2.7 PEAK EXCURSION RATIO

2.7.1 Specification Reference

Part 15 Subpart E §15.407(a)(6)

2.7.2 Standard Applicable

The ratio of the peak excursion of the modulation envelope (measured using a peak hold function) to the maximum conducted output power shall not exceed 13 dB across any 1 MHz bandwidth or the emission bandwidth whichever is less.

2.7.3 Equipment Under Test and Modification State

Serial No: SS220414800525 / Test Configuration A

2.7.4 Date of Test/Initial of test personnel who performed the test

July 03, 2014 / AC

2.7.5 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.7.6 Environmental Conditions / Test Location

Test performed at TÜV SÜD America Inc. Rancho Bernardo facility

Ambient Temperature	25.8°C
Relative Humidity	47.3%
ATM Pressure	98.7 kPa

2.7.7 Additional Observations

- This is a conducted test as per Section G of 789033 D01 General UNII Test Procedures v01r04 (Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices Part 15, Subpart E (June 06, 2014)).
- The ratio of the peak-max-hold spectrum was verified not to exceed 13 dB.
- Conducted antenna port 0 and 1 were verified and found transmit port 1 was worst case scenario when in SISO mode. Therefore, only transmit port 1 was reported.
- The offset table below to the power meter was used for the power splitter, external attenuator and cable used.

Channel (#)	Frequency (MHz)	Offset (dB)
