# **TEST REPORT**

| Application No.:            | KSCR2412002466AT  |
|-----------------------------|---|
| FCC ID:                     | 2ANHJGDR24  |
| Applicant:                  | Shanghai shengzhen commercial & trade Ltd company             |
| Address of Applicant:       | Xinlong road No.1373 Room 606 Minhang District Shanghai China |
| Manufacturer:               | Shanghai shengzhen commercial & trade Ltd company             |
| Address of Manufacturer:    | Xinlong road No.1373 Room 606 Minhang District Shanghai China |
| Equipment Under Test (EUT): |   |
| EUT Name:                   | Remote Control  |
| Model No.:                  | GD-R24  |
| Standard(s) :               | 47 CFR Part 15, Subpart C 15.231                              |
| Date of Receipt:            | 2024-12-04  |
| Date of Test:               | 2024-12-13 to 2025-01-03                                      |
| Date of Issue:              | 2025-01-06  |
| Test Result:                | Pass*   |

\* In the configuration tested, the EUT complied with the standards specified above.

## **4** General Information

## 4.1 Details of E.U.T.

| Power supply:        | DC 3V by Battery     |
|----------------------|----------------------|
| Test voltage:        | DC 3V                |
| Operation Frequency: | FL:315MHz, FH:390MHz |
| Channel Numbers:     | 2                    |
| Modulation Type:     | FSK                  |
| Antenna Type:        | Internal antenna     |
| Transmitter type:    | Manually             |

## 4.2 Description of Support Units

| Description                                     | Manufacturer | Model No. | Serial No. |
|---|--------------|-----------|------------|
| The EUT has been tested as an independent unit. |              |           |            |

## 4.3 Measurement Uncertainty

| No.  | Item                            | Measurement Uncertainty |  |
|--|---------------------------------|-------------------------|--|
| 1  | Radio Frequency                 | 8.4 x 10 <sup>-8</sup>  |  |
| 2  | Timeout                         | 2s                      |  |
| 3  | Duty Cycle                      | 0.37%                   |  |
| 4  | Occupied Bandwidth              | 3%                      |  |
| 5  | RF Conducted Power              | 0.6dB                   |  |
| 6  | RF Power Density                | 2.9dB                   |  |
| 7  | Conducted Spurious Emissions    | 0.75dB                  |  |
| 8  | PE Padiated Power               | 5.2dB (Below 1GHz)      |  |
| 0  | RF Radiated Power               | 5.9dB (Above 1GHz)      |  |
|  |                                 | 4.2dB (Below 30MHz)     |  |
| 9  | Radiated Spurious Emission Test | 4.5dB (30MHz-1GHz)      |  |
| 9  |                                 | 5.1dB (1GHz-18GHz)      |  |
|  |                                 | 5.4dB (Above 18GHz)     |  |
| 10   | Temperature Test                | 1°C                     |  |
| 11   | Humidity Test                   | 3%                      |  |
| 12   | Supply Voltages 1.5%            |                         |  |
| 13   | Time                            | 3%                      |  |
| Note: The measurement uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2. |                                 |                         |  |

Report No.: KSCR241200246601 Page: 6 of 26

## 4.4 Test Location

All tests were performed at:

Compliance Certification Services (Kunshan) Inc.

No.10 Weiye Rd, Innovation park, Eco&Tec, Development Zone, Kunshan City, Jiangsu, China. Tel: +86 512 5735 5888 Fax: +86 512 5737 0818

No tests were sub-contracted.

Note:

1. SGS is not responsible for wrong test results due to incorrect information (e.g., max. internal working frequency, antenna gain, cable loss, etc) is provided by the applicant. (If applicable).

2. SGS is not responsible for the authenticity, integrity and the validity of the conclusion based on results of the data provided by applicant. (If applicable).

3. Sample source: sent by customer.

## 4.5 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### • A2LA

Compliance Certification Services (Kunshan) Inc. is accredited by the American Association for Laboratory Accreditation (A2LA). Certificate No. 2541.01.

#### • FCC

Compliance Certification Services (Kunshan) Inc. has been recognized as an accredited testing laboratory. Designation Number: CN1172.

#### • ISED

Compliance Certification Services (Kunshan) Inc. has been recognized by Innovation, Science and Economic Development Canada (ISED) as an accredited testing laboratory. Company Number: 2324E

#### • VCCI

The 3m and 10m Semi-anechoic chamber and Shielded Room of Compliance Certification Services (Kunshan) Inc. has been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: R-20134, R-11600, C-11707, T-11499, G-10216 respectively.

# 4.6 Deviation from Standards

## 4.7 Abnormalities from Standard Conditions

None

Report No.: KSCR241200246601 Page: 7 of 26

# 6 Radio Spectrum Technical Requirement

#### 6.1 Antenna Requirement

#### 6.1.1 Test Requirement:

47 CFR Part 15, Subpart C 15.203

#### 6.1.2 Conclusion

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### EUT Antenna:

The antenna is Internal antenna and no consideration of replacement. The best case gain of the antenna is 0dBi.

Antenna location: Refer to Internal photos

Report No.: KSCR241200246601 Page: 9 of 26

# 7 Radio Spectrum Matter Test Results

## 7.1 20dB Bandwidth

| Test Requirement      | 47 CFR Part 15, Subpart C 15.231(c) |
|-----------------------|-------------------------------------|
| Test Method:          | ANSI C63.10 (2013) Section 6.9      |
| Measurement Distance: | 3m                                  |

Limit:

| Frequency range(MHz) | Limit                                       |
|----------------------|---|
| 70-900               | No wider than 0.25% of the center frequency |
| Above 900            | No wider than 0.5% of the center frequency  |

#### 7.1.1 E.U.T. Operation

Operating Environment: Temperature: 21.6 °C

Humidity: 48.2 % RH Atmospheric Pressure: 1010 mbar

#### 7.1.2 Test Mode Description

| Pre-scan /<br>Final test | Mode<br>Code | Description                               |
|--------------------------|--------------|---|
| Final test               | 00           | TX mode_Keep the EUT in transmitting mode |

#### 7.1.3 Test Setup Diagram

#### 7.1.4 Measurement Procedure and Data

Please Refer to Appendix for Details

Report No.: KSCR241200246601 Page: 10 of 26

## 7.2 Dwell Time (15.231(a1))

Test Requirement47 CFR Part 15, Subpart C 15.231(e)Test Method:ANSI C63.10 (2013) Section 7.8.4Measurement Distance:3m

#### 7.2.1 E.U.T. Operation

## 7.3 Radiated Emissions below 1GHz

Test Requirement47 CFR Part 15C Section 15.231(b) and 15.209Test Method:ANSI C63.10 (2013) Section 6.4&6.5Measurement Distance:3m

Limit:

| Frequency(MHz) | Field<br>strength(microvolts/meter) | Measurement<br>distance(meters) |
|----------------|-------------------------------------|---------------------------------|
| 0.009-0.490    | 2400/F(kHz)                         | 300                             |
| 0.490-1.705    | 24000/F(kHz)                        | 30                              |
| 1.705-30.0     | 30                                  | 30                              |
| 30-88          | 100                                 | 3                               |
| 88-216         | 150                                 | 3                               |
| 216-960        | 200                                 | 3                               |
| Above 960      | 500                                 | 3                               |

Remark: The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90kHz, 110-490kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.

#### 7.3.1 E.U.T. Operation

#### Report No.: KSCR241200246601 Page: 12 of 26

#### 7.3.3 Test Setup Diagram

Below 30MHz

30MHz-1GHz

#### 7.3.4 Measurement Procedure and Data

a. For below 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 or 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.

b. The EUT was set 3 or 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.

c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.

e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, guasi-peak or average method as specified and then reported in a data sheet.

g. The radiation measurements are performed in X, Y, Z axis positioning. And found the X axis positioning which it is worse case, only the test worst case mode is recorded in the report.

Remark:

1) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows: Final Test Level =Receiver Reading + Antenna Factor + Cable Factor - Preamplifier Factor

2) Scan from 9kHz to 1GHz, the disturbance below 30MHz was very low. The points marked on above plots are the highest emissions could be found when testing, so only above points had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported.

Please Refer to Appendix for Details

#### 7.4.4 Measurement Procedure and Data

a. For below 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 or 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.

b. For above 1GHz, the EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter fully-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.

c. The EUT was set 3 or 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.

d. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

e. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.

f. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

g. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

h. The radiation measurements are performed in X, Y, Z axis positioning. And found the X axis positioning which it is worse case, only the test worst case mode is recorded in the report.

Remark: Level= Read Level+ Cable Loss+ Antenna Factor- Preamp Factor

\*\* linear interpolations

[Where F is the frequency in MHz, the formulas for calculating the maximum permitted fundamental field strengths are as follows:

for the band 130-174 MHz, uV/m at 3 meters = 56.81818(F) - 6136.3636;

for the band 260-470 MHz, uV/m at 3 meters = 41.6667(F) - 7083.3333.

The maximum permitted unwanted emission level is 20 dB below the maximum permitted fundamental level.]

The fundamental frequency of the EUT is 315.00 MHz and 390.00MHz.

The limit for average or QP field strength dBuv/m for the fundamental emission= 75.62

Report No.: KSCR241200246601 Page: 16 of 26

 $dB\mu V/m(315MHz)$  and  $79.24dB\mu V/m(315MHz)$ .

No fundamental is allowed in the restricted bands.

The limit for average field strength dBuv/m for the spurious emission=55.62 dBuV/m(315MHz) and 59.24dB $\mu$ V/m(315MHz). Spurious in the restricted bands must be less than 55.62 dBuV/m(315MHz) and 59.24dB $\mu$ V/m(315MHz) or 15.209, whichever limit permits a higher field strength.

#### 7.5.1 E.U.T. Operation

Operating Environment:

Temperature: 21.6 °C Humidity: 48.2 % RH Atmospheric Pressure: 1010 mbar
