

Description of Change:

All models have identical electronics. The difference between the 610xB, 611xB, 613xB and 612xB readers is antenna size. The difference between “R” readers and “RW” readers is an expansion module plugged onto the “RW” readers that adds serial communication capabilities. The “K” readers have a keypad for direct data entry. The 613xB readers also have an auto-tune circuit which enables the device to adapt to variations in temperature, construction and mounting.
