

The 24MHz crystal oscillator drives the base The modulation provided by AC6921A.

The output of AC6921A module has the matching network consisting of that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

There is no external ground connection.The ground is only that of the printed current board  
Electric is supplied by a 3.7Volt primary battery.

Feature:

Frequency Range:2402MHz-2480MHz
