# **GENERAL INFORMATION**

#### **Product Description for Equipment under Test (EUT)**

The UNNECTO HOLDING LIMITED's product, model number: U150(FCC ID: 2ADR3U150) or the "EUT" in this report was a 2G Mobile Phone, which was measured approximately: 110 mm (L)  $\times$  41 mm (W)  $\times$  15 mm (H), rated with input voltage: DC 3.7V battery and DC 5V from adaptor.

Adaptor Information: Model:CU-150 Input: AC 100-240V 50/60Hz 150mA Output: DC 5.0V-700mA

\*All measurement and test data in this report was gathered from production sample serial number: 1602277. (Assigned by Shenzhen BACL). The EUT supplied by the applicant was received on 2016-05-16.

#### Objective

This test report is prepared on behalf of *UNNECTO HOLDING LIMITED* in accordance with Part 2-Subpart J, Part 15-Subparts A, B and C of the Federal Communication Commissions rules.

The tests were performed in order to determine compliance with FCC Part 15, Subpart C, section 15.203, 15.205, 15.207, 15.209 and 15.247 rules.

This is a class II permissive change base on the original report STS1511011F02 with FCC ID: 2ADR3U150 which was granted on 2015-11-30 for changing an adapter, so the change will just affect the test data of "AC Line Conducted Emissions and Radiated Emissions below 1 GHz", all the other test data can be referred to the original report STS1511011F02.

#### **Related Submittal(s)/Grant(s)**

FCC Part 15B JBP submissions with FCC ID: 2ADR3U150

#### **Test Methodology**

All measurements contained in this report were conducted with ANSI C63.10-2013, American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices.

All emissions measurement was performed at Bay Area Compliance Laboratories Corp. (Shenzhen). The radiated testing was performed at an antenna-to-EUT distance of 3 meters.

Measurement uncertainty with radiated emission is 5.81 dB for 30MHz-1GHz, and 4.88 dB for above 1GHz, 1.95dB for conducted measurement.

#### **Test Facility**

The test site used by Bay Area Compliance Laboratories Corp. (Shenzhen) to collect test data is located on the 6/F, the 3<sup>rd</sup> Phase of WanLi Industrial Building, ShiHua Road, FuTian Free Trade Zone Shenzhen, Guangdong, China.

Test site at Bay Area Compliance Laboratories Corp. (Shenzhen) has been fully described in reports submitted to the Federal Communication Commission (FCC). The details of these reports have been found to be in compliance with the requirements of Section 2.948 of the FCC Rules on October 31, 2013. The facility also complies with the radiated and AC line conducted test site criteria set forth in ANSI C63.10-2013.

The Federal Communications Commission has the reports on file and is listed under FCC Registration No.: 382179. The test site has been approved by the FCC for public use and is listed in the FCC Public Access Link (PAL) database.

# SYSTEM TEST CONFIGURATION

# **Description of Test Configuration**

The system was configured for testing in engineering mode.

#### **EUT Exercise Software**

N/A

### **Special Accessories**

No special accessory.

### **Equipment Modifications**

No modification was made to the EUT tested.

# **Support Equipment List and Details**

| Manufacturer | Description | Model | Serial Number |
|--------------|-------------|-------|---------------|
| /            | /           | /     | /             |

# External I/O Cable

| Cable Description                        | Length (m) | From Port | То       |

| §15.247(b)(1)                    | Peak Output Power Measurement    | Compliance* |
| §15.247(d)                       | Band edges                       | Compliance* |

Compliance\*: Please refer to the original report STS1511011F02 with FCC ID: 2ADR3U150 which was granted on 2015-11-30

# FCC §15.207 (a) – AC LINE CONDUCTED EMISSIONS

# Applicable Standard

FCC §15.207(a)

### **Measurement Uncertainty**

Input quantities to be considered for conducted disturbance measurements maybe receiver reading, attenuation of the connection between LISN and receiver, LISN voltage division factor, LISN VDF frequency interpolation and receiver related input quantities, etc.

Based on CISPR 16-4-2:2011, the expended combined standard uncertainty of conducted disturbance test at Bay Area Compliance Laboratories Corp. (Shenzhen) is shown as below. And the uncertainty will not be taken into consideration for the test data recorded in the report.

| Port     | Expanded Measurement uncertainty       |
|----------|--|
| AC Mains | 3.34 dB (k=2, 95% level of confidence) |
| CAT 3    | 3.72 dB (k=2, 95% level of confidence) |
| CAT 5    | 3.74 dB (k=2, 95% level of confidence) |
| CAT 6    | 4.54 dB (k=2, 95% level of confidence) |

# **EUT Setup**

2. Both of LISNs (AMN) 80 cm from EUT and at the least 80 cm from other units and other metal planes support units.

The measurement procedure of EUT setup is according with ANSI C63.10-2013. The related limit was specified in FCC Part 15.207.

The spacing between the peripherals was 10 cm.

FCC Part 15.247

# **EMI Test Receiver Setup**

The EMI test receiver was set to investigate the spectrum from 150 kHz to 30 MHz.

During the conducted emission test, the EMI test receiver was set with the following configurations:

| Frequency Range  | IF B/W |  |
|------------------|--------|--|
| 150 kHz – 30 MHz | 9 kHz  |  |

# **Test Procedure**

Maximizing procedure was performed on the six (6) highest emissions of the EUT.

All final data was recorded in the Quasi-peak and average detection mode.

# **Test Equipment List and Details**

| Manufacturer             | Description                 | Model  | Serial Number              | Calibration<br>Date | Calibration<br>Due Date |

| Rohde & Schwarz          | CE Test software            | EMC 32 | V8.53                      | NCR                 | NCR                     |

\* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Shenzhen) attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

# **Corrected Factor & Margin Calculation**

The Corrected factor is calculated by adding LISN VDF (Voltage Division Factor), Cable Loss and Transient Limiter Attenuation. The basic equation is as follows:

Correction Factor = LISN VDF + Cable Loss + Transient Limiter Attenuation

The "**Margin**" column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7 dB means the emission is 7 dB below the limit. The equation for margin calculation is as follows:

Margin = Limit – Corrected Amplitude

#### **Test Results Summary**

According to the recorded data in following table, the EUT complied with the FCC Part 15.207, the worst margin reading as below:

### 4.7dB at 0.230500 MHz in the Neutral conducted mode

Refer to CISPR16-4-2:2011 and CISPR 16-4-1:2009, the measured level complies with the limit if

 $L_{\rm m} + U_{(L{\rm m})} \leq L_{\rm lim} + U_{\rm cispr}$ 

In BACL,  $U_{(Lm)}$  is less than  $U_{cispr}$ , if  $L_m$  is less than  $L_{lim}$ , it implies that the EUT complies with the limit.

#### **Test Data**

#### Note:

1) Correction Factor =LISN VDF (Voltage Division Factor) + Cable Loss + Transient Limiter Attenuation

2) Corrected Amplitude = Reading + Correction Factor
3) Margin = Limit - Corrected Amplitude

# FCC §15.205, §15.209 & §15.247(d) – RADIATED EMISSIONS

#### **Applicable Standard**

FCC §15.205; §15.209; §15.247(d)

#### **Measurement Uncertainty**

All measurements involve certain levels of uncertainties, especially in field of EMC. The factors contributing to uncertainties are spectrum analyzer, cable loss, antenna factor calibration, antenna directivity, antenna factor variation with height, antenna phase center variation, antenna factor frequency interpolation, measurement distance variation, site imperfections, mismatch (average), and system repeatability.

Based on CISPR 16-4-2:2011, the expended combined standard uncertainty of radiation emissions at Bay Area Compliance Laboratories Corp. (Shenzhen) is 5.81 dB for 30MHz-1GHz, and 4.88 dB for above 1GHz. And this uncertainty will not be taken into consideration for the test data recorded in the report.

#### **EUT Setup**

#### Below 1 GHz:

FCC Part 15.247

The radiated emission tests were performed in the 3 meters, using the setup accordance with the ANSI ANSI C63.10-2013. The specification used was the FCC 15.209, 205 and FCC 15.247 limits.

# EMI Test Receiver & Spectrum Analyzer Setup

The system was investigated from 30 MHz to 1 GHz.

During the radiated emission test, the EMI test receiver & Spectrum Analyzer Setup were set with the following configurations:

| Frequency Range   | RBW     | Video B/W | IF B/W  | Detector |
|-------------------|---------|-----------|---------|----------|
| 30 MHz – 1000 MHz | 100 kHz | 300 kHz   | 120 kHz | QP       |

#### **Test Procedure**

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

All final data was recorded in Quasi-peak detection mode for frequency range of 30 MHz -1 GHz.

### **Corrected Amplitude & Margin Calculation**

The Corrected Amplitude is calculated by adding the Antenna Factor and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

Corrected Amplitude = Meter Reading + Antenna Factor + Cable Loss - Amplifier Gain

The "**Margin**" column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7dB means the emission is 7dB below the limit. The equation for margin calculation is as follows:

Margin = Limit – Corrected Amplitude

\* **Statement of Traceability:** Bay Area Compliance Laboratories Corp. (Shenzhen) attests that all calibrations have been performed in accordance to requirements that traceable to National Primary Standards and International System of Units (SI).

#### **Test Results Summary**

According to the recorded data in following table, the EUT complied with the FCC Title 47, Part 15, Subpart C, section 15.205, 15.209 and 15.247.

#### 9.24 dB at 38.535750 MHz in the Vertical polarization

Refer to CISPR16-4-2:2011 and CISPR 16-4-1:2009, the measured level complies with the limit if

 $L_{\rm m}$  ++  $U_{(Lm)} \leq L_{\rm lim}$  ++  $U_{\rm cispr}$ 

In BACL,  $U_{(Lm)}$  is less than +  $U_{cispr}$ , if  $L_m$  is less than  $L_{lim}$ , it implies that the EUT complies with the limit.

# **Test Data**

# **Environmental Conditions**

| Temperature:              | 25 °C     |  |  |
|---------------------------|-----------|--|--|
| <b>Relative Humidity:</b> | 45 %      |  |  |
| ATM Pressure:             | 101.0 kPa |  |  |

The testing was performed by Stan Ma on 2016-05-20.

Test mode: Transmitting & Charging
