

*1. Device photos seem to show two different antennas. Please submit list of antenna options and SAR data as needed.*

The SAR report was revised to correct this discrepancy. The only antenna tested and provided with this device is a whip antenna p/n ACC-145.

*2. External photos exhibit and users manual shows different belt-clip than shown in SAR report. Manual does not list leather-case and swivel. Please submit SAR data for other belt-clip options.*

The manual lists the carrying leather-case and swivel on Page 4 section 1: FCC RF exposure compliance. The carrying leather case with swivel (p/n ACC-304) was tested for SAR.

The Spring steel belt-clip (p/n 560-100-0017) may be used with the operating restrictions listed in the user's manual section 1, page 4: FCC RF Exposure compliance.

The user's manual and product description exhibits were revised.
