SAR Exclusion Letter

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] $* \cdot [\sqrt{f(GHz)}] \le 3.0$

The tune-up power is -1.3 dBm +/- 0dB, therefore the highest tune-up power is

-1.3 dBm

(0.74 mW)

@ 2478 MHz

Date of Issue: July 02, 2015

When the minimum *test separation distance* is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

So,

 $(0.74 \text{mW} / 5 \text{mm}) * (2.478 \text{GHz} ^0.5) = 0.2$

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] * [$\sqrt{f}(GHz)$] = 0.2 < 3.0

Therefore, standalone SAR measurements are not required for both head and body.
