### **Applicant's declaration concerning RF Radiation Exposure**

We hereby indicate that the product  
Product description: Bluetooth Keyboard  
Model No: QWERTYX-V2  
FCC ID: PYW-QWERTYX-V2

The equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. The integral antennas used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter within the host device.

A safety statement concerning minimum separation distances from enclosure of the Product : Bluetooth Keyboard will be integrated in the user's manual to provide end-users with transmitter operating conditions for satisfying RF exposure compliance.

The appropriate information can be drawn from the test report no: HA150352-RA and the accompanying calculations:

According to KDB 447498 D01 General RF Exposure Guidance v05r02, the 1-g SAR test exclusion thresholds for 100MHz to 6GHz at test separation distances of 50mm are determined by:

$$[(\text{max. power of channel, including tune-up tolerance, mW})/(\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0 \text{ for 1-g SAR, where}$$

min. test separation distance: 5 mm

Frequency: 2.402 GHz

$$(0.0132 \text{ mW/5mm}) \times \sqrt{2.402\text{GHz}} = 0.004092 < 3$$

Result of Calculation:

The result of calculation is far below 3 . Therefore, SAR test is not required.
