RE: FCC ID: CNTWM3B2200BG_ATCB001433
Attention: Kyle Fujimoto

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that this device is the WLAN portion of the system. Please note that you have provided the Bluetooth test report. Please provide the test report for the WLAN and the new antenna.
2. Please note that the maximum conducted power listed in the SAR report for this PC2 is 16dBm (39.8mW) for the 802.11b and 13dBm (20mW) for the 802.11g. Please note that the power listed on the grant for this device is 17.48dBm (56mW). The conducted power listed in the original SAR reports are 17.4dBm (56mW) for the 802.11b and 16.5dBm (44.7mW) for the 802.11g. Please also note that the conducted power listed in the original SAR reports are within 5% of the listed 56mW on the original grant. The FCC has stated that conducted power of a device cannot exceed a 0.5dB change without a new FCC ID. It now appears that the conducted power delivered to the antenna for this device has change far in excess of that allowed by the FCC. Please retest SAR using a conducted power within 5% of the conducted power listed for the 802.11b and 802.11g device. Alternately, please resubmit the device for a new FCC ID including all of the appropriate exhibits for an original filing.
