

This application is for bluetooth module PAN1780 (FCC ID: T7V1780 (dated of grant 2020-04-23) and IC: 216Q-1780 (dated of grant 2020-04-23)) to make a C2PC update for FCC ID C3PC for IC.

In this update, a proprietary mode mode Nordic semiconductors 2Mbps was added.

The difference between the BLE mode and the Proprietary mode is in the modulation index, i.e. how far from the carrier frequency the modulated signal will be. In testing this can be seen in the 6 dB BW.
