"B" IS FOR BEACON

Unlike Wi-Fi products, your Beacons never transmit. Beacons connect to your phone using Bluetooth. Here are a couple of tips to help you get the most out of them:

Proximity: Beacon allows for full local control from up to 20 meters (65 feet) away.

Automation: Beacon is great at home automation. You can set Beacons to turn on when you turn on your phone is not connected.

Group Control: Group your products and control them together. Beacon products can only be grouped with other Beacon products of the same type.

CONTROLLING THROUGH THE APP

- Download the **clbe Suite™** app from the iOS or Android store
- Create an account and log in. Ensure your mobile device is running iOS 10.0 or higher.
- Set your smart plug in pairing mode
- Follow the on-screen instructions
- Ensure all requested permissions are enabled on your mobile device (location, location services).
- On the app's home screen, select the **+** icon in the top-right corner and select "Add a device." If the Beacon is not in pairing mode, the app will detect it within a few seconds. When discovered, select the plug icon, and select "Yes."

CONNECTING

- Set up and enjoy!

ROUTINES *

Timer
Set a countdown for your plug to turn ON or OFF once the timer runs out.

Add a new schedule
Set a time and date for your plug to either turn ON or OFF on a specific day or days of the week.

APP FEATURES

Device sharing
Share access to your connected devices with another clbe Suite™ app user from the same home or account.

Device grouping
Group your connected devices together to create them in unique other turn individually.

Create a Smart Scene
Automate your plug to turn ON or OFF based on factors such as climate, time and other device's status.

HARDWARE SETTINGS

Restart status
Set the default state of the plug when reconnected to the power source. Choose from ON, OFF, or last status.

Light mode
Turn the Beacon's status light on or off.

Child lock
Disable the physical power button.
