Maximum Permissible Exposure (MPE) & Exposure evaluation

Report identification number: 1-9218/19-01-15-A MPE (FCC_ISED)

Certification numbers and labeling requirements	
FCC ID	Y82-DA14AVD
ISED number	9576A-DA14AVD
HVIN (Hardware Version Identification Number)	DA14AVDDECT SF01
PMN (Product Marketing Name)	DA14AVDDECT
FVIN (Firmware Version Identification Number)	Fixed Part Radio Module, Portable Part Radio Module
HMN (Host Marketing Name)	-/-

This report is electronically signed and valid without handwriting signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

Version	Applied Changes	Date of Release
	Initial Release	2020-08-26
-A	Added FVIN.	2020-09-10

EUT technologies:

Technologies:	Max. peak power [dBm]		Antenna gain max.: [dBi] *	Declared by customer
	Conducted *	EIRP *		
UPCS 1925	decl. 19.0 meas. 18.0	decl. 19.0 meas. 18.0	0.0	18.0 dBm +/-1 dB

)* worst case result see CTC advanced test report 1-9218/19-01-07 (FP) and 1-9218/19-01-13 (PP)

Prediction of MPE limit at given distance - FCC

Equation from page 18 of OET Bulletin 65, Edition 97-01

$S = PG / 4\pi R^2$

where: S = Power density
P = Power input to the antenna
G = Antenna gain
R = Distance to the center of radiation of the antenna
PG = Output Power including antenna gain

The table below is excerpted from Table 1B of 47 CFR 1.1310 titled “Limits for Maximum Permissible Exposure (MPE), Limits for General Population/Uncontrolled Exposure”

Frequency Range (MHz)	Power Density (mW/cm^2)	Averaging Time (minutes)
300 -1500	f/1500	30
1500 - 100000	1.0	30

where f = Frequency (MHz)

Prediction: worst case

	Technologies:	UPCS	
	Frequency (MHz)	1925	
PG	Declared max power (EIRP)	19	dBm
R	Distance	20	cm
S	MPE limit for uncontrolled exposure	1	mW/cm^2
	Calculated Power density:	0.0158	mW/cm^2
	Calculated percentage of Limit:	1.58%	

This prediction demonstrates the following:

The power density levels for FCC at a distance of 20 cm are below the maximum levels allowed by regulations.

Prediction of MPE limit at given distance - ISED

RSS-102, Issue 5, 2.5.2

RF exposure evaluation is required if the separation distance between the user and/or bystander and the device's radiating element is greater than 20 cm, except when the device operates as follows:

- below 20 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 1 W (adjusted for tune-up tolerance);
- at or above 20 MHz and below 48 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than $4.49/f^{0.5}$W (adjusted for tune-up tolerance), where f is in MHz;
- at or above 48 MHz and below 300 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 0.6 W (adjusted for tune-up tolerance);
- at or above 300 MHz and below 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than $1.31 \times 10^{-2}\ f^{0.6834}$ W (adjusted for tune-up tolerance), where f is in MHz;
- at or above 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 5 W (adjusted for tune-up tolerance).

Prediction: worst case

		0.3 - 6 GHz	
	Frequency	1925	MHz
R	Distance	20	cm
P	Max power input to the antenna	19	dBm
G	Antenna gain	0	dBi
PG	Maximum EIRP	19	dBm
PG	**Maximum EIRP**	79.4	mW
	Exclusion Limit from above:	2.30	W
	Calculated percentage of Limit:	3.45%	

Conclusion: RF exposure evaluation is not required.
