FCC Compliance Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that the interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into a different outlet on a different circuit.
- Consult the dealer or an experience Radio/TV technician for help.

This unit was tested with shielded cables on the peripheral devices. Shielded cables must be used with the unit to insure compliance. The user is cautioned that any changes or modifications not expressly approved by Toshiba TEC Corporation could void the user's authority to operate the equipment.

Liability Disclaimer

Toshiba TEC Corporation takes steps to assure that the company's published engineering specifications and manuals are correct; however, errors do occur. Toshiba reserves the right to correct any such errors and disclaims any resulting liability. In no event shall Toshiba or anyone else involved in the creation, production, or delivery of the accompanying product (including hardware and software) be liable for any damages whatsoever (including, without limitation, damages for loss of business profits, business interruption, loss of business information, or other pecuniary loss) arising out of the use of or the results of use of or inability to use such product, even if Toshiba has been advised of the possibility of such damages.

Caution

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Precautions for the handling of Wireless

Communication Devices

This product is classified as “wireless equipment for stations of low-power data transmissions systems” under the Wireless Telegraphy Act, and does not require a radio transmission license. The law prohibits modification of the interior of this product.

■ Regulatory Information

This product must be installed and used in strict accordance with the manufacturer’s instructions as described in the user documentation that comes with the product. This device complies with the following radio frequency and safety standards.

Standards below are certified under the operation with the provided antenna. Do not use this product with other antennas.

□ Europe - EU Declaration of Conformity

Hereby, TOSHIBA TEC, declares that B-FV4D series are in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

□ USA-Federal Communications Commission (FCC)

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

CAUTION:

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

- (1) this device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the grantee of this device could void the user's authority to operate the equipment.

RF EXPOSURE WARNING:

This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. End-users and installers must be provide with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance.

☐ Canada - Industry Canada (IC)

This device complies with Canada licence-exempt RSS standard(s).

Operation is subject to the following two conditions:

- (1) this device may not cause interference, and
- (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil est conforme avec Industrie Canada exemptes de licence RSS standard(s).

Son fonctionnement est soumis aux deux conditions suivantes :

- (1) cet appareil ne doit pas causer d'interférence et
- (2) cet appareil doit accepter toute interférence, notamment les interférences qui peuvent affecter son fonctionnement.

Radio Frequency (RF) Exposure Information

The radiated output power of the Wireless Device is below the Industry Canada (IC) radio frequency exposure limits. The Wireless Device should be used in such a manner such that the potential for human contact during normal operation is minimized.

This device has been evaluated for and shown compliant with the IC Specific Absorption Rate ("SAR") limits when operated in portable exposure conditions.

Informations concernant l'exposition aux fréquences radio (RF)

La puissance de sortie émise par l'appareil de sans fil est inférieure à la limite d'exposition aux fréquences radio d'Industry Canada (IC). Utilisez l'appareil de sans fil de façon à minimiser les contacts humains lors du fonctionnement normal.

Ce périphérique a également été évalué et démontré conforme aux limites d'exposition aux RF d'IC dans des conditions d'exposition à des appareils mobiles (antennes sont supérieures à 20 cm à partir du corps d'une personne).

■ Approved Countries/Regions for use for the devices

This equipment is approved to the radio standard by the specific countries/regions. Please ask TOSHIBA TEC authorized dealer or service engineer.

■ Precaution for Use

- This product communicates with other devices by radio. Depending on the installation location, orientation, environment, etc., its communication performance may deteriorate or devices installed near by may be affected.
- Bluetooth® devices operate within the same radio frequency range and may interfere with one another. If you use Bluetooth® devices simultaneously, you may occasionally experience a less than optimal network performance or even lose your network connection.
- If you should experience any such problem, immediately turn off your Bluetooth® device.
- Keep away from a microwave.
Communication performance may deteriorate or a communication error may occur due to the radio emitted from a microwave.
- Do not use the product on a metal table or near a metal object.
Communication performance may be deteriorated.

* Bluetooth® is a registered trademark owned by Bluetooth SIG, Inc.

1 Introduction

Thank you for purchasing a Toshiba B-FV4T printer. This manual provides information about how to set up and operate your printer, load the media and the ribbon, and solve common problems.

1.1 Features

- **Various Connectivity Options** USB, Ethernet, RS-232C, Centronics
- **Easy Operation** One-button design for easy control
- **High Print Resolution** 203 dpi for GS models, 300 dpi for TS models
- **Fast Print Speed** Max 6 inches/sec for GS models, max 4 inches/sec for TS models
- **High Capacity** 5-inch diameter media roll and the 300-meter ribbon allow you to print labels without frequently replacing the media and ribbon
- **External Memory** The extra USB port allows you to use a USB flash drive for storage
- **Accessories** It is easier to complete tasks with accessories: full cutter, partial cutter, peeler, external media stand

1.2 Unpacking

Make sure all of the following items are included in your package.

Toshiba B-FV4T Printer

Toshiba B-FV4T
Quick Installation Guide

CD
Including document and software

USB Cable

Power Supply

AC Power Cord

1-inch Ribbon Core

0.5-inch Ribbon Core

When you receive the printer, open the package immediately and inspect for shipping damage. If you discover any damage, contact the shipping company and file a claim. Toshiba is not responsible for any damage incurred during shipping. Save all package materials for the shipping company to inspect.

Note If any item is missing, please contact your local dealer.

1.3 Understanding Your Printer

1.3.1 Front View

1.3.2 Rear View

Optional Interfaces

1.3.3 Interior View I

1.3.4 Interior View II

1.4 Printer Lights

1.4.1 Status Lights

Status lights can help you check printer's condition. The following tables show the blinking speed of status lights and the conditions they indicate.

Symbol	Blinking Speed	Blinking Interval
★	Blinking Fast	0.5 Second
⦿	Blinking	1 Second
◆	Blinking Slowly	2 Seconds

LED 1	LED 2	Description
Off	Off	The printer module is opened when the printer is turned on.
Green	Off	In the online mode.
★Green	Off	The printer is transmitting data.
◆Green	Off	In a pause state.
Green	Green	The printer is writing data to the flash or USB memory.
Green	⦿Green	The USB memory is being initialized. The process takes about 15 seconds.
Orange	Green	Paper jam.
Orange	Orange	Ribbon end or ribbon error (for thermal transfer models).
Orange	★Red	The media is out when the print data is sent to the printer.
Orange	Red	Paper end.
Red	Green	Communication error (RS-232C)
Red	★Green	Cutter error (with optional cutter).
Red	⦿Green	Flash ROM on the CPU board error or USB memory error
		An erase error occurred when formatting the USB memory.
		Unable to save files due to insufficient USB memory.
Red	◆Green	Command error.
Red	★Orange	Head high temperature error.
Red	⦿Orange	The printhead is broken.

Red	●Red	Cover (Thermal Head) open error.
Red	◆Red	The RTC battery is low. (If the printer has a built-in RTC)

1.4.2 System Mode

The system mode consists of status light color combinations. It contains a list of commands for you to select and run.

To enter the system mode and run the command, do the following:

1. Turn off the printer.
2. Press and hold the **FEED** button, and turn on the printer.
3. Both status lights will light up solid orange for a few seconds. Next, they turn to green shortly, and then turn to other colors.
4. When status lights show the color combination you need, release the **FEED** button immediately.
5. Press the **FEED** button to run the command.

The following table is the command list of the system mode.

LED 1	LED 2	Command
Green	Red	Transmissive Sensor Calibration (Section 3.1)
Green	Orange	Reflective Sensor Calibration (Section 3.1)
Red	Red	Restore the Printer to Factory Settings (Section 3.3)
Red	Orange	TPCL Auto Call Cancellation
Red	Green	Disable Checking RTC Battery Charge
Orange	Red	Disable BASIC Mode
Orange	Green	Self Test and Dump Mode (Section 3.2)

Note For information about TPCL Auto Call and BASIC Mode, please refer to B-FV4T technical manual.

2 Getting Started

This chapter describes how to set up your printer.

2.1 Attaching Power

1. Make sure the power switch is set to the **OFF** position.
2. Insert the power supply's connector into the printer power jack.
3. Insert the AC power cord into the power supply.
4. Plug the other end of the AC power cord into the wall socket.

Warning Do not plug the AC power cord with wet hands, or operate the printer and the power supply in an area where they may get wet. Serious injury may result from these actions!

2.2 Turning On/Off the Printer

When the printer is connected to the host (the computer), it is good to turn on the printer before turning on the host, and turn off the host before turning off the printer.

2.2.1 Turn On the Printer

1. To turn on the printer, turn on the **Power Switch** as below. The “I” is the **ON** position.

2. Both status lights will light up solid orange for a few seconds, and then LED 2 goes out, while LED 1 turns to solid green.

Note If you connect the printer to the network or insert a USB drive before turning on the printer, it will take longer for the printer to enter the online mode (LED 1 lights up solid green) after you turn it on.

2.2.2 Turn Off the Printer

1. Make sure LED 2 is off and LED 1 is solid green before turning off the printer.
2. To turn off the printer, turn off the **Power Switch** as below. The “O” is the **OFF** position.

Warning Do not turn off the printer during data transmission.

2.3 Loading Media

There are various types and sizes for the media roll. Load the applicable media to satisfy your need.

2.3.1 Preparing Media

The inside wound and outside wound media roll can be loaded into the printer the same way. In case the media roll is dirty during shipping, handling or storage, remove the outside length of the media. It helps avoid dragging adhesive and dirty media

between the printhead and platen roller.

2.3.2 Placing Media Roll

1. Open the top cover of the printer.

2. Press the switch lock on the **Media Roll Holders** to slide them outward, and place the media roll between the holders. Adjust the media roll so its print side is facing up, and make sure it is clamped tightly by the holders.

3. Push the **Module Release Latch** to open the printer module.

4. Press the **Lock** button on the **Media Guides** to slide them outward.

5. Pull the media until it reaches out of the printer.

6. Put the media under the **Media Shaft** and center it between the **Media Guides**.

7. Close the printer module and press down firmly at its both sides, until you hear a click.

2.3.3 Testing Media Feed

If you need to test the media feed, do this:

1. Turn on the printer, and press the **FEED** button to feed a label out of the printer.

2. To tear the media, pull the media gap against the **Tear Bar**.

2.3.4 Media Types

Your printer supports various media types, including non-continuous media, continuous media, and fanfold media. The following table provides details about them.

Media Type	Looks Like	Description
Non-Continuous Media		Non-continuous media is the typical media for bar code printing. Labels and tags are made of various materials, such as paper, fabric or cardstock, and are separated by gaps, holes, notches or black marks. Many labels are self-adhesive with liners, while some are linerless.     

Continuous Media

Continuous media does not have gaps, holes, notches or black marks. It allows you to print data anywhere on the media. A cutter may be used for splitting labels. Mostly it is used for direct thermal printing.

Fanfold Media

Fanfold media is in continuous form, but it can be used as non-continuous media, because its labels are separated by folds. Some fanfold media also has black marks or liners.

Note If you are using thermal transfer mode, please continue to Section 2.4, "Loading Ribbon."

2.4 Loading Ribbon

Ribbons are only required for thermal transfer printing. You can use a wax, wax-resin or resin ribbon. The type of the ribbon and the media should match to each other to get the proper print quality. The ribbon needs to be wider than or equal to the media to protect the printhead from wear.

2.4.1 Preparing Ribbon

Remove the wrapping and the protective film of the ribbon. You will find two pairs of ribbon cores in the printer package. One of them is for 0.5-inch inner diameter ribbon and the other is for 1-inch. Install the applicable pair into the ribbon supply roll and take-up roll.

2.4.2 Placing Ribbon Roll

1. Open the top cover of the printer.

2. Push the **Module Release Latch** to open the printer module.

3. Lift the printer module to reveal the **Supply Wheel**.

4. Do the following to install both rolls:

- To load the supply roll, align the notches on the left side and press the roll to the supply hub, and then press the right side of the roll to the hole.

- To load the take-up roll, align the notches on the left side and press the roll to the take-up hub, and then press the right side of the roll to the hole.

5. Pull the ribbon from the supply roll and tape it on the take-up roll.

6. Close the printer module and press down firmly at its both sides, until you hear a click.

7. Rotate the **Take-Up Wheel** to straighten the ribbon and reduce its wrinkles.

Note For the supply hub, the ribbon wind direction can be coated side in (CSI) or coated side out (CSO); for the take-up hub, the wind direction must be CSO.

3 Printer Operation

This chapter provides information about printer operation.

3.1 Media Sensor Calibration

You will want the printer to work properly before starting your print jobs. To do this, you need to calibrate the media sensor. Toshiba B-FV4T provides transmissive and reflective sensor calibration. Take the following steps to use them.

1. Make sure the media is properly loaded, the printer module is closed, and the printer's power switch is set to the **OFF** position.
2. Press and hold the **FEED** button, and turn on the printer.
3. Both status lights will light up solid orange for a few seconds. Next, they turn to green shortly, and then turn to other colors. Do one of the following to select the sensor:

- If you want to calibrate the transmissive sensor, when LED 1 turns to green and LED 2 turns to red, release the **FEED** button immediately.
- If you want to calibrate the reflective sensor, when LED 1 turns to green and LED 2 turns to orange, release the **FEED** button immediately.

4. Press the **FEED** button. The printer will feed 3-4 labels out and stop.

3.2 Self Test and Dump Mode

The printer can run a self test to print a configuration label, which helps you understand current settings of the printer.

3.2.1 Self Test

1. Turn off the printer.
2. Press and hold the **FEED** button, and turn on the printer.
3. Both status lights will light up solid orange for a few seconds. Next, they turn to green shortly, and then turn to other colors. When LED 1 turns to orange and LED 2 turns to green, release the **FEED** button.
4. Press the **FEED** button. The printer will print a configuration label.

Your configuration label should look like this:

B-FV4T-G PRINTER INFO.

```

3.2.2 Dump Mode

The printer will enter the **Dump** mode after running a self test. In this mode, characters are printed in hexadecimal codes, allowing users and engineers to debug the system.

To return to the online mode:

- Turn off the printer, and turn it on again.

3.3 Restore Your Printer to Factory Settings

Some problems can be solved by restoring the printer to its factory settings. Do the following to reset your printer.

1. Turn off the printer.
2. Press and hold the **FEED** button, and turn on the printer.
3. Both status lights will light up solid orange for a few seconds. Next, they turn to green shortly, and then turn to other colors. When both lights turn to red, release the **FEED** button immediately.
4. Press and hold the **FEED** button for 3 seconds and release it. Both status lights will blink red three times, and turn to solid orange for a few seconds. After that,

LED 2 goes out while LED 1 turns to solid green.

Note In step 4, if you do not hold the **FEED** button long enough, LED 2 will blink orange three times while LED 1 goes out. It means the printer is not reset.

3.4 Media Sensing

There are two media sensor types: transmissive and reflective. They are used for detecting specific media types.

3.4.1 Transmissive Sensor

The transmissive sensor is fixed and placed near the center of the media path. It is used for detecting gaps across the entire width of the label.

3.4.2 Reflective Sensor

The reflective sensor is movable within the entire width of the media. It detects gaps, notches and black marks not located at the center of the media.

Flip the media so the black-mark side is facing down to align with the sensor.

4 Maintenance

This chapter describes routine cleaning procedure.

4.1 Cleaning

To maintain print quality and prolong the printer's life, you need to perform some routine maintenance. Daily maintenance should be done for high volume printing, and weekly for low volume printing.

Warning Always turn off the printer before cleaning.

4.1.1 Printhead

It is essential to keep printhead clean if you want the best print quality. We strongly recommend that you clean the printhead when you load a new media roll. If the printer is operated in critical environment, or the print quality declines, you need to clean the printhead more frequently.

Keep in mind these things before you clean:

- Keep the water away in case of corrosion on heating elements.
- If you just finish printing, wait until the printhead cools down.
- Do not touch the printhead with bare hands or hard objects.

Cleaning steps:

1. Moisten a soft cloth or a cotton swab with ethyl alcohol.
2. Gently wipe the printhead in one direction. That is, wipe it only from left to right or vice versa. Do not wipe back-and-forth, in case dust or dirt attaches to the

printhead again.

Note Printhead warranty becomes void if printhead's serial number is removed, altered, defected, or made illegible, under every circumstance.

4.1.2 Media Housing

Use a soft cloth to clean the dust, dirt or debris built up on the **Media Roll Holders**, **Media Guides** and media path.

1. Moisten a soft cloth with ethyl alcohol.
2. Wipe the **Media Roll Holders** to clean dust.
3. Wipe the **Media Guides** to clean dust and dirt.
4. Wipe the media path to clean paper debris.

4.1.3 Sensor

Media sensors may not be able to detect the media correctly if it becomes dirty.

1. Moisten a soft cloth or a cotton swab with absolute ethyl alcohol.
2. Gently brush sensors to remove the dust away.
3. Use a dry cloth to clean the residue.

4.1.4 Platen Roller

The platen roller is also important for print quality. Dirty platen roller may damage the printhead. Clean the platen roller right away if the adhesive, dirt or dust accumulates on it.

1. Moisten a soft cloth with absolute ethyl alcohol.
2. Gently wipe the platen roller to remove the dust and adhesive.

4.2 Replacing RTC Battery

If your printer has a built-in real-time clock (RTC), you will find the RTC battery on the main board. The RTC battery keeps the RTC running when the printer is turned off, so the RTC can keep track of the current time. You can check the RTC battery charge from the status lights. If the RTC battery is low or out, you need to replace it with a new one.

Take the following steps to replace your RTC battery:

1. Turn on the printer.
2. Locate the battery on the main board.
3. Remove the old coin battery and install a new one.
4. Turn off the printer.

Warning Risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to the instructions.

5 Troubleshooting

This chapter provides the information about printer problems and solutions.

5.1 Printer Problems

The printer is not turned on

- Did you attach the AC power cord?
- Make sure the power supply's connector is inserted into the printer power jack.
- Check the power connection from the wall socket to the printer. Test the power cord and the socket with other electrical devices.
- Disconnect the printer from the wall socket, and connect it again.

The printer does not feed the media out

- The media is not loaded correctly. See Section 2.3, "Loading Media" to reload the media.
- If there is a paper jam, clear it.

I accidentally press the feed button while the printer module is opened

- Close the printer module and press the **FEED** button.

5.2 Media Problems

The media is out

- Load a new media roll.

The paper is jammed

- Open the printer and clear the jammed paper.
- Make sure the paper is held properly by the **Media Guides**.

The printing position is not correct

- Did you use the correct media type for printing?

- The media is not loaded correctly. See Section 2.3, “Loading Media” to reload the media.
- The media sensor needs to be calibrated. See Section 3.1, “Media Sensor Calibration” to calibrate the sensor.
- The media sensor is dirty. Clean the media sensor.

Nothing is printed

- The media is not loaded correctly. See Section 2.3, “Loading Media” to reload the media.
- The ribbon is not loaded correctly. See Section 2.4, “Loading Ribbon” to reload the ribbon.
- The print data might not be sent successfully. Make sure the interface is set correctly in the printer driver, and send the print data again.

The print quality is poor

- The printhead is dirty. Clean the printhead.
- The platen roller is dirty. Clean the platen roller.
- Adjust the print darkness, or lower the print speed.
- The media is incompatible for the ribbon. Use the compatible media instead.
- The media is incompatible for the printer. Use Toshiba-approved media roll instead.

5.3 Ribbon Problems

The ribbon is out

- Load a new ribbon roll.

The ribbon is broken

- Check the print darkness and adjust it if it is too high, and take the following steps to fix the broken ribbon:

1. Unload the ribbon supply roll and take-up roll from the printer.
2. Pull the ribbon from the supply roll so it overlaps the broken end of the take-up roll.
3. Tape the overlapped parts together.
4. Reload both rolls into the printer.

The ribbon is “printed out” with the media

- The ribbon is not loaded correctly. See Section 2.4, “Loading Ribbon” to reload the ribbon.
- The printhead temperature is too high. Reload the ribbon and print a configuration label to check the settings (see Section 3.2, “Self Test and Dump mode”). If the print darkness is very high, adjust it in printer preference, or reset your printer (see Section 3.3, “Restore Your Printer to Factory Settings”).

The ribbon is wrinkled

1. Make sure the ribbon is loaded correctly.
2. Rotate the **Take-Up Wheel** to straighten the ribbon.

5.4 Other Problems

There are broken lines in the printed label

- The ribbon is wrinkled. Adjust or reload the ribbon. Or, print a few labels until the wrinkled part goes away.
- The printhead is dirty. Clean the printhead.

An error occurred when writing data to the USB memory

- Did you insert the USB drive?
- Make sure the USB drive is plugged tightly into the port.
- The USB drive might be broken. Replace it with another one.

The printer is unable to save files due to insufficient USB memory

- Delete the files on your USB drive to free some space, or replace your USB drive with an empty one.

The cutter is experiencing issues

- If there is a paper jam, clear it.
- The cutter has become loose. Fix the cutter in position and tighten it.
- The cutter blade is not sharp anymore. Replace your cutter with a new one.

The printhead temperature is extremely high

- The printhead temperature is controlled by the printer. If it is extremely high, the printer will stop printing automatically, until the printhead is cool down. After that, the printer will resume printing automatically, if there is any unfinished print job.

The printhead is broken

- Contact your local dealer for assistance.

6 Specifications

This chapter provides specifications for the printer.

6.1 Printer

Model	B-FV4T-GS12-QM-R B-FV4T-GS12-CN-R	B-FV4T-TS12-QM-R B-FV4T-TS12-CN-R
Print method	Direct Thermal and Thermal Transfer	
Resolution	203 dpi (8 dots/mm)	300 dpi (12 dots/mm)
Media Alignment	Centered	
Operation Mode	Standard: Continuous mode , Tear-off mode Optional: Cutter mode , Peeler mode	
Sensor	Media Sensor: Gap Sensor (Transmissive, Fixed)	
	I-Mark Sensor (Reflective, Movable)	
	Head Open Switch	
	Ribbon Sensor	
Print Speed	2, 3, 4, 5, 6 inches/sec (50.8, 76.2, 101.6, 127, 152.4 mm/sec) 2 & 3ips for peel off mode	2, 3, 4 inches/sec (50.8, 76.2, 101.6 mm/sec) 2 & 3ips for peel off mode
Print Darkness	Darkness level: -10 ~ +10 Default: 0	
Max Printable Area	Length 999 mm x Width 108 mm	Length 999 mm x Width 105.7 mm
Non-Printable Area	Pitch Direction - Top: 1 mm, Bottom: 1 mm (excluding liner) Width Direction - Left: 1 mm, Right: 1 mm (excluding liner)	
Print Ratio	Average print ratio within 15 % or less (whole print layout area) Full width with 1mm pitch is required	
Interface	USB (Type A and Type B), Ethernet	
Optional Interface	RS-232C, Centronics (SPP Mode)	
Accessories	Peeler, Full Cutter, Partial Cutter, RTC, External Media Stand	
On-Board Memory	Standard Memory (Flash ROM): 16 MB	
	User Memory: 2 MB	
	Standard Memory (SDRAM): 32 MB	
External Memory	USB: Max 16 GB	
Panel	2 LED, 1 Button	
LED	1 st LED: Red and Green (Various Combinations: Orange)	
	2 nd LED: Red and Green (Various Combinations: Orange)	
Font	Standard: See the TEC Command Reference	
	Extended: Download with Printer Utility	

6.2 Media and Ribbon

Properties	Description
Media Size	Continuous Mode Length: 8 ~ 997 mm (including liner 10 ~ 999 mm) Width: 22.4 ~ 115 mm (including liner 25.4 ~ 118 mm) Tear-Off Mode Length: 8 ~ 997 mm (including liner 10 ~ 999 mm) Width: 22.4 ~ 115 mm (including liner 25.4 ~ 118 mm) Peel-Off Mode Length: 23.4 ~ 150.4 mm (including liner 25.4 ~ 152.4 mm) Width: 22.4 ~ 115 mm (including liner 25.4 ~ 118 mm) Cut Mode Length: 19.4 ~ 993 mm (including liner 25.4 ~ 999 mm) Width: 22.4 ~ 115 mm (including liner 25.4 ~ 118 mm) Max Roll Diameter Size: 127 mm (5 inches) Max Roll Diameter Size for External Media Stand: 216 mm (8.5 inches)
Media Type	Thermal Transfer Label Thermal Transfer Tag Direct Thermal Label Direct Thermal Tag Roll Paper (Inside Wound or Outside Wound) Fanfold Paper
Ribbon Size	Length: 100 m (ϕ Core Size: 0.5 inch), Max 300 m (ϕ Core Size: 1 inch) Width: 40~110 mm
Ribbon Type	Wax, Wax-Resin, Resin Coated Side In or Coated Side Out

6.3 Bar Code

Programming Language	TPCL	Non-TPCL
One Dimensional Bar Code	JAN8/EAN8	UPC-A
	JAN13/EAN13	UPC-E
	UPC-E	JAN/EAN
	EAN13+2 digits	CODE39
	EAN13+5 digits	CODE93
	CODE128 (with auto code selection)	CODE128
	CODE128 (without auto code selection)	GS1-128 (UCC/EAN128)
	CODE93	CODABAR (NW-7)
	UPC-E+2 digits	ITF
	UPC-E+5 digits	Industrial 2of5
	EAN8+2 digits	MSI
	EAN8+5 digits	UPC add-on code
	UPC-A	POSTNET
	UPC-A+2 digits	GS1 DataBar
	UPC-A+5 digits	Omnidirectional
	UCC/EAN128	GS1 DataBar Truncated
	POSTNET	GS1 DataBar Stacked
	RM4SCC	GS1 DataBar Stacked
	KIX CODE	Omnidirectional
	USPS Intelligent mail barcode	GS1 DataBar Limited
	MSI	GS1 DataBar Expanded
	Interleaved 2 of 5 (ITF)	GS1 DataBar Expanded Stacked
	CODE39 (standard)	
	NW7	
	CODE39 (full ASCII)	
	Industrial 2 of 5	
Two Dimensional Bar Code	QR Code	QR Code
	PDF417	PDF417 (including
	MicroPDF	MicroPDF)
	DataMatrix (ECC200) (FNC1 supported)	DataMatrix (ECC200)
	MaxiCode	GS1 DataMatrix
Composite Symbol	GS1 DataBar (Truncated)	MaxiCode
	GS1 DataBar Stacked	EAN-13 Composite (CC-A/CC-B)
	GS1 DataBar Stacked Omnidirectional	EAN-8 Composite (CC-A/CC-B)
	GS1 DataBar Limited	UPC-A Composite (CC-A/CC-B)
	GS1 DataBar Expanded	UPC-E Composite (CC-A/CC-B)
	GS1 DataBar Expanded Stacked	UPC-E Composite (CC-A/CC-B)
	UPC-A	GS1 DataBar Composite (CC-A/CC-B)
	UPC-E	

EAN-13	GS1 DataBar Truncated
EAN-8	Composite (CC-A/CC-B)
UCC/EAN-128 with CC-A	GS1 DataBar Stacked
or CC-B	Composite (CC-A/CC-B)
UCC/EAN-128 with CC-C	GS1 DataBar Expanded
	Stacked Composite
	(CC-A/CC-B)
	GS1 DataBar Expanded
	Composite (CC-A/CC-B)
	GS1 DataBar Stacked
	Omnidirectional
	Composite (CC-A/CC-B)
	GS1 DataBar Limited
	Composite (CC-A/CC-B)
	GS1-128 Composite
	(CC-A/CC-B/CC-C)

6.4 Electrical and Operating Environment

Properties	Range
Power Supply	Voltage: AC100 V ~ 240 V ± 10 % (full range) Frequency: 50-60 Hz ± 5 %
Power Consumption	90 W
Temperature	Operating: 5~40 °C Storage: - 40 ~ 60 °C
Humidity	Operating: 25 ~ 85 %RH (non-condensing) Storage: 10 ~ 90 %RH (non-condensing)

6.5 Physical Dimension

Dimension	Size and Weight
Size	W 221 mm x D 279.3 mm x H 182.8 mm
Weight	2.45 kg (excluding media and accessories)

6.6 Interfaces

This section provides information about IO port specifications for the printer.

6.6.1 USB

There are two common USB connectors. Typically, type A is found on hosts and hubs; type B is found on devices and hubs. The figure below shows their pinouts.

Pin	Signal	Description
1	VBUS	+5V
2	D-	Differential data signaling pair -
3	D+	Differential data signaling pair +
4	Ground	Ground

6.6.2 Ethernet

The Ethernet uses RJ-45 cable, which is 8P8C (8-Position 8-Contact). The figure below shows its pinout.

Pin	Signal
1	Transmit+
2	Transmit-
3	Receive+
4	Reserved
5	Reserved
6	Receive-
7	Reserved
8	Reserved

6.6.3 RS-232C

The RS-232C on the printer is DB9 female. It transmits data bit by bit in asynchronous start-stop mode. The figure below shows its pinout.

Pin	Signal	Description
1	N/A	Shorted to Pin 6
2	RxD	Receive
3	TxD	Transmit
4	N/A	No Connection
5	GND	Ground
6	N/A	Shorted to Pin 1
7	RTS	Request to Send
8	CTS	Clear to Send
9	+5V	Reserved for KDU (keyboard device unit)

Note Pin 9 is reserved for KDU. Do not connect it if you are using a computer as the host.

Host (DB9)			Printer (DB9)		
Signal	Description	Pin	Pin	Description	Signal
RxD	Receive	2	3	Transmit	TxD
TxD	Transmit	3	2	Receive	RxD
DTR	Data Terminal Ready	4	1	Data Set Ready	DSR
GND	Ground	5	5	Ground	GND
DSR	Data Set Ready	6	6	Data Terminal Ready	DTR
RTS	Request to Send	7	8	Clear to Send	CTS
CTS	Clear to Send	8	7	Request to Send	RTS

6.6.4 Centronics

The 36-pin Centronics on the printer uses parallel communication, and complies with IEEE 1284 compatibility mode (also called SPP, Standard Parallel Port). The figure below shows its pinout.

Pin	Signal Direction	Signal	Pin	Signal Direction	Signal
1	To Printer	/STROBE	11	From Printer	BUSY
2	To Printer	Data 1	12	From Printer	PE
3	To Printer	Data 2	13	From Printer	+5V
4	To Printer	Data 3	14-15	-	NC
5	To Printer	Data 4	16-17	Ground	GND
6	To Printer	Data 5	18	-	NC
7	To Printer	Data 6	19-30	Ground	GND
8	To Printer	Data 7	31	-	NC
9	To Printer	Data 8	32	From Printer	/FAULT
10	From Printer	/ACK	33-36	-	NC

Installation Manual for the B-FV704D-BLTH-QM-R Bluetooth Interface

WARNING!

1. Carefully read and follow all the instructions in this manual. Failure to do so could create safety hazards such as fire or electric shocks.
 - *Instructions in this manual must be followed when installing option kits or adding cables to avoid system failures and to insure correct performance and operation.*
 - *Failure to follow the manual's instructions or any unauthorized modifications, substitution or change to this product will void the product warranty.*
2. Before installing this option, be sure to turn off the power switch and disconnect the power adapter connector from the printer.

3. Take care not to trap or pinch your fingers or hands with the covers.
4. Before installing this option, remove the media from the printer.

1. APPLICABLE MODEL

This optional module is the Bluetooth interface, which is designed for the following models:

- B-FV4D Series

Remark:

This optional module complies with Bluetooth V2.1 + EDR standards.

Note:

This optional module and the B-FV700-WLAN-QM-R Wireless LAN Interface option cannot be installed at the same time.

2. PACKING LIST

All the following parts are supplied with the option. Make sure you have all the items shown listed below.

- Bluetooth Interface (1 pc.)

- M-3 P-Tite Screw (2 pcs.)

- Installation Manual (1 copy)

- RF Certification Label

3. INSTALLATION PROCEDURE

- 1) Turn off the printer power, disconnect the power plug from the AC outlet, and disconnect the AC adapter from the printer.
- 2) Place the printer on the soft cloth to prevent scratching the surface of the printer, and remove the 4 screws provided at the Bottom Cover.

- 3) Remove the Bottom Cover by removing the 6 connectors from the main board.

Connectors to be detached

Bottom Cover

4) Remove the Printer Cover.

5) Secure the Bluetooth Interface with the 2 screws provided (M-3 P-Tite screws).

**Note:**

When securing the interface, prevent the two harnesses from being trapped between the interface board and the printer frame.

6) Attach the Printer Cover.

Note: When fitting the Printer Cover, prevent the harness from being trapped between the covers.

- 7) Connect the harness connector to the connector "J15" (black) on the main board.

- 8) Return the 6 connectors to the original positions, which were removed in Step 3.

- 9) Fix the Bottom Cover by securing the 4 screws which were removed in Step 2.

Note: When fitting the Bottom Cover, prevent the harness from being trapped between the covers.

- 10) Peel off the backing sheet of the RF Certification Label and attach it to the position as shown below.

Note:

Be sure not to cover the contents described on the rating label when the RF Certification Label is attached to the upper right corner.

11) Close the Top Cover.

The installation is now completed.
