The data taken for this test and report herein was done in accordance with FCC Part 15 and measurement Procedures of ANSI C63.4-1992 and were relevant the procedures as specified in the sheets from the FCC attached to this test report. NMI Certin B.V. at Niekerk, The Netherlands, certifies that the data is accurate and contains a true representation of the emission-profile of the Equipment Under Test (EUT) on the date of the test noted in the test report. I have reviewed the test report and find it to be an accurate description of the test(s) performed and the EUT so tested.

1 General information.

1.1 Product description.

The BreezeCOM DS.11 units add wireless functionality to existing Ethernet LANs. Standard Ethernet LAN Stations are wired to a common bus. When one of the stations sends a message, it assigns a destination address to the message and sends the message on the bus. All stations on the bus "hear" the message, but only the station with the proper address processes the message.

The DS.11 range can be sub-divided in the following products:

- Wireless Access Point, type AP-DS.11
- Wireless Station Adapter, type SA-DS.11
- Wireless Base Station, type WBS-DS.11
- Wireless Bridge Client, type WBC-DS.11

The radio part of these products are identical. The digital front-end however differs and determines the functionality of the product. Each product, with its special functionality can operate with one or more external antenna's. The products, with a short explanation and the possible external antenna's are stated below.

Wireless Access Point, type AP-DS.11

Laptop PC's equipped with BreezeCOM PC-DS.11 Wireless LAN PC Cards have full access to the enterprise network from anywhere in the facility where AP-DS.11 Access Points (referred to as EUT1 in this report) are installed. EUT1 is an Access Point to the Local Area Network. Each EUT1 provides an area of coverage of 50-300 square meters, in which PCs and Laptops equipped with the BreezeCOM PC-DS.11 PC Cards can roam freely, whilst maintaining high-speed access to the company's servers and other facilities, such as internet. The air interface is interoperable with IEEE 802.11.

The following antennas can be used with this system:

antenna model number	description	declared gain
OMNI-2	dipole antenna	2 dBi
OMNI-6	dipole antenna with cable assembly	5 dBi

These antennas can only be connected to the AP-DS.11 by means of dedicated antenna connector.

Wireless Station Adapter, type SA-DS.11

Ethernet-based devices such as printer, iMac and workstations can be connected to the SA-DS.11 Station Adapter (referred to as EUT2 in this report), giving them full access to the enterprise network from anywhere in the facility where BreezeCOM AP-DS.11 Access Points are installed. Using standard RJ-45 connectors any Ethernet-based device can be connected to the SA-DS.11 providing access to the wireless LAN through two integrated antennas. The SA-DS.11 features high-speed wireless connection, up to 11 Mbps. The air interface is interoperable with IEEE 802.11. The EUT2 is powered from the included external 9V power supply.

The following antennas can be used with this system:

antenna model number	description	declared gain
OMNI-2	dipole antenna	2 dBi
OMNI-6	dipole antenna with cable assembly	5 dBi

These antennas can only be connected to the SA-DS.11 by means of dedicated antenna connector.

FCC ID: LKT-DS11
Description of EUT: 2.4 GHz RLAN SERIES
Manufacturer: No Wires Needed B.V.
Brand mark: BreezeCOM
Types: AP-DS.11, SA-DS.11,
WBS-DS.11, WBC-DS.11

Wireless Bridge Server, type WBS-DS.11

The BreezeCOM Wireless bridge server, type WBS-DS.11 (referred to as EUT3 in this report), functions as an extension of any Ethernet network. Any second network with-in the range of the EUT3 and equipped with the WBC-DS.11 can be wireless linked with the network where the EUT3 is connected. The EUT3 features a high-speed connection of 11Mbps and the AirLock™ security system. The air interface is interoperable with IEEE802.11 and the Ethernet interface interoperable with IEEE802.3. The EUT3 is powered by an external power supply. Multiple antennas are available with the unit that varies in directivity and gain. The highest gain antenna available is 24dBi. The antennas are coupled via a unique connector to the EUT3.

The following antennas can be used with this system:

antenna model number	description	declared gain
OMNI-7.2	antenna with 20ft cable	6 dBi
UNI-8.5 (ord. nr. 872109/909)	antenna with 8ft cable	6.5 dBi
UNI-9 (part nr. 811909)	antenna with cable	7.5 dBi
UNI-18	antenna with 30ft cable	15 dBi
UNI-24	antenna with 50ft cable	19 dBi

These antennas can only be connected to the WBS-DS.11 by means of dedicated antenna connector.

Wireless Bridge Client, type WBC-DS.11

The BreezeCOM Wireless Bridge Client, type WBC-DS.11 (referred to as EUT4 in this report), functions as an extension of any Ethernet network. Any second network with-in the range of the WBS-DS.11 and equipped with EUT4 can be wireless linked with the network where the WBS-DS.11 is connected. The EUT4 features a high-speed connection of 11Mbps and the AirLock™ security system. The air interface is interoperable with IEEE802.11 and the Ethernet interface interoperable with IEEE802.3. Ethernet interface interoperable with IEEE802.3.

The EUT4 is powered by an external power supply. Multiple antennas are available with the unit that varies in directivity and gain. The highest gain antenna available is <25dBi. The antennas are coupled via a unique connector to the EUT4.

The following antennas can be used with this system:

antenna model number	description	declared gain
OMNI-7.2	antenna with 20ft cable	6 dBi
UNI-8.5 (ord. nr. 872109/909)	antenna with 8ft cable	6.5 dBi
UNI-9 (part nr. 811909)	antenna with cable	7.5 dBi
UNI-18	antenna with 30ft cable	15 dBi
UNI-24	antenna with 50ft cable	19 dBi

These antennas can only be connected to the WBC-DS.11 by means of dedicated antenna connector.

* EUT4 will represent all possible products, mentioned under § 1.1, with the exception of two external antennas OMNI-2 and OMNI-6. These antennas can only be connected to product AP-DS.11 and SA-DS.11. Pre-tests showed EUT4 to be the worst case.

To demonstrate compliance for the two OMNI antennas type OMNI-2 and OMNI-6, the significant part of the test-results with EUT2 has been reported.

1.4 Test Methodology.

The test methodology used has been based on the requirements of FCC Part 15 (10-1-97 Edition), relevant clauses 15.205, 15.207, 15.209 and 15.247. The used measuring methods are based on the ANSI C63.4-1992 document.

Radiated tests above 30 MHz were performed at a distance of 3 meter. Below 30 MHz the measurement was carried out on a distance of 10 meter. The eventual found results will be calculated to values for the required measuring distance of 30/300 meter.

Fieldstrength measurements on frequencies above 1 GHz were measured with appropriate pre-amplifiers, antennas and a spectrum analyzer. On found frequencies the actual level at the input of the pre-amplifier was generated with aid of a signal generator. The output level of the signal generator was increased with the antenna-factor to obtain the fieldstrength.

1.5 Test Facility

The FCC has per Public Notice declared that the measurement facilities located at the NMI Certin B.V. Testsite Niekerk, Smidshornerweg 18, The Netherlands, has been reviewed and found to be in compliance with the requirements of section 2.948 (previously section 15.38) of the FCC rules per August 2, 1994.

The description of the measuring facilities have been filed with reference 31040/SIT, 1300B3 at the FCC's Offices.

1.7 Bandwidth and antenna factors.

The utilized measuring equipment is stated in § 1.6. The bandwidth of the receiver switches automatically to the right bandwidth in accordance with CISPR 16. This is implemented in the receiver. Also the antenna factors are included in the test receiver. The receiver automatically calculates the appropriate correction factor for the utilized antenna and also the appropriate correction factor for the cable loss. The total correction is automatically added to the measured value.

2 Product labelling.

2.1 FCC ID Label

The following label shall be attached to the device under test.

FCC ID: LKT-DS11

This Device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

Figure 2.1. FCC ID Caller

The dimensions of the label, the location of the label and the type of font can be found in the FCC regulation book CFR 47, parts 0 to 19, revised as per October 1, 1993.

2.2 Location of the FCC ID Label on the EUT

The FCC ID Label will be placed on the backside of the Radio LAN DS.11 products

See attached documentation-sheet for more detailed information.

3 System test configuration.

3.1 Justification.

The system was configured for testing in a typical fashion (as a customer would normally use it)

The justification of cables and equipment has been carried out as prescribed in the ANSI C63.4-1992 document.

The products mentioned under § 1.1 uses the same RF part. Only the digital front-end differs. Pre-tests on all the products showed that the testresults are the same within a margin. These pre-tests have been carried out to find the worst-case. The worst-case product, EUT4, will represent all possible products, mentioned under § 1.1, with the exception of two external antennas OMNI-2 and OMNI-6. These antennas can only be connected to product AP-DS.11 and SA-DS.11. To demonstrate compliance for the two OMNI antennas type OMNI-2 and OMNI-6, the significant part of the test-results with EUT2 has been reported.

Unless otherwise stated, the measurements were performed on the lowest operating frequency (channel 1: 2412 MHz), the operating frequency in the middle of the specified frequency band (channel 6: 2437 MHz) and the highest operating frequency (channel 11: 2462 MHz).

Operating frequencies and rated output power levels

channel	operating frequencies (MHz)	Rated output power (dBm)	test performed
1	2412	20	yes
2	2417	20	no
3	2422	20	no
4	2427	20	no
5	2432	20	no
6	2437	20	yes
7	2442	20	no
8	2447	20	no
9	2452	20	no
10	2457	20	no
11	2462	20	yes

Table 3.1: Operating frequencies and rated output power levels

To complete the configuration required by the FCC, the transmitter was tested with a laptop PC as network server.

3.2 EUT exercise software.

The EUT was enabled to continuously transmit, which was verified by a receiving unit during testing. The carrier was also checked to verify that the information was being transmitted.

3.3 Special accessories.

No special accessories are used to achieve FCC compliance.

3.4 Equipment modifications.

No modifications have been made to the equipment to achieve compliance.

3.5 Configuration of the tested system.

Blockdiagrams of the tested system are included in Annex 3 attached to this report.

4 Block diagram(s) of the tested model.

Information is annexed in the technical documentation supplied by the applicant.

5 Conducted emission data.

The initial step in collecting data is a scan of the measurement range. Significant signals are then marked and these signals are then measured using quasi-peak.

Line 1

Plot 5.1: Conducted emissions on channel 6.

The following table lists worst case conducted emission data in accordance with FCC 15.207. The conducted test was performed with the EUT exercise program loaded. Photographs of test setups used are included in annex 1 attached to this report.

8 Peak power

The peak power measurement was performed in accordance with FCC 15.247 (b). The plot is made with the highest bandwidth being the worst case. The maximum value is then marked and the peak value of this signal is measured using a diode detector.

12 Processing gain

The processing gain as mentioned in FCC 15.247 (e) is measured using the CW jamming margin method.

The measurement results are reported in addendum 1 to this report with report number 10104783.R01 Rev. 1.
