Chapter I Instructions for Use

1.1 Precautions for Laser Scanning Engine

Laser radiation, please do not look directly at the laser beam.

1.2 Safety Precautions

- Your device can only use the battery and charger specified by Seuic; using other products may cause battery leakage, overheating, bursting or fire.
- Do not short-circuit the charger, otherwise, it may cause electric shock, smoke and damage to the charger.
- Please do not use the charger when the power cord is damaged; otherwise, it may cause fire and electric shock.
- Please do not disassemble or modify the charger; otherwise, it may cause personal injury, electric shock, fire and damage to the charger.
- Hold the charger when unplugging. Directly pulling the power cord will damage it, causing electric shock and fire.
- Clean the device, battery and charger with a soft and dry cloth.
- > Do not wipe the device with solutions such as alcohol, thinner or benzene.
- The device is restricted to indoor use when operated in 5150MHz~5350MHz to reduce the potential for interference.
- This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user' s authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a

Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.

- Increase the separation between the equipment and receiver.

-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

-Consult the dealer or an experienced radio/TV technician for help

- This device and its antenna(s) must not be co-located or operating in conjunction with any other antenna or transmitter.

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device has also been tested against this SAR limit. This device was tested for typical body-worn operations with the back of the handset kept 10mm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 10mm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

1.3 Maintenance Precautions

This product is waterproof and dustproof, but operation in extremely high temperature, extremely low temperature or wet environment should still be avoided. Please refer to the temperature and humidity standards in product

specifications.

- It may damage the screen by pressing it fiercely. Do not tap the screen with a stylus for resistive screen to avoid scratching or damaging the screen. Spray a small amount of commercial LCD screen cleaner on a soft cloth to clean the screen. Avoid spraying the cleaner directly on the screen.
- > Do not wipe the LCD screen with any chemical cleaner.
- Keep the scanning window clean without stains, and do not scratch it with sharp objects.
- If this product will not be put into use for a long period, be sure to download the data to a computer for storage.
- It takes a long time for the battery of the device to be fully charged when it is used for the first time or after storage.
- If there's any failure, please record the information about the situation and contact the maintenance personnel.

9 F9	Number 9	Number 9 function key, F9 key in Fn mode, "WXYZ" key in Aa mode		
(0*)	Number 0	Number 0 function key, "Space" key in Fn mode		
The Home, Menu, and Back keys are screen printed, without button lights Screenshot shortcut: Hold the "Power" + "Volume –" key simultaneously				

Chapter IV Quick Use

4.1 Use for the First Time

Press and hold the Power key for 3S to boot the device. When the system is working, press the Power key, and the device will enter the sleep state; in the sleep state, press the Power key, the system will wake up and light up the screen.

4.2 Boot

You can boot the machine by pressing the Power key. In deep sleep mode, press the Power key to wake up the system. If the device is powered by battery, be sure that the battery is in reliable contact.

4.3 Shutdown

When the device is turned on, in the non-sleep state, press and hold the Power key for 2s to open the Option menu, select Shutdown, and press "Confirm" to shut down normally.

4.4 Restart

When the device is turned on, in the non-sleep state, press and hold the Power key for 2s to open the Option menu, select "Restart", and press "Confirm" to restart normally.

4.5 Install SIM Card

- > Please follow the instructions below to install the SIM card:
 - Place the SIM card in the card tray as shown in Figure 4.1.

> Insert the card tray according to the direction as shown in Figure 4.2.

Figure 4-1 Place the SIM Card in Card Tray

Figure 4-2 Insert the SIM Card

4.6 Install SD Card

- > Please follow the instructions below to install the SD card:
 - > Insert the SD card into the SD card slot according the direction as shown in

Figure 4.3.

> It supports SD card with a maximum memory capacity of 128GB

8

Seuic东集

Figure 4-3 Place the SD Card in Card Slot

Notes: 1. Only NANO card is supported by this device.

Chapter V About Charging

Since the battery has only a small amount of power for testing purpose at the factory, be sure to charge it after receiving the device.

5.1 Charging Time

Battery: It takes about 2 hours to charge the battery for the first time through the adapter. The LED indicator keeps on in red when charging, and the LED indicator keeps on in green when the battery is fully charged.

5.2 Charging Temperature

- ▶ The optimal operating temperature is room temperature 18°C ~ 25°C.
- The battery is not charged if the ambient temperature is below 0°C or above 55°C.

5.3 Power Supply by Battery

- If the wireless network service or data collection program is enabled, the battery power will be greatly consumed. When these functions are not in use, be sure to turn off the power of these programs to save power.
- Note: If the product will not be put into use for a long period, please charge the whole device at least once every two months.

9

Figure 5-1 Place the Battery

5.4 Precautions on Using Battery

- If the battery is depleted, it may not immediately boot the device when the charger is first plugged in, which is normal. Please continue to charge for a period of time before booting the device.
- The battery can be charged repeatedly, but the battery is a consumable item. If the standby time of the device is greatly reduced, please replace the battery.
- Battery charging time varies with temperature conditions and battery usage, please charge it within a reasonable temperature range.
- When the battery power is low, the device will pop up the prompt of low battery.
 When the battery power is too low, the device will automatically shut down.

5.5 LED Indicator

The LED indicator in the middle on the upper right corner of the device indicates the battery power status and charging status of the device with different colors:

♦ When the USB, charging adapter, or charging connector is not plugged in, the indicator flashes in red to indicate that the battery power is too low, please charge in time;

 \diamond When the USB, charging adapter, or charging connector is plugged in, the indicator keeps on in red to indicate that the battery is charging;

♦ When the USB, charging adapter, or charging connector is plugged in, the indicator keeps on in green to indicate that the battery is fully charged.

- The LED indicator in the middle on the upper right corner of the device flashes in blue (in the form of breathing light), indicating that there is unread message, please check it in time.
- The LED indicator in the left on the upper right corner of the device flashes in red once when the barcode is scanned; the indicator does not turn on when the barcode is not scanned.

Remark: When the device is charging, the blue indicator will not prompt.

Chapter VI Home Screen

Find this icon Settings - App and Notifications - Default App, press the home screen App to set the home screen, the new AUTOID 10 has two home screens by default, which can be set freely.

Chapter VII Settings

7.1 WLAN

Find this icon: -> Settings -> Network and Internet ->WLAN

Wi-Fi 2.4G provides a wireless network access range of up to 450 feet (150m), and 5G provides a wireless network access range of up to 300 feet (100m) (Note, industrial grade AP, open area). To use Wi-Fi on your device, it must be connected to a wireless access point or [Hotspot].

Note: The availability and coverage of Wi-Fi signal depends on quantity, infrastructure, and other objects the signal penetrates.

Enable Wi-Fi and connect to a wireless network

1. Tap the WLAN Disable/Enable button to enable Wi-Fi, and the device will automatically scan for available WLAN networks.

2. The Wi-Fi network list will display the SSIDs and security settings (open or encrypted network) of the Wi-Fi network found.

3. Tap one of the SSIDs to connect. When an open network is selected, the device will automatically connect to that network. If an encrypted network is selected, you must enter the correct password before tapping Connect.

4. WALN frequency band settings (at the bottom of WLAN, tap WLAN Preferences - Advanced - WLAN advanced settings - WLAN frequency band settings).

If "only 5GHz/2.4GHz frequency band" is selected, only APs in 5GHz/2.4GHz frequency band can be searched.

Figure 7-2 WLAN Frequency Band

- In the Wi-Fi enabled interface, tap Scan. The SSIDs found will be displayed in the Wi-Fi network list.
- > Tap another SSID to connect to the network

7.2 Bluetooth

Find this icon:

-> Settings

- -> Connected devices
- -> Connection Preferences
- -> Bluetooth

1. Press the Bluetooth Disable/Enable button, press Pair with New Device, enable and search for other Bluetooth devices;

2. In the list of devices found, press the device to be connected for pairing;

3. After entering the PIN code in the pop-up pairing request dialog box, press "Confirm" to connect the device;

Figure 7-3 Bluetooth Menu

4. For device successfully paired, press the Setting button on the right to

Figure 7-11 Modify WLAN Hotspot

This interface can be modified by pressing the place that needs to be modified.

7.4.4 VPN

After enabling VPN, you need to add a VPN private network by yourself (for example, if you want to access the company's internal file server and other network shared resources), you can connect to the company's VPN server through the VPN client no matter where you are. After obtaining the VPN account, you can dial-up through the VPN client. After the dial-up is successful, you can access the company's shared resources.

Figure 7-12 VPN Settings

7.4.5 Mobile Network

1. Enabled: After entering the roaming environment, the data communication can be directly switched to the roaming state.

Figure 7-13 Mobile Data Network Roaming

2. Preferred network type: After selecting the corresponding network type priority, the task bar will display the corresponding network signal indication G=2G priority 3G=3G priority 4G=4G priority, For example: select the network type 2G priority for China Unicom card, the device will forcedly downgrade to 2G network in the area with 3G signal. New AUTOID 10 is dual-card dual-standby, and the primary and secondary cards can be switched through the data preference settings.

Figure 7-14 Network Mode Selection

3. For the name of the access point, generally, the default is cmnet for China Mobile, 3gnet for China Unicom, and ctnet for China Telecom, as shown in the figure:

Figure 7-15 Access Point APN

4. Add a dedicated APN, press this the button, the interface shown in the figure below will pop up, generally add a name (custom), APN (network access point), user name, password, etc., press the Menu key to select Save to add, and press the Menu key to select Abandon or press the Back key to return directly and do not save. To modify or delete the added APN, press "Confirm" to modify it, and press the Menu key to save or delete it.

Note: When adding APN, users can set other options according to own access point demand.

5. Network carrier: Search the network carrier resources of the current environment.

7.4.6 Reset Network Settings

This function will reset some settings of the Wi-Fi, mobile data network and Bluetooth of the device. Press the [Reset Settings] key to jump to the confirmation interface for resetting the network settings, press [Reset Settings], the system prompts that reset is successful, as shown in the figure below:

Figure 7-16 Reset Network Settings

Note: 1. Connect the device to Wi-Fi. After resetting the network settings, the device will clear the AP password and cut off the connection.

2. Disable the enhanced 4G LTE mode in the mobile data network. After resetting the network, the device will enable the enhanced 4G LTE mode function by default.

3. The default name of Bluetooth is modified and paired. After resetting the network, the Bluetooth name of the device is restored, and the Bluetooth pairing is disconnected.

Figure 8-3 Basic Settings

4. Open [Application Settings] to set the basic scan switch, as shown in Figure

8-4:

- (1) Scanning sound: When enabled, there will be a sound prompt when scanning;
- (2) Vibration: When enabled, the device will vibrate when scanning;
- (3) Bar code addition: Enable it to output bar code continuously;

(4) Automatic clear: After scanning the barcode, the previous barcode will be automatically cleared;

(5) Self-starting at boot: When enabled, the scanning program will be automatically started when the device is booted;

(6) Display barcode type: When enabled, the barcode type will be displayed when scanning the barcode;

(7) Release to stop scanning: When enabled, the scanning light will turn off immediately when release the scanning key; when disabled, the scanning light will turn off after [scanning duration] when release the scanning key;

(8) Cyclic scan: When enabled, the device will scan automatically and continuously;

(9) Interval time: Set the time by yourself, the interval time from completing scanning the current barcode to starting scanning the next barcode;

(10) Restore barcode default settings: You can restore barcode default settings, as shown in Figure 8-5;

(11) Barcode suffix: You can add barcode output suffix by yourself (it can be numbers, letters, special characters, etc.);

(12) Barcode prefix: You can add barcode output prefix by yourself (it can be numbers, letters, special characters, etc.);

(13) End character: You can choose the end character of the barcode, including:Enter, Tab, Space, None;

(14) Barcode sending method: You can choose to send by focus input, broadcast, simulated keyboard or clipboard (for simulated keyboard, select an input method that supports hard keyboard), as shown in Figure 8-6;

(15) Developer item: Enter the password 888888 to modify the developer item (it is not recommended to modify it without authorization), as shown in Figure 8-7.

5. Program hides or exits

(1) Select [Hide], the program will run in the background, and you can scan by pressing the Scan key in any editing interface;

(2) Select [Exit], the program will exit and close.

Figure 8-7 Hide and Exit

8.2 System Upgrade

This application is convenient for customer to achieve remote upgrade.

1. Find this icon **seems**, enter [System Upgrade], as shown in the figure below:

Figure 8-8 System Upgrade

2. When the network is smooth, press the Check for Updates key, if there is no update, it will prompt that the current version is the latest version; if there is an update, it will prompt that new version is available, press to enter the Download interface, as shown in the figure.

Figure 8-9 Check for Update and Download

3. Press Download, after successfully downloading, press Update Now, the device will automatically restart and enter the upgrade state, as shown in the figure:

Figure 8-10 Update Now

When the power is lower than 30%, the following prompt will appear and the upgrade cannot be performed.

Figure 8-11 Low Battery Handling

4. System upgrade settings, as shown in the figure:

Figure 8-12 System Upgrade

System upgrade instructions

It may cause security risks such as the terminal being unavailable or revealing your personal information to upgrade the firmware and system of the terminal with unauthorized third-party software. It is recommended to upgrade online or download the software that matches the terminal in our official website. After the terminal is upgraded, all your personal information may be removed, please back up your personal information before upgrading.

8.3 Mobile Butler

In order to achieve this function of the product, customers need to set the permission of Android handheld terminal, and users are not allowed to use non-designated applications.

Find this icon is , Settings - Apps and Notifications - Default Apps, press the home screen App to set the home screen, Home Screen Apps -> select Mobile Butler, press the Home key to exit it and enter the Mobile Butler launcher interface

Figure 8-13 Default Launcher

2. Set administrator and modify password

(1) In the Mobile Butler interface, press the three dots (Menu) key in the lower

right corner to add the desktop item.

Figure 8-14 Interface Without Password

The above figure shows that the administrator password has not been set, you

need to set it first, press the [Confirm] key to jump to the password modification interface, as shown in the figure below:

Figure 8-15 Set Initial Password

Set the administrator initial password as required, for example: 123456, press the Enter button, the password is set successfully. Note: Password shall not be empty and the contents of the update password field and confirm password field must be consistent.

(2) Press the three dots (Menu) key in the lower right corner again, as shown in the figure below:

Figure 8-16 Password Input Interface

Enter the corresponding administrator password (123456). You can pass the

verification, and the following figure will appear:

Figure 8-17 App Adding Interface

Select the App added to the [Desktop], press [Confirm] to complete the operation; select an App [Auto Start], the App will be automatically started when the device restarts (Note: Only one App is supported currently), as shown in the figure below:

Figure 8-18 Main Interface

(3) Modify administrator password

Add App interface, press [Settings] in the upper right corner to enter the Setting interface, press [Modify Password] to display the password modification screen:

Figure 8-19 Modify Password

(4) Modify administrator name

Enter [Settings] and press [Mobile Butler] to modify the name of "Mobile Butler".

Figure 8-20 Modify Name

(5) Change wallpaper

Enter the [Settings] interface, press [Change Wallpaper], the following picture

figure will appear:

Figure 8-21 Change Wallpaper

(6) Remove the default launcher settings

Method 1: Enter [Settings]----> [Apps]----> select [Reset App Preferences], press

[Reset Apps] to release.

Figure 8-22 Release the Default Launcher Setting 1

Method 2: In the Mobile Butler Setting interface, change the [Mobile Butler starts automatically after booting] to [Mobile Butler does not start automatically after booting], as shown in the figure below:

Figure 8-23 Release the Default Launcher Setting 2

Note: Method 2 is recommended. Method 1 will reset other App settings as well.
8.4 Quick Configuration

In this App, the configuration information of one device can be quickly copied to another device of the same model, so that the related configurations of the two devices are exactly the same.

Configuration import operations cannot be implemented between devices of different models.

Find this icon Find the Quick Configuration interface;

8.4.1 Import

1. Import file

Put the qualified configuration zip package in the specified directory of the

external SD card to achieve this function. The system path of the external SD card is: external SD card/SysSetting/Setinfo.tar.gz.

(1) Manual import:

1) Put the configuration zip package (file name is Setinfo.tar.gz) in the external SD card/SysSetting directory, as shown in the figure:

=	8	0 & Systeming	. ai
5		n Parant lititar Seferfo kar ga Notice sin bist pre-in	52 MB

Figure 8-25 Directory of Configuration Zip Package

2) Enter Quick Configuration, press [Import File], the following prompt will

pop up, press [Confirm];

Figure 8-26 Import File

3) After importing successfully, the item and state of the file imported will pop up. Press "Confirm", the system prompts to restart the device. Press [Restart Now] to complete (some configurations will not take effect immediately if the device is not restarted).

Import File		Impo	rt File

Confirm		Conf	irm
		100	

Figure 8-27 File Configuration is Imported Successfully

2. Import QR code

This function can import external configuration files by scanning QR code, and

you can call camera to scan other external QR codes to import the configuration files.

(1) In Quick Configuration, press [Import QR Code], and place the QR code to be imported into the scanning box, as shown in the figure below:

Figure 8-28 Import QR Code Window

(2) After successful scanning and transmission, the item and state imported by the QR code will pop up. Press "Confirm", the system prompts to restart the device. Press [Restart Now] to complete (some configurations will not take effect immediately if the device is not restarted).

Figure 8-29 QR Code Imported Successfully

8.4.2 Export

1. Export file

This function can export all the configuration items of the device in the configuration import and export tool, and export to the directory specified by the built-in SD card or external SD card of the device. The name of the file to be exported is Setinfo.tar.gz. The path of the file to be exported is: a) External SD card/SysSetting/

b) Built-in SD card

When the device has an external SD card, the file exported is preferentially saved in the external SD card.

(1) In Quick Configuration, press [Export File], and the following interface will pop up to indicate that the file is exported successfully. When there is a configuration file in the external SD card, the system will give a prompt, and the original file will be overwritten:

Once Configure		Once 0	Once Configure		ile 👘

		1			

Figure 8-30 Export File

(2) The name of the file to be exported is Setinfo.tar.gz, view in [File

Management]---->[Phone Memory] OR [External Memory Card]---->[SysSetting]:

Figure 8-31 File Export Path

2. Export QR Code

The QR code is exported to generate a QR code, and the configuration file is transmitted by scanning the QR code to connect to the Bluetooth channel.

(1) In Quick Configuration, press [Export QR Code], the following interface will pop up, indicating that the QR code is exported successfully, then press "Confirm":

Figure 8-32 Export QR Code

(2) The generated QR code picture is below the App, press the small QR code

icon to view it.

Figure 8-33 QR Code Picture

8.5 Characteristic Settings

This App is used to quickly realize the special demands of customers, which is convenient for customers to use quickly.

Figure 8-34 Characteristic Settings

8.5.1 Touch Screen Glove Mode

When this function is enabled, it supports the operation of the touch screen with gloves, and the sensitivity of the touch screen is high at this time;

8.5.2 Disable State Pulldown

When this function is enabled

The function takes effect immediately, and the menu cannot be pulled down.

When this function is disabled

This function takes effect immediately, the menu can be pulled down normally.

8.5.3 Prohibit Transmitting the Key Value of the Scan Key to the App

When this function is enabled

Some App such as Telnet programs will transmit all key values pressed to the server

When this function is disabled

In some cases, prohibit App such as Telnet programs to transmit all key values pressed to the server

8.5.4 Display the Scan Floating Key

When this function is disabled

The scan floating key is not displayed at the bottom of the interface

When this function is enabled

The scan floating key is suspended at the bottom of any interface of the device, after pressing it, the scanning head may emit light and scan the barcode normally

8.5.5 Prohibit Drop Detection

When this function is disabled

If the device is accidentally dropped, the system will automatically detect, turn off the screen and enter sleep state

When this function is enabled

If the device is accidentally dropped, the system will not turn off the screen and sleep

8.6 Digital Certificate Whitelist

This software is used to add the specified digital certificate to the whitelist, App which is signed with the digital certificate in the whitelist can be directly installed when the system item "Unknown Source" is not opened. The default password of App is: 4007770876.

Figure 8-35 Digital Certificate Whitelist

1. Import the certificate in the APK file

The App will search all APK files in the internal storage device directory and display their file names and directories. Users can import the certificate in the selected APK file into the system by pressing the [Import] key after checking one or more display items.

Ø	com android chrome, 307109.	Ĩ.
	(Second	

Figure 8-36 APK File Import List

2. Import the certificate from the installed package

The App will display the name of the third-party APP installed in the system and its package name. Users can import the certificate in the selected APK file into the

system by pressing the [Import] key after checking one or more display items.

Package Installed List	
Total Control	
Import.	

Figure 8-37 List of Name of Installed Package

3. Remove the certificate from the whitelist

The App will display the name of the added certificate. After selecting one or more display items, press [Remove] to delete the corresponding certificate from the system whitelist. Display items that are grayed out and have no check box are the system default certificates and cannot be deleted.

Whitelist	
sistemp	
sealoplations	
com.ticktick.task	13
Remove	- P

Figure 8-38 Signed Whitelist Category

Cautions:

The added certificate will be named with the package name of the App.

For certificates with the same content but different package names, only one record is saved, and it is named with the name when the first record was saved.

Chapter IX Troubleshooting

Problem	Reason	Solution		
After pressing the Power key, the new AUTOID 10 does not boot	The battery is low or not charged	Charge or replace the battery		
	Press	Press and hold for 3S		
	The battery is incorrectly installed	Install the battery correctly		
	System crash	Perform soft reset		
	Battery failure	Replace the battery		
The rechargeable battery is unable to be charged	Battery temperature is too high/low	Keep the battery in a normal temperature environment		
No sound	Volume is set too low or turned off	Adjust the volume		
The new AUTOID 10 shuts down automatically	The new AUTOID 10 keeps at inactive state	After a period of inactivity, the mobile data terminal will shut down. This time period can be set to 15S-30Min, or never sleep.		
	Battery is exhausted	Charge or replace the battery		
	The scanning tool program is not opened	Load the scan App in nev AUTOID 10		
New AUTOID 10 does not decode when reading barcode	Keep in the Barcode Setting or App Setting interface	Set the scanner program to the scanning interface, or hide the scanner program		
	Barcode is not readable	Ensure the barcode is free of defect		
	Barcode decoding function is not enabled	EnablecorrespondingdecodingfunctionBarcode Setting		
	The new AUTOID 10 does not support decoding this type of barcode			
	The distance between new AUTOID 10 and the barcode is not suitable.	Put the new AUTOID 10 in the correct scan range.
