**

### Limit

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF con-ducted or a radiated measurement, pro-vided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter com-plies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required.

### **Test Procedure**

Connect the transmitter output to spectrum analyzer using a low loss RF cable, and set the spectrum analyzer to RBW=100 kHz, VBW= 300 kHz, peak detector, and max hold. Measurements utilizing these setting are CTA TESTING made of the in-band reference level, bandedge and out-of-band emissions.

### **Test Configuration**

### **Test Results**

Remark: The measurement frequency range is from 30MHz to the 10th harmonic of the fundamental frequency. The lowest, middle and highest channels are tested to verify the spurious emissions and bandage measurement data. And record the worst data in the report.

Test plot as follows: CTATESTING
