RE: FCC ID: LJPRM-199\_ATCB003446 and LJPRM-106\_ATCB003447 Attention: Kare

I have a few comments on these Applications. Please note that further comments may arise in response to answers provided to the questions below.

LJPRM-106\_ATCB003447

- 1. Please note that the SAR report for the WLAN shows a maximum conducted power of 25.4dBm. the WLAN test report shows a maximum power level of 26.3dBm. The SAR report has to have the highest power level and there is a 0.9dB difference between the two maximums.
- 2. Please note that the revised SAR report appears to only have the WLAN data. Please provide the Cellphone data as well.
- Please note that probe SN1813 calibration data is dated Sept 2004. Please note that recent FCC interpretation is that SAR probes are to have one year or less calibration cycle. Please retest those configurations where probe serial number is 1813.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
