

A photograph of a green printed circuit board (PCB) with various electronic components. The board is rectangular with rounded corners and features a complex layout of copper traces. Key components include several integrated circuits (chips) of different sizes, some with labels like "L64790" and "L64791", and others with "TDA2030A" markings. There are also electrolytic capacitors, smaller surface-mount components, and a blue connector on the right edge. The board is placed on a light blue surface next to a black ruler with white markings, which shows the board's dimensions are approximately 100mm by 100mm.
