

Mr. Joe Dichoso  
Ref: FCC ID: AAO2101850; Radio Shack  
Correspondence Ref: #15939

Regarding the referenced inquiry:

The referenced device is a FRS product configured for mobile use. It consists of a transmitter and all RF circuitry contained within a single housing. The antenna is integral to that housing; it can not be detached from the housing by the user. The control circuitry, display, speaker and microphone are contained in a second housing that is permanently attached to the transmitter housing with a non-detachable cable. **It is not possible for the user to replace, extend or modify the cable between the microphone housing and the transmitter housing.** By designing the unit in this way, we believe that this product complies with the strictest interpretation of Para. 95.647.
