RE: FCC ID: QTKRM-79_ATCB003061
Attention: Ernest Mayer

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please explain how the worse case emissions mode was determined.
2. Please note that page 4 of the report EXHIBIT_6e_QTKRM-79_Salo_FCC_0545_09_Revised.pdf states WCDMA mode in the 850MHz band. However, the device does not seem capable of this mode. Please explain.
3. Please note that the SAR report states the highest EIRP for WCDMA at channel 9262 was with the slide open and 20.5dBm. However, the EMC report states the highest EIRP at in this configuration was 21.5dBm. Please note that while EIRP differences may be up to 3dB between the SAR and EMC reports, it is generally expected that the SAR report would show the higher power when such differences occur. As the SAR report shows 1dB lower, please explain and please verify that SAR was done at the maximum power out of the device for this configuration.
4. Please justify worse case configurations for WCDMA configurations.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
