## To Whom It May Concern:

Intermec Technologies Corporation hereby declares that our Model 700C Pen Computer for Data Collection with internal FCC Part 15 - 2.4 GHz DSSS transceiver, internal FCC Part 22.901(d) - 824 MHz transceiver, and Intermec IP3 add on RFID scanner FCC Part 15 - 902 MHz FHSS transceiver is described as the equipment under test (EUT). This EUT is categorically excluded from routine environmental evaluation for RF exposure by its classification as a Part 15/22.901(d) handheld mobile radio operating with approximately 915.4 mW ERP. Their summed ERP is less than 1.5 watts, therefore the EUT is categorically excluded from routine environmental evaluation per 47 CFR 2.1091(c).

Intermec Technologies Corporation hereby declares that our Model 700C Pen Computer for Data Collection with internal FCC Part 15 - 2.4 GHz DSSS transceiver, internal FCC Part 24E - 1800 MHz transceiver, and Intermec IP3 add on RFID scanner FCC Part 15 - 902 MHz FHSS transceiver is described as the equipment under test (EUT). This EUT is categorically excluded from routine environmental evaluation for RF exposure by its classification as a Part 15/24E handheld mobile radio operating with approximately 985.9 mW ERP. Their summed ERP is less than 3 watts, therefore the EUT is categorically excluded from routine environmental evaluation per 47 CFR 2.1091(c).

Note: The radio FCC ID: HN2ABTM3-3 cannot operate simultaneously with the IP3. The operation detail is contained within this application. Since the product would be configured for sale with the above listed radios, this clarification is required for co-located transmitter identification.

The attached tables showing MPE evaluation of the product with antenna options. Each radio band has specific a maximum permissible exposure (MPE) as stated in 47 CFR 1.1310. Refer to the limits shown in the calculation tables for details.

The general calculation for exposure at a distance of 20-cm (8-inch) distance is shown in the equation below.

 $S = (PG)/4 \pi R^2$ 

Where:  $S = power density (mW/cm^2)$ P = power input to the antenna (mW)

G = linear power gain relative to an isotropic radiator

R = distance to the center of the radiation of the antenna (20 cm = limit for MPE estimates)

Solving for S, the maximum power densities 20 cm from the transmitting antennas are contained within the following pages.

Sincerely,

EMC Engineer

## **EIRP Calculation of RF Exposure**

FCC ID: HN2SB555-2 CDMA Radio Modem

Antenna options of the 700C below show the external dual band dipole at 824 MHz is worst case. Calculation for exposure at 20cm distance

				Peak		Pwr Density	Pwr Density	
				Conducted		@ 20cm	Limit	Power
	Antenna	Antenna Part	Transmit Freq.	Power	Gain	200	2	Density
Antenna Description	Type	No.	(MHz)	(mW)	(dBi)	mW/cm <sup>2</sup>	mW/cm <sup>2</sup>	Ratio
External dual band 800/1850	dipole	805-606-002	824	224.0	3	0.0889	0.55	0.1617
Ext. dual band 800/1850	dipole	805-606-002	1850	224.0	3	0.0889	1.0	0.0889
Ext. single band 1850	dipole	805-606-004	1850	224.0	4	0.1119	1.0	0.1119

FCC ID: HN22011B-2

Internal antenna for the 700C.

802.11b Radio

Calculation for exposure at 20cm distance

## Co-Located Transmitter Calculation of RF Exposure

Per FCC TCB Training April 3, 2002

"Devices operating in multiple frequency bands

When RF exposure evaluation is required for TCB approval

Separate antennas – estimated minimum separation distances may be considered for the frequency bands that do not require evaluation or TCB approval, however, the estimated distance should take into account the effect of co-located transmitters. (Note 24)

Note 24 According to multiple frequency exposure criteria, the ratio of field strength or power density to the applicable exposure limit at the exposure location should be determined for each transmitter and the sum of these ratios must not exceed 1.0 for the location to be compliant."

Worst Case Exposure for 700C when using internal co-located transmitters with IP3 RFID scan handle option. Calculation for exposure at 20cm distance

				Peak		Pwr Density	Pwr Density

							ratio limit	
Total				·	•		1.0	0.4492

The worst case configuration for all combinations of co-located transmitters and antennas are shown. In all cases the ratio of exposure compared the limit when totaled does not exceed 1.0.

## **ERP Calculation of RF Exposure**

ERP is sometimes preferred. The calculation as the Sum of the ERP of the co-located transmitters is in the table below. ERP TX1 + ERP TX2 + ERP TX3

Worst Case Exposure for 700C when using internal co-located transmitters with IP3 RFID scan handle option. Calculation for exposure at 20cm distance

						Pwr Density	Pwr Density	
				ERP		@ 20cm	Limit	Power
