

# FCC Test Report

## FCC Part 15.247 for FHSS systems/ CANADA RSS-210

FOR:

MODEL #: R8-Model 2, SPS880

TRIMBLE NAVIGATION LTD.,  
935 STEWART DR.  
P.O BOX 3642  
SUNNYVALE, CA 94088-3642  
U.S.A

FCC ID: Q23 31307 / 09EQ2426-SK  
IC ID: 1756A-50158

TEST REPORT #: EMC\_1098\_2005\_BLUETOOTH  
DATE: DECEMBER 05, 2005

TTI-P-G 081/94-A0

Accredited according to ISO/IEC 17025

Bluetooth Qualification  
Test Facility  
(BQTF)

FCC listed # 101450

IC recognized # 3925

**CETECOM Inc.**

411 Dixon Landing Road • Milpitas, CA 95035 • U.S.A.

Phone: + 1 (408) 586 6200 • Fax: + 1 (408) 586 6299 • E-mail: [info@cetecomusa.com](mailto:info@cetecomusa.com) • <http://www.cetecom.com>

CETECOM Inc. is a Delaware Corporation with Corporation number: 2113686  
Board of Directors: Dr. Harald Ansorge, Dr. Klaus Matkey, Hans Peter May

## **TABLE OF CONTENTS**

|          |                                                                       |           |

Lothar Schmidt  
Test Lab Manager

The test results of this test report relate exclusively to the test item specified in Identification of the Equipment under Test. The CETECOM Inc. USA does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item. The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of the CETECOM Inc USA.

## **2 Administrative Data**

### **2.1 Identification of the Testing Laboratory Issuing the EMC Test Report**

|                               |                                                        |
|-------------------------------|--------------------------------------------------------|
| Company Name:                 | CETECOM Inc.                                           |
| Department:                   | EMC                                                    |
| Address:                      | 411 Dixon Landing Road<br>Milpitas, CA 95035<br>U.S.A. |
| Telephone:                    | +1 (408) 586 6200                                      |
| Fax:                          | +1 (408) 586 6299                                      |

| Manufacturers Address: | <b>935 Stewart Dr.<br/>P.O. Box 3642</b> |
| City/Zip Code          | <b>Sunnyvale 94088-3642</b>              |
| Country                | <b>USA</b>                               |

### **3 Equipment under Test (EUT)**

#### **3.1 Identification of the Equipment under Test**

|                        |                                                                                                                     |
|------------------------|---------------------------------------------------------------------------------------------------------------------|
| Marketing Name:        | <b>R8-MODEL 2, SPS880</b>                                                                                           |
| Description:           | <b>GPS Receiver with Bluetooth Device and Cellular<br/>Mobile GSM (824-849 MHz) PCS Device (2 GHz)<br/>Receiver</b> |
| Model No:              | <b>R8-MODEL 2, SPS880</b>                                                                                           |
| FCC ID:                | <b>Q23 31307 / 09EQ2426-SK</b>                                                                                      |
| IC ID:                 | <b>1756A-50158</b>                                                                                                  |
| Frequency Range:       | <b>2400-2483.5MHz</b>                                                                                               |
| Type(s) of Modulation: | <b>GFSK</b>                                                                                                         |
| Number of Channels:    | <b>79</b>                                                                                                           |
| Antenna Type:          | <b>INTERNAL</b>                                                                                                     |
| Output Power:          | <b>0.0019W CONDUCTED @ 2480MHz</b>                                                                                  |

#### **4 Subject Of Investigation**

##### ***FCC:***

FCC ID#: JUP-50158-R8, applies to previous R8 with different BT module. This ID isn't being permissive changed, but will be replaced on the label with the BT module ID (Q23 31307) and the GPRS module ID (O9EQ2426-SK).

##### ***INDUSTRY CANADA:***

We are requesting a permissive change to 1756A-50158, which currently is based on the previous version of the R8 (has different digital and GPS electronics) with a different BT module, but with the same GPRS module. We will continue to ship both the existing R8 and the new R8-Model 2 (also called SPS880), all with the same IC ID: 1756A-50158.

##### ***SUMMARY:***

This report contains Full testing on the Bluetooth Module (testing was performed on a stand-alone module in a testjig) as per FCC rules Part 15.247 of Title 47 of the Code of Federal Regulations and Industry Canada rules RSS210.

This report also contains tests that were performed on the R8-Model 2, SPS880 with the new Bluetooth Module, new CPU (MPC5200 CPU), and a second Maxwell V ASIC (GPS processing chip).

##### ***The following tests were performed on the R8-Model 2, SPS880:***

- 30MHz – 25GHz RADIATED TRANSMITTER EMISSIONS as per FCC15.247 and RSS210 (Co-Location with Bluetooth and GPRS transmitting simultaneously)
- 30MHz – 25GHz RADIATED RECEIVER EMISSIONS as per RSS210 (with R8-Model 2, SPS880 in receive mode)
- 150KHz-30MHz AC POWERLINE CONDUCTED EMISSIONS as per FCC15.247 and RSS210 (Co-Location with Bluetooth and GPRS transmitting simultaneously)

The objective of the measurements done by Cetecom Inc. was to measure the performance of the EUT as specified by requirements listed in FCC rules Part 15.247 of Title 47 of the Code of Federal Regulations and Industry Canada rules RSS210.

## 5 Measurements For Bluetooth Module

### 5.1 MAXIMUM PEAK OUTPUT POWER § 15.247 (RADIATED)

#### 5.1.1 LIMIT SUB CLAUSE § 15.247 (b) (1) (2) (3) (4)

| Frequency range | RF power output |
|-----------------|-----------------|
| 2400-2483.5 MHz | 36dBm EIRP      |

\*limit is based upon antenna gain of less than or equal to 6dBi.

#### 5.1.2 RESULTS:

| TEST CONDITIONS         |                      | MAXIMUM PEAK OUTPUT POWER (dBm) |          |          |
|-------------------------|----------------------|---------------------------------|----------|----------|

## 5.6 TIME OF OCCUPANCY (DWELL TIME)

### 5.6.1 LIMIT SUB CLAUSE § 15.247 (a) (1) (i) (ii) (iii)

| FREQUENCY RANGE | AVERAGE TIME OF<br>OCCUPANCY PER<br>31.6 SECONDS (LIMIT) |
|-----------------|----------------------------------------------------------|
| 2400-2483.5     | 0.4 SECONDS                                              |

### 5.6.2 RESULTS:

| TEST CONDITIONS         |                      | TIME OF OCCUPANCY IN 31.6 SECONDS |           |           |
|-------------------------|----------------------|-----------------------------------|-----------|-----------|
| PACKET TYPE             |                      | DH1                               | DH3       | DH5       |
| T <sub>nom</sub> (23)°C | V <sub>nom</sub> VDC | 0.1338 Sec                        | 0.271 Sec | 0.311 Sec |

**(DH1)**

The system makes worst case 1600 hops per second or 1 time slot has a length of 625μs with 79 channels. A DH1 Packet need 1 time slot for transmitting and 1 time slot for receiving. Then the system makes worst case 800 hops per second with 79 channels. So you have each channel 10.13 times per second and so for 31.6 seconds you have 320.108 times of appearance.

Each Tx-time per appearance is 417.84μs.

So we have  $320.108 * 417.84\mu s = 133.8ms$  per 31.6 seconds.

Date: 02.DEC.2005 16:18:03

**(DH3)**

A DH3 Packets need 3 time slots for transmit and 1 for receiving, then the system makes worst case 400 hops per second with 79 channels. So you have each channel 5.1 times per second and so for 31.6 seconds you have 161.16 times of appearance.

Each Tx-time per appearance is 1.679ms.

So we have  $161.16 * 1.679\text{ms} = 271\text{ms}$  per 31.6 seconds.

Date: 02.DEC.2005 16:19:09

**So we have  $106.176 * 2.93\text{ms} = 311\text{ms}$  per 31.6 seconds.**

Date: 02.DEC.2005 16:21:11

## **5.7 CONDUCTED SPURIOUS EMISSIONS**

### **5.7.1 LIMIT SUB CLAUSE § 15.247 (d)**

**In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).**

\*PEAK LIMIT= 74dBuV

\*AVG. LIMIT= 54dBuV

#### NOTE:

1. The radiated emissions were done with different settings, using the relevant pre-amplifiers for the relevant frequency ranges. This is the reason that the graphs show different noise levels. In the range between 3 and 25 GHz very short cable connections to the antenna was used to minimize the noise level.

2. All measurements are done in peak mode using an average limit , unless specified with the plots.

#### Results for the radiated measurements below 30MHz according § 15.33

| Frequency    | Measured values                       | Remarks                                   |
|--------------|---------------------------------------|-------------------------------------------|
| 9KHz – 30MHz | No emissions found, caused by the EUT | This is valid for all the tested channels |

## 5.10 RECEIVER SPURIOUS RADIATION § 15.209/RSS210

### 5.10.1 LIMITS

| Frequency (MHz) | Field strength ( $\mu\text{V/m}$ ) | Measurement distance (m) |
|-----------------|------------------------------------|--------------------------|
| 0.009 - 0.490   | 2400/F (kHz)                       | 300                      |
| 0.490 - 1.705   | 24000/F (kHz)                      | 30                       |
| 1.705 - 30.0    | 30                                 | 30                       |
| 30 - 88         | 100                                | 3                        |
| 88 - 216        | 150                                | 3                        |
| 216 - 960       | 200                                | 3                        |
| above 960       | 500                                | 3                        |

#### **NOTE:**

1. The radiated emissions were done with different settings, using the relevant pre-amplifiers for the relevant frequency ranges. This is the reason that the graphs show different noise levels. In the range between 3 and 25 GHz very short cable connections to the antenna was used to minimize the noise level.
2. All measurements are done in peak mode using a quasi-peak or average limit , unless specified with the plots.

## 5.10.2 RESULTS

**30MHz – 1GHz**

**Antenna: vertical**

| Start Frequency | Stop Frequency | Detector | Meas. Time | RBW     | VBW     |

## **6 Measurements For R8-MODEL 2, SPS880**

### **6.1 CO-LOCATION**

All Co-location testing was performed with the EUT transmitting in the PCS band (1880MHz) and the EUT transmitting in Bluetooth mode(2402MHz).

These channels were deemed worst case due to there EIRP readings. All testing was performed using FCC 15.247 procedures/limits.

The attached graph (6.1.1) reflects peak measurements. If peak measurements exceeded the specified peak limits, additional quasi peak measurements have been conducted (if required by the standard). The quasi peak test result is then reflected in the result table below the graph, too.

## 6.1.1 RESULTS (PCS AND BLUETOOTH)

**30MHz – 1GHz**

**Antenna: vertical**

| Start Frequency | Stop Frequency | Detector | Meas. Time | RBW     | VBW     |
|-----------------|----------------|----------|------------|---------|---------|
| 30MHz           | 1GHz           | Max Peak | Coupled    | 100 KHz | 100 KHz |

**Note: Peak Reading vs. Quasi-Peak limit**

| Frequency | Max Peak  | Quasi-peak | Limit   | Margin  |
|-----------|-----------|------------|---------|---------|
| 43.6 MHz  | 41.22dBuV | 36.22dBuV  | 40 dBuV | -3.78dB |

**30MHz – 1GHz**  
**Antenna: horizontal**

| Start Frequency | Stop Frequency | Detector | Meas. Time | RBW     | VBW     |
|-----------------|----------------|----------|------------|---------|---------|
| 30MHz           | 1GHz           | Max Peak | Coupled    | 100 KHz | 100 KHz |

**Note: Peak Reading vs. Quasi-Peak limit**

**1-3GHz**

| Start Frequency | Stop Frequency | Detector | Meas. Time | RBW   | VBW   |
|-----------------|----------------|----------|------------|-------|-------|
| 1GHz            | 3GHz           | Max Peak | Coupled    | 1 MHz | 1 MHz |

**Note: The peaks above the limit line is the carrier freq of the Bluetooth and PCS transmitter.**

**Note: Peak Reading vs. Average limit**

### 3-18GHz

| Start Frequency | Stop Frequency | Detector | Meas. Time | RBW   | VBW   |
|-----------------|----------------|----------|------------|-------|-------|
| 3GHz            | 18GHz          | Max Peak | Coupled    | 1 MHz | 1 MHz |

**Note: Peak Reading vs. Average limit, see next page for Average Reading vs. Average limit**

### 3-18GHz

| Start Frequency | Stop Frequency | Detector | Meas. Time | RBW   | VBW   |
|-----------------|----------------|----------|------------|-------|-------|
| 3GHz            | 18GHz          | Max Peak | Coupled    | 1 MHz | 10 Hz |

**Note: Average Reading vs. Average limit**

**18-25GHz**

| Start Frequency | Stop Frequency | Detector | Meas. Time | RBW   | VBW   |
|-----------------|----------------|----------|------------|-------|-------|
