

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On the left, a white test bench holds a spectrum analyzer. A power cord runs from a wall outlet to a power supply unit on the floor. A wooden table on the right has a device being tested, with a power cord and a small electronic component connected to it. The floor is a light-colored, slightly reflective surface.
Radiation Emission Test Setup (Below 30MHz)	 A photograph of a radiation emission test setup. A black metal frame stands in the center, supporting a white, rectangular test object. The room's walls are covered with white, cross-shaped electromagnetic shielding panels. The floor is marked with yellow and blue caution tape. A small black monitor is visible on the right side of the frame.

Radiation Emission Test Setup (30MHz to1GHz)	A photograph of a radiation emission test setup for the 30MHz to 1GHz frequency range. The setup is located inside an anechoic chamber with white walls and floor. A white, rectangular test fixture is positioned on a black, oval-shaped mat. The mat is surrounded by a yellow and black striped safety line. The floor is marked with blue and white diagonal stripes. A metal frame structure is visible on the right side of the chamber.
Radiation Emission Test Setup (1GHz to18GHz)	A photograph of a radiation emission test setup for the 1GHz to 18GHz frequency range. The setup is located inside an anechoic chamber with white walls and floor. A white, rectangular test fixture is positioned on a black, oval-shaped mat. The mat is surrounded by a yellow and black striped safety line. The floor is marked with blue and white diagonal stripes. A metal frame structure is visible on the right side of the chamber. A black, pointed object is visible in the foreground.
