

ATW- T 701/ T 702

Description of circuits to suppress spurious emissions

- The output filter comprised of L204, L205, L206, L207, C224, C225, C226 & C227 suppresses the output harmonics and output to the antenna.

Description of circuits to stabilize frequency

- The frequency of VCO is controlled by PLL IC which used the crystal oscillator with high accuracy, and frequency is stabilized.
