

Regarding test report inquiry regarding secondary transmit frequency shown in plots just below the declared transmit frequency of 5870 MHz.

Reply from Lab:

The lower frequency is not related to this 5870 MHz transmitter device. The device operates on a single channel at 5870 MHz, but the onboard certified Wi-Fi module can simultaneously transmit and can be seen in the graph. An MPE report has been submitted to cover the RF Exposure of the simultaneous transmission
