RE: Lear Corporation

FCC ID: KOBLEARGIPK

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) Please provide a higher resolution schematic. The values/designators were not distinguishable.
- 2) Measurements made using a loop antenna below 30 MHz should be made with the loop antenna positioned in each of 3 axis. It can not be determined from the test report if this was performed. Please confirm if this was performed.
- 3) Emissions within 26 dB of the fundamental are considered as part of the occupied bandwidth of the fundamental and are not considered spurious emissions. Please provide information to show that the levels within the 90 - 110 kHz restricted band are > 26 dB below the fundamental.
- 4) Although all levels meet the limits provided, the field strength levels of the spurious emissions reported for all spurious emissions 500 kHz and higher exceed that of the fundamental at 125 kHz. This is in violation of Section 15.209(c) & 15.215(b) of the Commission's Rules.

Timothy R. Johnson
Examining Engineer

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
