

Product Operation Description of PL7802

This product PL7802 is a wireless mouse, which has five buttons: left button, mid-button, fourth and fifth buttons. The mid-button (wheel) functions both as a wheel and a button. There is a low-power LED on Laser mouse. While the LED is flashing for low-battery indication, please change new battery for the Mouse.

The main function of PL7802 is modulating pressing keys message, transmitting RF signal to associated receiver. PL7802 has two channels. The operation frequency range is 26.96 to 27.28MHz.

The “CONNECT” key on PL7802 is used to setup of the wireless link between the mouse and its receiver at first time of use or while changing the battery.

While the “CONNECT” key of the receiver is pressed, the indicator on the receiver will light on and the receiver is successfully prepared for connection.

Then press “CONNECT” key of PL7802, the Receiver connection indicator light goes off, the Mouse is working.

To setup the connection between the mouse and the receiver, place the receiver at least 20cm (8 inches) away from other electronics devices, such as monitor and external storage drives.
