

#### **Appendix A: RF Exposure; IC RSS-210 §14**

Per the 17 July 2002 TCB exclusion list, the power threshold for TCB SAR exclusion at an antenna distance greater than or equal to 2.5 cm is 49 mW. The max conducted power of the EUT is 45 mW, and the antenna in the device is greater than 2.5 cm from the user's body. Therefore, SAR evaluation is not required.

The user manual shall explicitly state that the printer side of the device must face away from the user's body.
