RF Exposure Compliance Statement

The maximum RF output power measured is 4dBm or 2.51mW. The maximum Gain of the inverted-F antenna used is only -1dBi.

The SAR limit would not be exceeded, even the entire maximum RF power output were absorbed by 1 gram of tissue, which is not possible with a typical RF circuit.

A handwritten signature in black ink, appearing to read "Zhs Wu for".

Dr. Alan Lane
Manager, R&TTE Division.
