

Declaration Letter

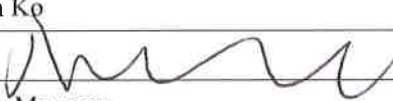

Transmission System FCC ID: 2AKWYFBP205

We, Dynascan Technology Corp., would like to declare below.

The module itself is supplied to specific hosts, and the ID cannot be placed due to the limitation of its own space, so it can only be placed outside the host, at the same time the user manual has an instruction guide for labeling, and it will be checked before installation.

The module vendor is a specific host supplier, so when the host supplier is integrated, due to the power supply method is different, the spurious emission and output power will be verified, so apply for Class II again. In addition, this host vendor is only used for display with mobile condition (RF exposure), so MPE conditions are generally used. If host vendors have portable changes, or collocate use with the module, SAR Class II will be evaluated.

Sincerely,

Company (Applicant):	Dynascan Technology Corp.
