

Application No.: _____

Date: 2005-08-22

FCC ID: L5CW040TX

Circuit Description

The 434MHz crystal oscillator drives the base of Q5 the final/buffer amplifier. The modulation provided by IC. The output of Q5 has the matching network consisting of C19 and C24 that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

There is no external antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 3 Volt ("AAA" size battery x 2) primary battery.

Operation Descriptions

The transmitter is a wireless cooking thermometer operating at 434MHz band. The transmitter is powered by a 3Volt battery (AAA x 2) and the transmitting frequency is crystal controlled. The operation is achieved by different combinations of form pulse modulating signal on the 434 carrier frequency.

Remarks:

The transmitter is a Trigger transmitter.

The EUT continues to transmit while Trigger is being pressed.

It is Pulse transmitter, Modulation by Data Code; and type is Pulse modulation.
