The test results in the report only apply to the tested sample. The test report shall be invalid without all the signatures of preparer, reviewer and approver. Any objections must be raised to CSIC within 15 days since the date when the report is received. It will not be taken into consideration beyond this limit.

# 1. TEST SUMMARY

# **1.1. TEST DESCRIPTION**

Test procedures according to the technical standards:

| Item  | Clause                                       | Result | Note |
|---|--|--------|------|
| Conducted Emission on AC Mains                                | Part 15.207(a)<br>RSS-Gen 8.8                | PASS   |      |
| Maximum Conducted Output Power                                | Part 15.247(b)(3)<br>RSS-247 5.4(d)          | PASS   |      |
| Radiated Spurious Emission                                    | Part 15.247(c)<br>Part 15.205<br>RSS-247 3.3 | PASS   |      |
| Conducted Spurious Emissions Measured in 100 kHz<br>Bandwidth | Part 15.247(d)<br>RSS-247 5.5                | PASS   |      |
| Carrier Frequency Separation                                  | Part 15.247(a)(1)<br>RSS-247 5.1(b)          | PASS   |      |
| Number of Hopping Frequency                                   | Part 15.247(a)(1)(iii)<br>RSS-247 5.1(d)     | PASS   |      |
| Time of Occupancy   | Part 15.247(a)(1)(iii)<br>RSS-247 5.1(d)     | PASS   |      |
| 20dB Bandwidth  | Part 15.247(a)(1)<br>RSS-247 5.1             | PASS   |      |
| 99% Bandwidth   | RSS-Gen 6.7                                  | PASS   |      |
| Antenna Requirement   | Part 15.247(b)(4)<br>Part 15.203             | PASS   |      |

Note:

1) "N/A" denotes test is not applicable in this Test Report.

- 2) All tests are according to ANSI C63.10-2013.
- 3) The statements of test result on the above are decided by the request of test standard only; the measurement uncertainties are not factored into this compliance determination.
- 4) The information of measurement uncertainty is available upon the customer's request.

# **1.2. TEST FACILITY**

Shenzhen Central Standard International Center Co., Ltd. (CSIC)

Room 201, Building 1, Mogen Fashion Industrial Park, No. 10, Shilongzai Road, Xinshi Community, Dalang Street, Longhua District, Shenzhen.

The test facility is recognized, certified or accredited by the following organizatios:

CNAS Registration No.: L11671

FCC Registration No.: 0031378433 Designation Number: CN1317

IC CAB identifier: CN0051

A2LA Lab Cert. No.: 6426.01

## **1.3. MEASUREMENT UNCERTAINTY**

The estimated combined standard uncertainty for radiated emissions and conducted emissions measurements as below table.

Below is the best measurement capability for Shenzhen Central Standard International Center Co., Ltd.

| Test Items                         | Measurement Uncertainty | Notes |
|------------------------------------|-------------------------|-------|
| RF output power, conducted         | ±1.04dB                 | (1)   |
| Unwanted Emissions, conducted      | ±1.38dB                 | (1)   |
| All emissions, radiated 9KHz-30MHz | ±4.44dB                 | (1)   |
| All emissions, radiated 30-1GHz    | ±4.56dB                 | (1)   |
| All emissions, radiated 1G-6GHz    | ±4.84dB                 | (1)   |
| All emissions, radiated>6G         | ±4.84dB                 | (1)   |
| Conducted Emission (9KHz-150KHz)   | ±3.22dB                 | (1)   |
| Conducted Emission (150KHz-30MHz)  | ±3.24dB                 | (1)   |

**Note(1):** This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

# 2.1. GENERAL DESCRIPTION OF EUT

| EUT(Product Specifications) |   |  |  |
|-----------------------------|---|--|--|
| Product Name:               | Wireless Subwoofer  |  |  |
| Model:                      | Q65K-SW   |  |  |
| Series Model(s):            | Q65K-SW, Q60K-SW, Q6BK-SW, Q65K5-SW, Q6*****-SW, R40C-SW,<br>R45C-SW, R48C-SW, R40D-SW, R45D-SW, R48D-SW, R4***-<br>SW,Q65H-SW,Q60H-SW,Q68H-SW,Q69H-SW,Q6*****-SW (*can be any<br>numerica number"0~9" or alphebtical number "A~Z") |  |  |
| Power supply:               | AC 100-240V~50/60Hz   |  |  |
| Hardware version:           | V03   |  |  |
| Software version:           | V17   |  |  |
| Technical Specification     | of Bluetooth  |  |  |
| Operating Frequency         | 2402 - 2480 MHz   |  |  |
| Type of Modulation          | GFSK, π/4DQPSK, 8DPSK   |  |  |
| Channel Number              | 79 channels   |  |  |
| Channel Separation          | 1MHz  |  |  |
| Bluetooth Version           | Bluetooth 5.3   |  |  |
| Antenna Type                | PIFA Antenna  |  |  |
| Max. Antenna Gain           | 2.50 dBi.   |  |  |

#### Note:

1. For a more detailed features description, please refer to the manufacture's specifications or the user's manual.

2. Full tests were applied to the sample C241201004-Y01/01 only in this document.

# 2.2. DESCRIPTION OF TEST MODES AND TEST FREQUENCY

The EUT has been tested under typical operating condition. The Applicant provides communication tools software to control the EUT for staying in continuous transmitting mode for testing.

Operation Frequency List for Bluetooth:

| Channel | Frequency(MHz) | Channel | Frequency(MHz) |
|---------|----------------|---------|----------------|
| 00      | 2402.00        | 20      | 2422.00        |
| 01      | 2403.00        | 21      | 2423.00        |
| 02      | 2404.00        | 22      | 2424.00        |
| 03      | 2405.00        | 23      | 2425.00        |
| 04      | 2406.00        | 24      | 2426.00        |
| 05      | 2407.00        | 25      | 2427.00        |
| 06      | 2408.00        | 26      | 2428.00        |
| 07      | 2409.00        | 27      | 2429.00        |

Note:

1) The cable loss has calculated in test result which connection between each test instruments.

# 2.4. DESCRIPTION OF THE TEST MODES

To investigate the maximum EMI emission characteristics generates from EUT, the test system was pre-scanning tested base on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned above was evaluated respectively.

| Worst Mode | Description | Data Rate |
|------------|-------------|-----------|
| Mode 1     | TX BDR CH00 | 1 Mbps    |
| Mode 2     | TX BDR CH39 | 1 Mbps    |
| Mode 3     | TX BDR CH78 | 1 Mbps    |
| Mode 4     | TX EDR CH00 | 2 Mbps    |
| Mode 5     | TX EDR CH39 | 2 Mbps    |
| Mode 6     | TX EDR CH78 | 2 Mbps    |
| Mode 7     | TX EDR CH00 | 3 Mbps    |
| Mode 8     | TX EDR CH39 | 3 Mbps    |
| Mode 9     | TX EDR CH78 | 3 Mbps    |

Note:

- 1) The measurements are performed at the high, middle, low available channels.
- 2) All the bit rate of transmitter have been tested and found the lowest rate is found to be the worst case and recorded.
- 3) This test was performed with EUT in X, Y, Z position and worst case was found when EUT in X position.
- 4) For radiated emission above 1 GHz test, 1GHz-25GHz have been pre-tested and in this report only recorded the worst case. The remaining spurious points are all below the limit value of 20dB.

For AC Conducted Emission

| Test Case             |                 |  |
|-----------------------|-----------------|--|
| AC Conducted Emission | Mode10: Working |  |

# 2.5. TEST SOFTWARE AND POWER LEVEL

During testing channel & power controlling software provided by the customer was used to control the operating channel as well as the output power level.

| RF Function | Туре | Mode Or Modulation<br>type | Ant Gain(dBi) | Power<br>Class | Software For<br>Testing  |
|-------------|------|----------------------------|---------------|----------------|--------------------------|
|             |      | GFSK                       |               | 7              |                          |

# 2.6. BLOCK DIGRAM SHOWING THE CONFIGURATION OF SYSTEM TESTED

a. Radiated Spurious Emission Test

b. Conducted Emission Test

## 2.7. DESCRIPTION OF NECESSARY ACCESSORIES AND SUPPORT UNITS

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Necessary accessories |   |  |  |  |  |  |  |
|-----------------------|---|--|--|--|--|--|--|
| Item                  | Item Equipment Mfr/Brand Model/Type No. Serial No. Note |  |  |  |  |  |  |
| N/A                   |   |  |  |  |  |  |  |

|      | Support units  |           |                |            |      |  |
|------|--|-----------|----------------|------------|------|--|
| Item | Equipment  | Mfr/Brand | Model/Type No. | Serial No. | Note |  |
| E-2  | Notebook   | DELL      | Vostro 3400    | N/A        | N/A  |  |
| E-3  | Mobile Phone   | XiaoMi    | Redmi K70      | C33018fb   | N/A  |  |
| E-4  | 5.1 Channel Dolby<br>Atmos Sound Bar<br>with Wireless<br>Subwoofer | TCL       | Q65K           | N/A        | N/A  |  |
| C-1  | USB Cable  | N/A       | 100cm          | N/A        | N/A  |  |
| C-2  | Fiber OpticCable   | N/A       | 150cm          | N/A        | N/A  |  |
| C-3  | HDMI Cable   | N/A       | 150cm          | N/A        | N/A  |  |

Note:

- 1) The support equipment was authorized by Declaration of Confirmation.
- 2) For detachable type I/O cable should be specified the length in cm in [Length] column.

# 2.8. ENVIRONMENTAL CONDITIONS FOR TESTING

| Test Item  | Temperature (°C) | Relative Humidity (%) | Test Voltage | Tested by |
|--|------------------|-----------------------|--------------|-----------|
| Conducted Emission on AC<br>Mains                                | 24.2             | 56.0                  | 1006         | Rick Zou  |

# 3. EMC TEST

# 3.1. Conducted Emission on AC Mains Measurement

#### <u>Limit</u>

Operating frequency band. In case the emission fall within the restricted band specified on Part 207(a) and RSS-Gen 8.8 limit in the table below has to be followed.

| FREQUENCY (MHz) | Conducted Emission limit (dBuV) |           |  |
|-----------------|---------------------------------|-----------|--|
|                 | Quasi-peak                      | Average   |  |
| 0.15 - 0.5      | 66 - 56 *                       | 56 - 46 * |  |
| 0.5 - 5         | 56                              | 46        |  |
| 5 - 30          | 60                              | 50        |  |

Note:

- 1) The tighter limit applies at the band edges.
- 2) The limit of " \* " marked band means the limitation decreases linearly with the logarithm of the frequency in the range.

#### The following table is the setting of the receiver

| Receiver Parameters | Setting  |
|---------------------|----------|
| Attenuation         | 10 dB    |
| Start Frequency     | 0.15 MHz |
| Stop Frequency      | 30 MHz   |
| RBW                 | 9 kHz    |

## Test Procedure

- a) The EUT was 0.8 meters from the horizontal ground plane and 0.4 meters from the vertical ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipment's powered from additional LISN(s). The LISN provides 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- b) Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.
- c) I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- d) LISN at least 80 cm from nearest part of EUT chassis.
- e) For the actual test configuration, please refer to the related Item -EUT Test Photos.

## Test Setup

Note:

- 1) Support units were connected to the second LISN.
- 2) Both LISNs (AMN) are 80 cm from EUT and at least 80 from other units and other metal planes

#### **EUT OPERATING CONDITIONS**

The EUT was configured for testing in a typical fashion (as a customer would normally use it). The EUT has been programmed to continuously transmit during test. This operating condition was tested and used to collect the included data.

#### Test Results

## 3.2. Radiated Spurious Emission Measurement

## <u>Limit</u>

In any 100 kHz bandwidth outside the operating frequency band. In case the emission fall within the Restricted band specified on Part15.205 (a)&209(a) and RSS-247 3.3 limit in the table and according to ANSI C63.10-2013 and RSS-Gen below has to be followed.

#### LIMITS OF RADIATED EMISSION MEASUREMENT (0.009MHz - 1000MHz)

| Frequencies (MHz) | Field Strength (microvolt/meter) | Measurement Distance<br>(meters) |
|-------------------|----------------------------------|----------------------------------|
| 0.009~0.490       | 2400/F(kHz)                      | 300                              |
| 0.490~1.705       | 24000/F(kHz)                     | 30                               |
| 1.705~30.0        | 30                               | 30                               |
| 30~88             | 100                              | 3                                |
| 88~216            | 150                              | 3                                |
| 216~960           | 200                              | 3                                |
| Above 960         | 500                              | 3                                |

#### LIMITS OF RADIATED EMISSION MEASUREMENT (1GHz-25 GHz)

| FREQUENCY (MHz) | (dBuV/m) (at 3M) |         |  |
|-----------------|------------------|---------|--|
|                 | PEAK             | AVERAGE |  |
| Above 1000      | 74               | 54      |  |

Notes:

- 1) The limit for radiated test was performed according to FCC PART 15C.
- 2) The tighter limit applies at the band edges.
- 3) Emission level (dBuV/m)=20log Emission level (uV/m).

#### LIMITS OF RESTRICTED FREQUENCY BANDS

For FCC:

| FOR FUC:          |                     |                 |                 |
|-------------------|---------------------|-----------------|-----------------|
| FREQUENCY (MHz)   | FREQUENCY (MHz)     | FREQUENCY (MHz) | FREQUENCY (GHz) |
| 0.090-0.110       | 16.42-16.423        | 399.9-410       | 4.5-5.15        |
| 0.495-0.505       | 16.69475-16.69525   | 608-614         | 5.35-5.46       |

| Start ~ Stop Frequency | 30MHz~1000MHz / RB 120kHz for QP        |  |

## Test Procedure

- a) The measuring distance of 3 m shall be used for measurements at frequency 0.009MHz up to 1GHz, and above 1GHz.
- b) The EUT was placed on the top of a rotating table 0.8 meters (above 1GHz is 1.5 m) above the ground at a 3-meter anechoic chamber test site. The table was rotated 360 degrees to determine the position of the highest radiation.
- c) The height of the equipment shall be 0.8 m(above 1GHz is 1.5 m); the height of the test antenna shall vary between 1 m to 4 m. horizontal and vertical polarizations of the antenna are set to make the measurement.
- d) The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then QuasiPeak detector mode re-measured.
- e) If the Peak Mode measured value compliance with and lower than Quasi Peak Mode Limit, the EUT shall be deemed to meet QP Limits and then no additional QP Mode measurement is performed.
- f) For the actual test configuration, please refer to the related Item –EUT Test Photos.

#### Note:

Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axes. The worst-case emissions were reported.

#### **DEVIATION FROM TEST STANDARD**

No deviation.

## Test Setup

1. Radiated Emission Test-Up Frequency Below 30MHz

2. Radiated Emission Test-Up Frequency 30MHz~1GHz

3. Radiated Emission Test-Up Frequency Above 1GHz

## **EUT OPERATING CONDITIONS**

The EUT tested system was configured as the statements of 2.5 Unless otherwise a special operating condition is specified in the follows during the testing.

#### Test Result

## 3.3. Conducted Spurious Emissions Measured in 100 kHz Bandwidth Measurement

#### <u>Limit</u>

According to FCC section 15.247(d) and RSS-247 5.5, in any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement.

#### Test Procedure

| Spectrum Parameter                    | Setting                          |  |  |
|---------------------------------------|----------------------------------|--|--|
| Detector                              | Peak                             |  |  |
| Start/Stop Frequency                  | 30 MHz to 10th carrier harmonic  |  |  |
| RB / VB (emission in restricted band) | 100 KHz/300 KHz                  |  |  |
| Trace-Mode:                           | Max hold                         |  |  |
| For Band edge                         |                                  |  |  |
| Spectrum Parameter                    | Setting                          |  |  |
| Detector                              | Peak                             |  |  |
| Start/Stop Frequency                  | Lower Band Edge: 2327 – 2427 MHz |  |  |
|                                       | Upper Band Edge: 2447 – 2547 MHz |  |  |
| RB / VB (emission in restricted band) | 100 KHz/300 KHz                  |  |  |
| Trace-Mode:                           | Max hold                         |  |  |

#### Test Configuration

The EUT is connected to the Spectrum Analyzer; the RF load attached to the EUT antenna terminal is 500hm; the path loss as the factor is calibrated to correct the reading. Make the measurement with the spectrum analyzer's resolution bandwidth (RBW) = 100 kHz. In order to make an accurate measurement, set the span greater than RBW.

#### **EUT OPERATION CONDITIONS**

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

#### Test Results

# **3.4. Carrier Frequency Separation Measurement**

#### <u>Limits</u>

Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater. Alternatively, frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW.

| Spectrum Parameter | Setting   |  |
|--------------------|---|--|
| Attenuation        | Auto  |  |
| Span Frequency     | > 20 dB Bandwidth or Channel Separation                 |  |
| RBW                | 30 kHz (20dB Bandwidth) / 30 kHz (Channel Separation)   |  |
| VBW                | 100 kHz (20dB Bandwidth) / 100 kHz (Channel Separation) |  |
| Detector           | Peak  |  |
| Trace              | Max Hold  |  |
| Sweep Time         | Auto  |  |

#### Test Procedure

a. The transmitter output (antenna port) was connected to the spectrum analyser in peak hold mode.

b. The resolution bandwidth of 30 kHz and the video bandwidth of 100 kHz were utilised for 20 dB bandwidth measurement.

c. The resolution bandwidth of 30 kHz and the video bandwidth of 100 kHz were utilised for channel separation measurement.

#### TEST SETUP

#### **EUT OPERATION CONDITIONS**

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

#### Test Results

## **3.5. Number of Hopping Frequency Measurement**

<u>Limits</u>

| Frequency Range (MHz) | Limit |
|-----------------------|-------|
| 2400-2483.5           | ≥15   |

| Spectrum Parameter | Setting                    |
|--------------------|----------------------------|
| Attenuation        | Auto                       |
| Span Frequency     | > Operating FrequencyRange |
| RBW                | 300KHz                     |
| VBW                | 300KHz                     |
| Detector           | Peak                       |
| Trace              | Max Hold                   |
| Sweep Time         | Auto                       |

#### Test Procedure

a. The EUT was directly connected to the spectrum analyzer and antenna output port as

show in

the block diagram below.

b. Spectrum Setting: RBW= 300KHz, VBW=300KHz, Sweep time = Auto.

#### TEST SETUP

#### **EUT OPERATION CONDITIONS**

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

#### Test Results

## 3.6. Time of Occupancy Measurement

#### <u>Limits</u>

| Frequency Range (MHz) | Limit  |
|-----------------------|--------|
| 2400-2483.5           | 0.4sec |

#### Test Procedure

a. The transmitter output (antenna port) was connected to the spectrum analyzer.

b. Set RBW =1MHz/VBW =3MHz.

c. Use a video trigger with the trigger level set to enable triggering only on full pulses.

d. Sweep Time is more than once pulse time.

e.Set the center frequency on any frequency would be measure and set the frequency span to zero span.

f. Measure the maximum time duration of one single pulse.

g. Set the EUT for DH5, DH3 and DH1 packet transmitting.

h. Measure the maximum time duration of one single pulse.

i. DH5 Packet permit maximum 1600/79/6 = 3.37 hops per second in each channel (5 time slots RX, 1 time slot TX). So the dwell time is the time duration of the pulse times  $3.37 \times 31.6 = 106.6$  within 31.6 seconds.

j. DH3 Packet permit maximum 1600 / 79 / 4 = 5.06 hops per second in each channel (3 time slots RX, 1 time slot TX). So he dwell time is the time duration of the pulse times  $5.06 \times 31.6 = 160$  within 31.6 seconds.

k. DH1 Packet permit maximum 1600 / 79 / 2 = 10.12 hops per second in each channel (1 time slot RX, 1 time slot TX). So the dwell time is the time duration of the pulse times  $10.12 \times 31.6 = 320$  within 31.6 seconds.

#### TEST SETUP

#### EUT OPERATION CONDITIONS

The EUT tested system was configured as the statements of 2.4 Unless otherwise a special operating condition is specified in the follows during the testing.

#### <u>Test Results</u>

## 3.7. 20dB BANDWIDTH Measurement

#### <u>Limits</u>

| Frequency Range (MHz) | Limit |
|-----------------------|-------|
| 2400-2483.5           | /     |

| Spectrum Parameter | Setting   |  |
|--------------------|---|--|
| Attenuation        | Auto  |  |
| Span Frequency     | > Measurement Bandwidth or Channel Separation           |  |
| RBW                | 30 kHz (20dB Bandwidth) / 30 kHz (Channel Separation)   |  |
| VBW                | 100 kHz (20dB Bandwidth) / 100 kHz (Channel Separation) |  |
| Detector           | Peak  |  |

## **3.9. Maximum Conducted Output Power Measurement**

<u>Limits</u>

| Section                        | Test Item       | Limit           | Frequency Range<br>(MHz) |
|--------------------------------|-----------------|-----------------|--------------------------|
| 15.247 (b)(3)                  | Output<br>Power | 1 watt or 30dBm | 2400-2483.5              |
| RSS-247 5.4(d)<br>RSS-Gen 6.12 | EIRP            | 36dBm           | 2400-2483.5              |

## Test Procedure

Some regulatory agencies permit the maximum conducted (average) output power to be measured as an alternative to the maximum peak conducted output power for determining compliance to the limit. When this option is exercised, the measured power is to be referenced to the OBW rather than to the DTS bandwidth (see 11.2 for definitions and 6.9.2 for measurement guidance).

When using a spectrum analyzer or EMI receiver to perform these measurements, it shall be capable of utilizing a number of measurement points in each sweep that is greater than or equal to twice the span / RBW, to set a bin-to-bin spacing of  $\leq$  RBW / 2 so that narrowband signals are not lost between frequency bins. If possible, configure or modify the operation of the EUT so that it transmits continuously at its maximum power control level (see 11.6).

The intent is to test at 100% duty cycle; however, a small reduction in duty cycle (to no lower than 98%) is permitted, if required by the EUT for amplitude control purposes. Manufacturers are expected to provide software to the test laboratory to permit such continuous operation. If continuous transmission (or at least 98% duty cycle) cannot be achieved because of hardware limitations (e.g., overheating), the EUT shall be operated at its maximum power control level, with the transmit duration as long as possible, and the duty cycle as high as possible during which sweep triggering/signal gating techniques may be used to perform the measurement over the transmission duration.

Measurement using a power meter (PM):

1. Method AVGPM:

Method AVGPM is a measurement using an RF average power meter, as follows:

a) As an alternative to spectrum analyzer or EMI receiver measurements, measurements may be performed using a wideband RF power meter with a thermocouple detector or equivalent if all of the conditions listed below are satisfied:

1) The EUT is configured to transmit continuously, or to transmit with a constant duty cycle. 2) At all times when the EUT is transmitting, it shall be transmitting at its maximum power control level.

3) The integration period of the power meter exceeds the repetition period of the transmitted signal by at least a factor of five.

b) If the transmitter does not transmit continuously, measure the duty cycle, D, of the transmitter output signal as described in 11.6.

c) Measure the average power of the transmitter. This measurement is an average over both the ON and OFF periods of the transmitter.

d) Adjust the measurement in dBm by adding [10 log (1 / D)], where D is the duty cycle.

2. Method AVGPM-G:

Method AVGPM-G is a measurement using a gated RF average power meter. Alternatively, measurements may be performed using a wideband gated RF power meter provided

that the gate parameters are adjusted such that the power is measured only when the EUT is transmitting at its maximum power control level. Because the measurement is made only during the ON time of the transmitter, no duty cycle correction factor is required.

## TEST SETUP

#### **EUT OPERATION CONDITIONS**

The EUT tested system was configured as the statements of 2.5 Unless otherwise a special operating condition is specified in the follows during the testing.

#### Test Results

## 3.10. ANTENNA REQUIREMENT

According to the manufacturer declared, the EUT has PIFA Antenna, the directional gain of antenna is Bluetooth antenna Gain: 2.50 dBi;, and the antenna connector is designed with a reverse polarity socket and does not consider replacement. Therefore, the EUT is considered sufficient to comply with the provision.

## EUT ANTENNA

The PIFA Antenna. It complies with the standard requirement.
