

American Telecommunications Certification Body Inc.
6731 Whittier Ave, McLean, VA 22101

April 27, 2004

RE: Benq Corporation

FCC ID: JVP57P30

I have a few comments on this Application.

- 1.) The Part 24 Schematics and Block Diagram indicate that this device contains a Bluetooth device. If a Bluetooth transmitter will be supplied with this equipment, it shall be Certified under 15.247 of the Rules and be tested with the Part 24 GSM transmitter. Moreover, all Bluetooth transmitters require Certification under 15.247 of the Commission's rules. Since this device is a Cellphone with built-in Bluetooth transmitter, a Composite Application under a single FCC ID will have to be filed. Please upload all Exhibits normally associated with any 15.247 transmitter including Bluetooth schematics, block diagram, and a separate Test Report addressing just 15.247; a Bluetooth operational description, and a corrected Form 731. The Manual must have all the additional language required for any Part 15 device including 15.19(a)(3) and 15.21.
- 2.) According to your response to my questions of March 29, this equipment may be attached to a computer using cabling supplied by the manufacturer. This may make this a Computer Peripheral and subject to either the DoFC or Part 15B Certification procedure as provided in 15.101. Has this device been tested as a Computer Peripheral using the data cable supplied by the manufacturer?
- 3.) This is a Class 10 GPRS transmitter. Can timeslots of more than 1:8 be used while sending data with the equipment body worn or lap held? If so additional SAR testing might be required. If not, warnings to the end user should be provided in the Manual. Please review.
