Tom, I have reviewed the application, and since I don't yet trust the automatic notification system, I am copying the text of a simple request I just sent:

The MPE calculation for 31.2dBi Parabolic indicates 2.57 meter separation but manual only indicates 2 meters. Please revise the manual information to indicate the corrected calculated safe separation distance due to the addition of this higher gain antenna.

Please upload this information and copy me if you would.

Thanks,

Chris

Hi Chris,

Please let me know what the estimated grant date is for this application.

I believe I have uploaded all required documents, but if there is something missing please let me know.

Also, you will note from the attached status page I got today that the status date is a little off - either by a few weeks or a hundred years. Not sure if this is a CCS thing, a Netscape thing, or an Apple Macintosh thing....

best regards

Tom
