

FCC ID: ABZ99FT7002

Power Spectral Density Measurements 15.247(d)

The FCC Rules require the peak power density to be no greater than 8 dBm in any 3 kHz band

The total peak power level of this device is no greater than 1.2 dBm (EIRP). Since the total peak power is 1.2 dBm, the power in any 3 kHz band could not exceed this total level of 1.2 dBm.

Since the power in any 3 kHz band could not exceed 1.2 dBm, this device complies with the power spectral density requirements. No additional measurements should be required to demonstrate compliance.
