

## Description Of Differences

Symbol Technologies is inserting the Motorola Inc. FCC Part 90 approved Datatac radio module (FCC ID:MKMPW1100-1) into the Symbol PDT7530 hand held portable data terminal. The new product will be known as the PDT7530 Diamond WAN terminal with Datatac radio.

Symbol is applying for a new FCC ID Number H9PPDT7530.

The Symbol Technologies Inc. PDT 7530 is based on the Symbol Technologies Inc. Diamond (PDT7500 series) terminal with a Motorola Datatac radio module imbedded inside. The Symbol terminal is a handheld portable data terminal with WAN capability supplied by the Motorola Type 3 Datatac radio module.

The Motorola 505sd Datatac module is being used with no changes at all from the Motorola Inc. approved unit. The only difference is the cable from module to the antenna and the antenna itself. The antenna is a unity gain antenna described in more detail in the antenna exhibit.
